Borland's SideKick and PhoneLink the world, and double your

NEW VERSION 1.1

SideKick, The Macintosh Office Manager, now supports MacPlus (128K) and Finder 5.1 for the same low price—\$99.95. An upgrade is available from Borland for \$19.95. The upgrade is FREE if you purchased SideKick after 12/15/85. For more information, call (408) 438-8400.

Borland products include Turbo Pascal, Turbo Database Tools, Turbo Lightning, Turbo Graphics Tools, Turbo Tutor, Turbo GameWorks, Turbo Editor Tools, Reflex, The Analyst, SideKick, SideKick, The Macintosh Office Manager, Traveling SideKick, and SuperKey—all of which are trademarks or registered trademarks of Borland International, Inc. or Borland/Analyst, Inc.

clear your desk, connect you to productivity for only \$99.95

SideKick,® The Macintosh™ Office Manager,™ gets rid of antiques like desktop phone directories, calculators, calendars, notepads, clocks, adding machines, and similar clutter. Sweeps all that off your desk and into your Mac. You can now bring true desktop organization, information management, and telecommunications to your Mac and do all that *while you're running other programs.*

What PhoneLink™ does for you

In true multi-tasking style, PhoneLink automatically dials for you *even while your modem is in use* on some other task, like sending or receiving a file. This one cubic-inch piece of hardware plugs into your Mac's sound port and will dial all your phone numbers for you. You can install your PhoneLink in a few seconds, and take extra pleasure in the fact that it didn't cost you anything because it came free with your new SideKick.

What SideKick does for you

- Gives you a full-screen editor and mini-word processor that lets you jot down notes, create and edit files, and/or be used in conjunction with programs like MacWrite or MacPaint.
- Provides you with a telecommunications program that sends and receives data from any on-line network or

bulletin board while using other applications. (You need a modem for this feature.)

- Lets you tap into a full-featured financial and scientific calculator that will let you print out a paper tape of your work.
- Offers you a print spooler that prints any text file while you run other programs.
- Shows you an instant calendar—by day, week, or month—which you can also print out.
- Reminds you of important dates/times/appointments with a "things-to-do" file.
- Alerts you to engagements with a convenient alarm system.
- Tells you what you're spending in telephone charges by calculating the cost of every call to whatever area code or time zone.
- Keeps you aware of business and travel expenses.

- Gives you a credit card file that tracks entries, balances, and limits.
- Arms you with a report generator that prints out your mailing lists, calendar, or phone directory.
- Tells you the time with a sweep-hand analog clock.
- Gives you instant on-line "Help" with one mouse click.

Get both SideKick, The Macintosh Office Manager and PhoneLink for only \$99.95

SideKick for the Mac is an electronic leap that projects you and your Mac into the real world. But you're getting much more than that. You're getting SideKick, you're getting PhoneLink, and you're getting our legendary 60-day money-back guarantee.**

SideKick is not copy-protected. It will clear your desk and do miracles for your productivity—and do all that for only \$99.95.

“ Take my compliments as a user. When I see SideKick, I know I want it.

Jean-Louis Gassée, VP,
Product Development,
Apple Computer

SideKick is the first product for the Mac that begins to make real the promise of an electronic desktop.

Getting Started

92 Order out of Chaos

Danny Goodman

A big plus with the new Macintosh: the Hierarchical File System blazes a trail to a civilized and flexible organization of files within folders. Take a guided tour with this introduction.

Review

100 New Relations

Jim Heid

Looking for a data manager that's a good match for complex tasks? Consider three recent entries to the relational database field: Singular Software's *Interlace*, Eqtron's *MacBase*, and Blyth Software's *Omnis 3*.

108 Cutting Keystrokes

Danny Goodman

Affinity Microsystems' *Tempo* delivers a printout—or performs about any other procedure—at the touch of a single key with *macros*, automated sequences of keystrokes and mouse moves.

State of the Art

114 Tools for Thinking

Tom Meramaa and Daniel Farber

The next wave of microcomputer development is software that puts into practice the principles of expert systems. Neuron Data's *Nexpert* brings the technology to the Mac.

Hands On

122 Putting VideoWorks to Work

Erfert Nielson

Action speaks louder. Use Hayden's *VideoWorks* to move your audience with an animated business presentation.

Community

128 The Telecom Link

Tom Moran

Apple Computer talks to its dealers via AppleLink, a prototype of a truly user-friendly network that may soon reach the rest of us.

Departments

13 Personal Computer Games Come of Age

David Bunnell

25 Note Pad

Dean Gengle

A network observer predicts that on-line services won't catch on with the public until the services become as easy to use as *MacPaint*.

On the Cover

Apple's long-awaited Hierarchical File System lets you nest files within files. See "Order out of Chaos," page 92.

Database data. Shopping for database power? See the comparison table of six relational databases in "New Relations," page 98.

READYSETGO: The 1-2-3TM of Electronic Publishing.

Spreadsheets revolutionized number crunching. READYSETGO is doing the same for electronic publishing.

Its unique block design—a familiar spreadsheet concept—puts the power of professional document production where it belongs: at your desk. If you've ever produced a newsletter, brochure, ad or manual you'll appreciate the way READYSETGO reduces the tedium of document production—while saving you time and money.

1 Entering copy and graphics.

After creating a text block, you enter copy using READYSETGO's built-in editor or by importing text from any MacintoshTM program.

READYSETGO's powerful document editor makes text input a breeze. A self-contained desktop publisher, READYSETGO features a wide selection of professional typefaces, multiple font sizes and variable line spacing. And you may flow text over 40 page documents.

READYSETGO handles graphics just as easily. Create a picture block and paste in any image from the Scrapbook or Clipboard. Advanced graphics editing allows you to scale and crop graphics to suit your document's layout.

2 Designing the document.

READYSETGO does not restrict document design—you can change the appearance or contents of the page at any time. Block placement is flexible, yet can be specified very precisely.

The ease of READYSETGO's *what-if* design style inspires creativity. But you don't have to be an art director to achieve remarkable results. Artistic decisions come to life instantly—and the screen displays exactly what you'll print out.

READYSETGO is not cluttered by scroll bars, so you see more of your design. An exclusive new feature lets you scroll documents quickly—even *diagonally*.

3 Printing.

Once designed, you can print your document using the LaserWriterTM, ImageWriterTM, or any PostScriptTM printer. For extra high resolution, READYSETGO documents can be produced on Allied's Linotron[®] series typesetters.

Now READYSETGO offers a professional solution for all your printing and publishing needs that's as easy as 1-2-3.

New! Specifications Version 2.1

Editor

Typefaces: all Adobe fonts*

Point Sizes: 1-99

Document Size: 1-40 pages*

Variable Tabs: 5 with full editing support*

Indents: paragraph, left

Scrolling: up, down, left, right, diagonally; by page or article/block*

Text Flow: reflow, vacuum

Line Spacing: 1, 1½, 2 or by any point size*

Blocks

Maximum: 100 (page); 1,000 (document)*

Frame Styles: square, oval or circle

Solid Block Shades: 4

Lines: solid, broken or hairlines

Manipulation: insert, delete, duplicate, move or clear*

Placement Accuracy: 1/10,000"

Graphics Scaling/Cropping: 1-999%*

Print Preview: single page or facing pages

OverVUE. Best Database of the Year.

Choosing a database manager is no easy task. It's by far the most confusing and fiercely competitive field in Mac software. But now your buying decision is crystal clear, because the editors of MacUser and the readers of MACazine have both selected OverVUE as the Best Database of the Year.

Said MacUser (Jan. 1986), in selecting OverVUE for its **Editors Choice Award**: "OverVUE 2.0 is a deceiving program in that the more you use it, the more you realize what it can do.

Power, speed and logical menus make this a dream database."

When MACazine (Jan. 1986) bestowed OverVUE with its **Readers' Choice Award**, they wrote: "We selected OverVUE because of its ease of use, clairvoyance and statistical capabilities. The fact that OverVUE was subsequently selected by our readers as Best Database simply confirms our original assessment: the product is a jewel and the customer support a bonus!"

OverVUE's clean sweep of these two prestigious awards only confirms what everyone else has been saying all along:

Infoworld (July 8, 1985): "...it is Macintosh software done right."

Icon Review (Fall 1985): "OverVUE 2.0 is our favorite database workhorse... it simply offers the best balance of power and ease-of-use available on the market today."

Nibble Mac (Oct. 1985): "OverVUE is not only easy to set up, it's the easiest for data entry. Its tools for entering repetitive data minimizes typing time."

Online Today (electronic version — Nov. 1985): OverVUE 2.0 is a heavy-duty data management tool... It does all the things a good relational database manager should."

OverVUE's features and power make it the ultimate database choice. Clearly, users and editors alike think OverVUE is something special. We think you will, too.

So visit your nearest software dealer and purchase your very own copy of OverVUE, the Best Database of the Year.

Write for information concerning our new Mail Management and Personal Finance Templates.

“YOU GET MASS STORAGE.
PLUS LIGHTNING SPEED.
PLUS WORKING BACKUP.
PLUS BOOTABILITY.
PLUS RELIABILITY.
PLUS TRANSPORTABILITY.
PLUS SECURITY.
PLUS EXPANDABILITY...

INTRODUCING THE EXPANDED,
MORE POWERFUL
BERNOULLI BOX FAMILY
FOR THE MACINTOSH PLUS

"With its incredible speed, we're free to do other, more important things with our time."

"With identical copy backup, we're free from the hassles of restoring data to the disk drive when we need it. It's always available."

"With its unsurpassed reliability, we're free from worries about head crashes and lost data."

"With its rugged, removable cartridges, we're free to work in a more flexible, task-oriented fashion, to take or mail data across country, to expand without the hardware expense, and to lock data up for total security."

These are the things that satisfied users of The Bernoulli Box have been proclaiming for years. Now, with the changes Apple has built into the Macintosh Plus, The Bernoulli Box delivers add-on performance never before possible.

Speed no other mass storage device—inside, beside or underneath—has ever achieved. Immediately usable, identical copy backup. Fast, simple booting. And unparalleled versatility. The cartridges store and ship easily. They can be locked up for security. And when you need to add capacity, you add inexpensive cartridges, not expensive hardware.

Available in single and dual drive versions, and with either 5-, 10- or 20-megabyte cartridges, these new Bernoulli Boxes offer up to 40 megabytes of online capacity. And they join a popular family of Mac products that includes the original 5-megabyte, single-drive Bernoulli Box and our Network Server,[™] still the most functional data storage component for AppleTalk.[™]

The new Bernoulli Boxes for the Macintosh Plus. They deliver an unbeatable combination of plusses. Speed. Backup. Bootability. Reliability. Transportability. Security. And expandability. For more information on how to better manage your information, see your local dealer or call (800) 556-1234 ext. 215. In California, call (800) 441-2345 ext. 215.

THE **ST** COMPUTER LINE FROM ATARI.

IT'S ALREADY KNOWN BY THE COMPANY IT KEEPS.

It's only natural that the hottest new computers in America are attracting the hottest software companies in the business.

The library of innovative business, education, entertainment, system management, and integrated package software for the 520ST™ and the new 1040ST™ is already impressive, with literally dozens of new programs being introduced almost every week.

In fact, the software companies who are committing their time, money, and expertise to the ST are the same companies who regularly show up on all the software hit lists.

And it's no wonder that the leading software developers are excited by the power and speed of the ST Computers.

Stoneware®, for example, checked out the speed of the ST Disk Drive in data base applications and flipped. Instead of having to wait forever to manipulate data, thousands of records can be sorted in a fraction of the time that it takes on other computers. And instant responsiveness is the name of the game, not waiting.

Sierra On-Line®, on the other hand, took one look at our incredible high speed, high resolution graphics and was ecstatic. The result is a whole series of games that are more realistic and lifelike than ever before.

For their needs, Activision® focused on the built-in MIDI ports for attaching synthesizers and other musical instruments. This enabled them to design the ultimate program for playing and composing music.

The list goes on and on. But a designer for Spinnaker® perhaps summed up the capabilities of the 520ST and the new 1040ST best:

"I feel like a painter," he said, "who at last has a canvas large enough to let my creativity run free."

So if you're looking for a computer system that combines the very best in software with the very best in hardware at the very best price . . . you're looking for an ST from Atari.

ATARI®

Circle 370 on reader service card

It's alive!

The Human Touch comes to Macintosh.® It's called the Three to One Touch Board,™ and in the ten minutes it takes your dealer to install it, the Three to One Touch Board will revolutionize your Apple Macintosh.

Start with Speed. By increasing the Macintosh's 8 Mhz. processing speed to 12.5 Mhz., the Three to One Touch Board more than doubles your processing speed. This means that you will now be able to load and operate up to eight programs using Apple's Switcher™ in a fraction of the time it would otherwise take.

On to Memory. Through the addition of 1.5 megabytes of RAM, the Three to One Touch Board actually quadruples your Macintosh's workload capability. The Three to One Touch Board works just as well with your 128 K or 512 K Macintosh. By making all data storage contiguous, your computer works a whole lot harder because it works a whole lot more of the time.

Next, there's expandability. The Three to One Touch Board makes an additional 384 K of ROM space available to you. Look for popular software packages, resident in ROM, available from Human Touch shortly.* Also, the Three to One Touch Board contains expansion capabilities that allow access to the micro-processor bus. The card cage and case adaptor will be available from Human Touch soon.

Don't forget ease of installation. The Three to One Touch Board opens the Macintosh architecture without the need to solder, wire, or alter the inside of your Macintosh in any way.

Tell your dealer to give us a call for further information.

Finally, there's action. This is the only part of the Three to One Touch Board program we've left up to you. Get on board . . . when it comes to your Macintosh, the Three to One Touch Board gives a whole new meaning to being alive.

Personal Computer Games Come of Age

A new genre of computer play mimics the real world, exercising the mind and not just the mouse

Conventional wisdom in the personal computer industry says that the potential of home computers will not be realized until some truly practical and desirable application comes along. Electronic shopping and control of household appliances are often cited as the breakthroughs that will someday send hordes of new customers to the computer stores.

But I believe that it will be entertainment, not utility, that makes the home computer a standard household item.

I'm not referring to multitasking, RAM-resident utilities, networking, artificial intelligence, databases, or even cursor keys that glow in the dark.

No, I'm thinking about something that happens to have many more implications for humanity's mental health: computer games.

In the final analysis, computer games will prove to be the deciding factor that puts computers in every home. Fun—not functionality—will be the key.

Ultimately, computer games will change not only the way we view the world—they will also change the way we think about thinking.

How is that possible?

First of all, I'm not referring to the goofy track 'em, eat 'em, shoot 'em up games played by the game pioneers of olden days.

We've come a long way since then.

Most early games, you may recall, grew out of video games—or, to be precise, out of the mainframe computer game called *Adventure*.

In *Adventure* you traveled along a branching path, looking left and right, and made decisions about which direction to take. You also had to pick up certain objects along the way, such as a lantern and a

knife. Eventually, you crossed a stream and came to a cave.

Waiting inside the cave was a dragon you could slay only if you managed to light the lantern and grasp the knife.

Adventure was the great-granddaddy of today's interactive adventure games for personal computers. Computer games that originated from video games like *Donkey Kong*, *Pong*, and *Breakout* largely tested your reflexes and your hand-eye coordination.

One thing computer games didn't do was tax your brain. They were variations on a theme, and after you played them for a while, they became boring.

Because these games were so dull and repetitive, most computer magazines and computer enthusiasts wrote them off as juvenile pastimes. Games weren't seen as particularly meaningful.

Until now.

With personal computers that are more powerful and have more memory, computer games have changed dramatically. They are becoming exercises for the mind.

I heard about this notion from Trip Hawkins, president of Electronic Arts, a company that specializes in home computer games. Trip spoke at a computer conference recently about the brain's Use It or Lose It syndrome. He made the interesting observation that from the seventies on, physical exercise has been an important part of people's lives. More and more people today jog, swim, use Nautilus equipment, and engage in various other physical activities.

(continues on page 16)

*Ultimately,
computer games will
change the way we
think about thinking.*

Only the Hayes® Transet 1000® can get you out of this one.

© 1986 Hayes Microcomputer Products, Inc.

Now your PC can do three things at once instead of making you wait while it does one thing at once.

We call it *triple tasking*®.

It means you can work with your PC while the Transet 1000 receives your electronic mail and runs your printer for you simultaneously.

Three jobs at once. No waiting.

When you're away from your desk, or at night while your PC is turned off, Transet 1000 serves as an electronic mailbox.

Because it has its own independent 128K or 512K memory.

To get the messages that come in through the night, you can call them up on your PC. Access them through a remote modem if you're away from the office.

Or even have them waiting for you in hard copy.

By now it's dawning on you

Hayes®

Say yes to the future with Hayes.

* Manufacturer's estimated retail price.

that Transet 1000 can make your PC about three times as productive as it is now. Which is no small statement.

You've also figured out it's more than just a print buffer. More than just a communications buffer. And probably costs a lot. Right?

Wrong!

It costs only \$399* for the 128K model which stores up to 90 pages. And only \$549* for the 512K version with up to 360 pages of storage.

For more information and specifications, contact your authorized Hayes dealer. Or Hayes directly at (404) 441-1617.

Hayes Microcomputer Products, Inc., P.O. Box 105203, Atlanta, Georgia 30348.

Meet The Perfect
Companion For
Dinner At Eight.TM

THE
SILVER PALATETM
C·O·L·L·E·C·T·I·O·N

If you enjoyed browsing through recipes from America's finest restaurants, you'll love spending time with The Silver Palate Collection, compiled from the renowned Silver Palate Cookbook[®] by Julee Rosso and Sheila Lukins.

This easy-to-use add-on disk for the bestselling Dinner at Eight program enables you to turn an everyday meal into a deliciously memorable occasion as you speedsearch recipes from either collection, combine shopping lists, and coordinate cooking times for everything from a single serving to an elaborate feast.

Now both programs are available in a special package deal from Rubicon Publishing. Call today for the delectable details!

For more information, call 1-800-MAC-2210
6300 LaCalma Drive, Suite 100, Austin, Texas 78752, 512/454-5004

(continued from page 13)

But so far we're exercising just the body and ignoring the mind.

Trip believes that soon we'll discover it's equally important to exercise our gray matter. With practice, we'll be sharper mentally, have a better memory, and in general prolong our intellectual alertness as well as delay the mental effects of aging.

What health food is to the body, computer game software will be to the mind.

In fact, personal computer games could be the most engaging and beneficial form of mind exercise. Today, some people do the Sunday *New York Times* crossword puzzle, and some people play chess. These are mental exercises, of course. But the computer gives us the potential to enjoy a much greater variety of mental exercises with far more applications.

I've recently found two examples of games that flex the brain. There are many others, and there will be many more in the future, but both these games are excellent tools for developing awareness. They are also extremely educational.

One is Mindscape's *Balance of Power* for the Macintosh, and the other is Reality Development's *Business Simulator* for the IBM PC.

I think that the theme of *Business Simulator* reflects the fact that the IBM PC is a business-oriented machine for the corporate world, while the global quality of *Balance of Power* is more in line with the attitudes represented by Apple's Macintosh.

With *Business Simulator* you start your own company. You're in the robotics industry, you have \$500,000 in seed money and access to robotics technology—and you're competing against Apple, Hewlett-Packard, Tandy, and Texas Instruments.

As you play the game, you need to make all kinds of choices—like what your prices should be, how many units you should build up in inventory, and how much you should spend on advertising. After you've made the choices, you run the program. It goes through an entire year's projections. Depending on your choices and the preprogrammed decisions of the other companies, the program determines your market share and how successful you'll be.

The game becomes more complex as you go from one level to another. For example, on a higher level you have to intro-

duce new products into the market. There's a pet robot, then a security robot, a home robot, and other consumer products. You must decide how much money to spend on R&D. You're concerned about return on equity, about raising venture capital and building new factories. And you have to decide when to go public.

It's really like a Harvard MBA course on a disk.

Of course, the game is not real life, but you do learn many valuable concepts about doing business. As I became more involved in playing it, I began to dream at night about what kind of robots I was planning to build and what my fictional company was doing.

In fact, the game became so consuming that I spent more free time thinking about *Business Simulator* than I did about my real job at PC World Communications.

In *Balance of Power*, you find yourself playing the role of the United States or the Soviet Union. The purpose is to create a global strategy. The impact of your moves can put the whole world in jeopardy, especially since you could easily cause a nuclear conflagration.

(continues on page 18)

NEON™: TURN ON THE FULL POWER OF YOUR MACINTOSH.™

THIS MESSAGE IS FOR BEGINNING PROGRAMMERS, TOO!

Hidden within your Mac is the programming power, flexibility, and speed to match your imagination. Neon is your key to this object-oriented world. Based on the same design philosophy as the Mac itself, Neon lets you create and command objects—program modules that you build, perfect, and add to your personal collection of tools. In this Smalltalk-like environment, you wield the power to quickly assemble and test ideas, tuning as you go for maximum speed and efficiency. □ Neon now includes full floating point support. An integrated Neon Assembler is also available as an add-on product. □ Neon is easy to work with and comes with a comprehensive manual by Danny Goodman. □ Created by Kriya Systems, Inc. for the development of our Typing Tutor III™ program, Neon is your answer for professional software development. With Neon, there are no licensing fees. Ever. For the MacIntosh developer, Neon is the best choice.

To choose, call 1-800-34-KRIYA (In Virginia, 703-430-8800) with Visa/MC. Or Write Kriya Systems, Inc., Six Export Drive, Sterling, VA 22170. Neon, \$195; Neon Assembler, \$50. Add \$5 shipping for each.

Neon and Typing Tutor III are trademarks of Kriya Systems, Inc. Apple Macintosh is a trademark of Apple Computers, Inc.

Meet Thy Maker

PageMaker™, the remarkable page layout software program, brings the capability of a dedicated publishing system to the personal computer for the first time. You can now produce high-quality business communications such as newsletters, data sheets and price lists in your own office.

Combining PageMaker with a Macintosh Computer and Laser-

Writer creates a powerful desktop publishing system. It so substantially reduces the time and money you spend on publications, the system pays for itself in less than one year. PageMaker eliminates the need to spec, order, wait and pay for type, illustrations and photostats. It gives you the ability to prepare and print your publications within hours rather than days or weeks.

It's time you met your PageMaker. For more information, contact Aldus Corporation at 1-800-824-4000, ext. 674.

PageMaker

(continued from page 16)

Just as with *Business Simulator*, you become completely involved, so when you accidentally blow up the world, you actually feel depressed.

As a consequence, you are determined to be more careful when you start up a new game. You come to appreciate the implications of each action, and you learn some of the complexities of international diplomacy. The game has four levels—Beginner, Intermediate, Expert, and finally, Nightmare.

As you play, you make decisions about whether you should support the use of force in a particular country or attempt a coup d'état and assume leadership. If so, how will the other superpower respond to your moves? What are the implications?

A decision that is a good strategy in one case might prove to be disastrous in another. The goal of the game is to gain more prestige than your rival without blowing up the world.

These two games are examples of how the computer game has come of age. I think that all computer users will pay more attention to games from now on.

And I predict that games will usher in a new era of fitness aimed at developing and strengthening the mind—firming up gray matter that has become flabby from lack of strategic exercise.

There could be all kinds of *Business Simulators*. In fact, just as the early computer game *Adventure* came to us from the mainframe world, today's genre of so-called reality software is also taken from mainframe computing.

For some time now, programmers have been developing business simulations on mainframes for specific companies like IBM and AT&T. So, for example, instead of playing with a robotics company, I could have a magazine publishing company. I could program my personal computer with all the characteristics of different computer magazines, and in doing so I would be creating a real-life simulation of my own business. Eventually anyone could have a custom-designed simulation.

This is where computer games are heading. As personal computers continue to gain memory and horsepower, you'll see more levels of simulation that truly relate to your life—both personally and professionally.

It's been a long time coming, but computer games are no longer going to be con-

sidered an unimportant by-product of computer technology—just something for kids to do when they want to vegetate electronically.

The games are going to be much more serious than that. Two or three years from now, computer games will be *the* thing.

When you add CD ROM technology to computer games, they're going to break through all kinds of mental barriers. That breakthrough will herald the golden age of computing, the information renaissance.

Just think about it. Radio, television, stereo—all these major advances in human communications met popular acceptance through the entertainment world.

It's always entertainment first, education second.

And with this new generation of computer games, we will see the distinction between entertainment and education disappear completely.

They will become one and the same. □

A mistake in the April column rewrote Philippe Kahn's life story; actually he never worked at Xerox.

TimeWand™ - Keeping track of time...

Six easy steps to time management!

The Videx TimeWand™ is an intelligent yet inexpensive bar code system for your business needs. Small enough to fit easily into a shirt pocket and weighing in at less than two ounces, TimeWand gives a new dimension to the concept of fully portable bar code readers.

Versatility is the hallmark of the TimeWand system. With its built-in microprocessor, TimeWand puts the power of a computer into the palm of your hand. Power that lets you actually change how TimeWand works. Whether you want to read different types of bar codes or program the wand to read bar codes in a certain order, TimeWand can accommodate your needs.

Available in three different memory configurations, TimeWand can store from 2,000 to 16,000 characters in its internal memory. This means you can hold from a few hundred to a few thousand bar codes in the TimeWand before transferring the information to a host computer system.

TimeWand time-stamps *each* bar code as it's read. This lets you know not only what the bar code says, but *when* the code was read.

The TimeWand's recharging/download station uses a standard RS232C serial connector that allows you to communicate with the wand through a variety of host computer systems. Since the communication is keyless, the scan information is sent quickly and error free. Currently, software packages are available for the IBM PC (and compatibles), Apple //, and Apple Macintosh personal computers.

Put the power of TimeWand in your own hands... and let it work for you.

TimeWand (2K version) - \$198

Recharger - \$149

TimeWand Manager Software (Macintosh) - \$499

TimeWand Communications Software (IBM) - \$299

Don't be overwhelmed

The good news is that virtually all of you who follow these things know that Microsoft® Word is by far the most capable word processor you can run on a Macintosh™.

The too bad news is that some of you think that means you're not qualified for Word.

Well, you don't need to be writing a novel to appreciate the way Word accelerates all the repetitive activities of word processing.

In fact, if you've ever needed to combine information from old files in a new one, or if you've ever had to shut down one file just to look at another—then you're ripe for Word.

Leave the windows open.

For people who've gotten used to the tedium of closing one job before they could open the next, Word's windows are a real eye-opener.

Because this feature—an exclusive, we must add—lets you display four

different Word documents on screen at one time. And leap rapidly from one to another, cutting and pasting among them.

A real time saver, even if you're only composing a memo. If, say, you needed to combine material from your three previous memos into a fourth new one.

The training wheels aren't welded on.

Some things *are* best done with mouse and menus. But once you've worked with a Macintosh for a while, you'll want the option to run commands from the keyboard as well. A faster way to order up everything from opening and closing files and starting a new file, to printing and saving, to changing font styles or page formats. It's an option only Word gives you.

Avoid the risk of repeating yourself.

For everyone who hates to type the same thing twice, the Glossary alone has been enough to convert them to Word. In the Glossary you can store letterheads, standard disclaimers, the party line. Or

PRIME DEVELOPMENT CO.
"Cutting you the best deal possible"

March 19, 1986

Gary Williams
Metropolitan Landscaping
634 Tradewinds Way
Santa Maria, CA 98034

Re: Gotham Square - Project No. 83-2014 - Metro Land

Dear Gary:

Per our conversation yesterday, I wanted to send to you by Metropolitan Landscaping for the Gotham Square original estimate in every case, and we will be unable to provide an explanation and back-up.

Project

by superiority.

munbo jumbo. All can be instantly retrieved with a keystroke.

At the bottom of this ad you'll find trademark info and other legal niceties. Perfect examples of things to keep in your Glossary.

Word won't hold you back.

If you need to do professional quality word processing on the Macintosh, we're pleased to say your choices are limited. To Microsoft Word.

A monopoly you will not mind. Because Word gives you everything your literate heart could desire. Noteworthy being unlimited manuscript length. Just keep writing 'till your disk runs out. Then put in another disk.

Word also runs the most popular letter quality printers. As well as the Apple® LaserWriter. For astonishing results.

In fact, you can astonish everyone you've ever known with Word's exclusive mail merge feature. Which lets you match form letters with address lists. Putting mass mailing in the reach of anyone who seeks a vast audience.

You'll pick up Word fast.

We were smart enough to make Word supremely capable. We weren't going to be dumb and make it hard.

As the designers of more Macintosh applications than anyone else, we give Word the benefit of our unmatched experience. Along with a very comprehensive on-line Help feature. Making Word a very quick study.

And if you should ever have a question you can't work out on your own, our telephone support people will walk you through it.

So before you process another paragraph, test scribe the program from Microsoft. And never be at a loss for Word.

Microsoft Word

The High Performance Software™

Free Memory

TheMax2™ for 128K and 512K

TheMax2. With three times more added memory than you get from Apple for about the same price, it's like getting memory free.

- **Have 2 Mb in minutes.** Installation is so easy you can do it yourself.
- **Get contiguous memory** without changing ROMs. With 15 Mb contiguous, you're free to handle all your favorite software, even Switcher and Excel.
- **Add the new Apple ROMs** when you're ready, for 2 Mb of contiguous memory, without boot software.
- **Plug in the new megabit chips** for 4 Mb that can handle even the largest programs.
- **Recover easily** if you crash — MaxRAM saves your RAM disk intact to get you going again fast.
- **Get MaxRAM and MaxPrint free** — you'll have more free time.

Circle 337 on reader service card

Free Time for all Macintosh users

Introducing MaxRAM™ and MaxPrint™ two productivity tools that are so useful we include them free with every Max expansion product. Now, whether you have a 512K, expanded memory, or hard disk system, you can have them, too.

MaxRAM automatically creates an adjustable RAM disk at boot that runs 10 times faster than a floppy disk. Best of all, it auto-loads as easily as putting files into a folder, both from hard disks and from multiple floppies.

MaxPrint — the desk accessory that lets you keep on working while you print — even lets you change files and applications. And it spools both text and graphics easily. Use it with expanded memory or hard disk systems — the perfect companion for Apple's HD20.

Now, with MaxRAM and MaxPrint, your only problem will be deciding what to do with your free time.

Home Free

Just ask. We'll send you the product of your choice to try for 15 days — free. If all that speed and efficiency isn't right for you, feel free to return your order for a full refund. Want more information? In California, call (408) 773-9922. Outside California, call (800) 862-2636

TheMaxPlus™ for the Macintosh Plus

TheMaxPlus turns your Macintosh Plus into a 2 Mb powerhouse of memory — modular memory to expand with your growing memory needs.

- **Install it yourself in minutes.** Just plug TheMaxPlus into the Macintosh expansions slots provided by Apple.
- **Have more memory free** for handling your largest applications — 2 Mb of linear, contiguous memory that doesn't require boot software or ROM modifications.
- **Feel free to expand** — our modular design lets you plug in a full 4 Mb when you need it, and be ready for other MacMemory plug-in products as well.
- **Get more free time** — free MaxRAM and MaxPrint software let you work 10 times faster than with a floppy — even work and print at the same time. Now you can use your time to do more than just wait.

Network Static

Until information services are as easy to use as MacPaint, the people who use them will remain a minority.

In spite of these caveats, I still recommend having a modem.

In personal computing the term *networks* refers to the various aspects of telecommunications. Networks are touted in full-spread ads in computer magazines, on modem packages, and in books and breathless articles about the emerging network nation. Networks include information services, common carriers that link personal computers to those utilities, small-scale bulletin boards, conferencing systems, videotex and teletext systems, and, of course, local area networks in the office.

None of these networks lives up to the hyperbolic promises of the last few years. The promises have come mostly from two camps: people whose business is directly related to networks and telecommunications enthusiasts who are to networks what hobbyists were to the first personal computers—brothers and sisters, under the skin, to CBers and stamp collectors. In real terms, networks are not yet ready for most people because of unfriendly user interfaces, an unfavorable cost-to-benefit ratio, the lack of hardware and software standards, and the specter of electronic junk mail.

Despite the great number of how-to books about information services, connecting a personal computer—even the otherwise easy-to-use Macintosh—to information services such as The Source or CompuServe is still time-consuming and frustrating for a beginner. Despite on-line help, tutorials, seminars, and one-to-one instruction sessions, even long-time users have their costly on-line time gobbled up by discovering through trial and error unannounced changes in a system's user interface, command set, or communications protocols. On-line services will not catch on with the general public until they are as easy to use as *MacPaint*.

Taken together, all the benefits of subscribing to an information service may justify the costs of a subscription and connect time. But most businesses and individuals do not need instant access to the whole gamut of on-line offerings, from teleshopping and airline schedules to stock market quotes and general news. The information demands of businesses and individuals are highly specific, vary with time, and can often be met more cost-effectively through alternative—and less expensive—sources, such as the public library. There will be no mass market for general information services until the cost of the services approaches the average cost of subscribing to a magazine or a newsletter.

The information services' scattershot approach negates a major advantage of microcomputer technology: the ability to narrowcast information. Although specialized services such as Newsnet and Dow Jones News/Retrieval cost more than general-information services, they are the best buys for businesses that need timely information.

No Standards and Too Much Mail

Without hardware and software standards in telecommunications, network designers are caught in a bind. Because the existing base of users includes a variety of terminals and personal computers, the search for the least common denominator (and the least cost) prevents each network from taking full advantage of the state of the art. Making telecommunications seem easy and intuitive through the still-evolving Macintosh interface takes a lot of hard work and cold cash—more than the infor-

(continues on page 29)

OMNIS 3, ALWAYS

OMNIS 3 is designed as the one database you will ever need to buy – whether you want a simple file manager or a complete business information system. As your database requirements increase, you can take advantage of OMNIS 3's powerful, mouse-driven programming language to customize applications in record time. *And as no other database, OMNIS 3 will grow with your needs.*

OMNIS 3 COMES IN BOTH SINGLE-USER AND MULTI-USER VERSIONS.

“OMNIS 3 is an ideal means to develop customized applications for Macintosh. It is a powerful development tool that provides multi-user solutions for vertical markets.” Guy Kawasaki, Manager, Software Product Management, Apple Computer.

“Multi-user capability; microcoding

AHEAD OF ITS TIME.

with the mouse; automatic syntax; your own pull down menus and on-screen button commands...no wonder we're developing custom software in a fraction of the time it used to take with Assembler, Cobol, and the rest." Dr. Michael Sanders, The Program Workshop, Washington, D.C.

"As a straight database, OMNIS 3 functions faster than anything else around." Dr. Felix Evangelist, The Computer Room, Charlotte.

BASF

Note Pad

(continued from page 25)

mation services can afford. Therefore, before a mass market for on-line information can emerge, telecommunications technology must reach an evolutionary plateau, which probably won't happen until early in the next century.

One of the most oversold capabilities offered by information services is electronic mail, or E-mail. E-mail can't replace all functions of regular mail. Most businesses would not finalize a contract, for example, using E-mail. They would rather depend on hard copy, face-to-face meetings, and overnight delivery services.

In my experience many more people make demands on my time through E-mail than through regular mail if I let them. Junk mail in a post office box is bad enough. Junk messages in an E-mail box are more frustrating because I have to pay for connect time to read sales pitches for information or services I am not interested in and can't afford. Besides, people who intend to communicate with one another electronically must be connected to a network, preferably the same one.

Clearly, to popularize E-mail, network designers must develop a system for validating contracts that is as easy, economical, and secure as mailing a letter.

Even with these caveats, I still recommend getting a modem. The future of telecommunications is wide open. The advent of embedded artificial intelligence features in networks will help filter out junk E-mail. Encryption-decryption systems will provide complete privacy for electronic correspondence. On the other hand, compact disk storage devices will make encyclopedic databases as cheap as paperback books and will further undercut the appeal of information services as they're currently structured. These services, in turn, will respond to the objections stated here and to the twin drives of the marketplace and technology. This response should include a few pleasant surprises for those of us who've been spoiled by the Mac and frustrated by the tangled web the networks weave.

Dean Gengle is the author of The Netweaver's Sourcebook (Addison-Wesley, 1984) and a telecommunications consultant with the CommuniTree Group in San Francisco. □

TIME BILLING & MAIL LIST FOR YOUR MAC!

LEGAL BILLING

is a time billing package designed specifically for attorneys. Legal Billing will track time spent, costs dispersed and credits received. Client statements can be printed in several different formats. A variety of other reports can be printed including time, client and aging reports. This package is powerful enough for larger firms, yet easy enough for smaller firms.

Here is what Legal Billing can do for your professional office:

- Prints your client bills in a variety of formats
- Cuts billing time with fast and easy data entry, using up to 45 modifiable codes

- Increases office efficiency with numerous management reports
- Allows monthly or on-demand billings
- Multiple matters per client
- Prints detailed statements in listed or paragraph format
- Handles up to 27 lawyers or employees
- Full use of the MAC Interface
- It's so easy, you can begin using immediately
- Hard disk compatible
- **\$595.00**

Legal Billing, Professional Time Billing and Bulk Mailer are available at your dealer or from Satori Software.

BULK MAILER

is a powerful program specially designed for managing mail lists, large or small. Bulk Mailer does everything you want in a mail list program, including duplication elimination, zip and alpha sorts, 1 to 4 up labels printed, easy-entry defaults, multiple label format, plus much, much more. And this special Macintosh version is incredibly easy to use.

This is the only program to offer all these features:

- Duplication elimination
- Zip or alpha sort
- Car-ri sort or zip + 4

- 1 to 4 labels or roster format
- Powerful coding capabilities
- Sophisticated global editing and deleting
- Mail merge with Microsoft Word
- Envelope printing
- Easy-to-use entry defaults
- Coding and date expiration fields
- Large record capacity (up to 45,000 names)
- Hard disk compatible
- Full use of the MAC Interface
- **\$125.00**

Graphic Details: Notes from a Novice Publisher

Hard copy about the desktop publishing craze

I once spent a brief internship at a small newspaper in central Pennsylvania. As it happened, that season was a cathartic time in the newspaper's long history: the production process was changing from Linotype to offset printing. This meant that the highly skilled handlers of hot type—those who operated the machines that hammered the lettering into the heated metal and who then, with the lead barely cooled, dealt the type into columns with all the deftness of Vegas blackjack dealers—were rendered obsolete. Since they had been guaranteed job security, their new job was moving around the columns of “camera-ready type”—already-printed text and

headlines—and pasting them on page forms that would be photographed for printing. It was embarrassingly less time-consuming and immeasurably less macho. After all, standing around a layout board is not exactly beer-commercial material. Yet, the men and women swallowed their pride and did it.

The new process greatly lowered the cost of publishing and made possible a lot of otherwise marginal ventures. If you were to look back and compare what was lost (a culture of Linotype masters whose art form was present in every well-crafted

page of type) to what was gained, you would have to conclude that the change was for the better. Indeed, it is unimaginable to consider any periodical today choosing to use the old style of production, unless it wanted to present itself as a sort of living museum.

Desktop Publishing

As significant as that change was, we are in the opening stages of something even more cataclysmic: the desktop publishing phenomenon. This is a revolution fueled by the convergence of three tools: personal computers, printers that displace typesetters (most notably Apple's LaserWriter), and page-makeup software capable of transforming computer documents into a format that looks, well... published. The idea is to eliminate the type shop entirely; one person equipped with less than \$10,000 worth of technology can now churn out something that looks typeset.

This can result in severe cognitive jolt. For when we view a document that looks “professionally” printed, our assumption is that a certain amount of production time and money went into it. We react to it differently than we do to something created in the familiar, typewriter-style manuscript form. We actually read it differently. In this Stone Age of the desktop publishing phenomenon, these are relatively subtle considerations. But as the trend continues, people will have to consider the consequences of using a technology previously available only to craftspeople.

Some of these considerations became apparent to me only when I attempted my own venture into the world of desktop publishing. As a service to an organization of computer writers I belong to, I volunteered to put together a newsletter. In previous times, standard typewritten output might have sufficed, but a collection of journalists supposedly in touch with the cutting edge of computerdom would look pretty silly with such a low-tech effort. So it was a foregone conclusion that the Computer Press Association newsletter would be not only written but also laid out on a Macintosh, and printed on a LaserWriter.

THE INVESTOR

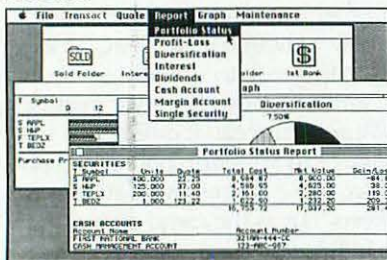

Invest in Your Personal Success

Sophisticated

The Investor is a full-featured portfolio management system created exclusively for the Macintosh. The Investor gives you control over your financial holdings, allowing you to participate in the rousing bull market with confidence.

Versatile

Attain maximum performance with minimum effort. The Investor is easy to use, flexible and fast. A valuable aid for decision-making and tax preparation, it produces over a dozen reports and graphs to record the performance of your portfolios.

Easy To Use

The Investor is the only portfolio management program designed from the ground up for the Macintosh. The program uses icons, windows, dialog boxes and pull-down menus already familiar to you.

See your dealer for a demonstration, or order The Investor directly from us. Our 15-day, money-back guarantee ensures your satisfaction. VISA and MasterCard welcome.

Circle 492 on reader service card

The Mac, of course, is the machine on which the craze is centered. It is not the only machine that works with the LaserWriter, but it does have the best software for the task.

MacPublishing

The software everyone is talking about is a \$495 program called *PageMaker*, but before jumping into that, I thought it would be a good idea to try a more modestly priced package—Boston Software's \$99.95 *MacPublisher*. Boston Software's \$149.95 *MacPublisher II*, which has several enhancements to the original program, including the ability to open word processing or graphics files directly, a telecommunications facility, and automatic text flow, was not available at the time I created the newsletter. I might also have tried Manhattan Graphics' \$125 *ReadySetGo 2.0*, which offers a range of features similar to the other programs.

MacPublisher works by putting a dummy page on the screen. The theory is that you can lay out stories, pictures, and headlines just as if you were pasting up a physical page. It's a logical tack, but in practice it can get somewhat unwieldy. The problem is that every item you lay down on the page has to be in a particular format. You need a separate file for every story, headline, picture, and "continued on page 2." These files add up; I have never messed up my Macintosh desktop quite as thoroughly as I did after an hour of using *MacPublisher*. The manual suggests you reduce clutter by storing the files in folders, but you can't avoid the problem entirely—*MacPublisher* doesn't print unless the files are open. This is like a printing company refusing to accept the finished boards unless the original typed manuscript pages are also provided.

It took me a little time to get used to the way the cursor kept changing from a little arrow to a tiny pair of scissors (which you use to move stories around and cut text to size), and I never did get the hang of using the transparent ruler, which is supposed to size stories and pictures on the page. But eventually I was able to lay out my first page. It took longer than expected, because I frequently had to shut down *MacPublisher* to create a graphic in *Mac-*

Paint, look something up in *MacWrite*, get a file I downloaded from *MacTerminal*, or swipe a piece of clip art from a Simon & Schuster program called *The Mac Art Department*. The notorious Disk Swapper Sore Wrist syndrome began to set in.

My difficulties were more a hardware problem than a flaw in *MacPublisher*, however. Using the software would be much easier with a hard disk for storing the applications and files. In my own case, poor planning aggravated the problem: if I had created everything I wanted to go in the newsletter beforehand and used the Scrapbook, I wouldn't have had to do so much switching. But then, the whole point of desktop publishing is interactivity—the freedom to move things around on the page and, if there's a hole that needs a picture, to instantly whip up something to put in the hole.

That problem aside, *MacPublisher* proved itself capable of doing the job I set out to do and allowed me a good time while doing it. I was creating headlines, moving pictures over from *MacPaint*, and laying out articles—all without my hands getting sticky with rubber cement or hot wax.

PageMaking

Things got even better when I moved to *PageMaker*, the Cadillac of desktop publishing software. The limitations of *MacPublisher* had particularly primed me for the virtues of *PageMaker*. More intuitive commands handle text layout and picture sizing. Unlike *MacPublisher*, *PageMaker* lets you italicize or boldface words and even write headlines without creating new files. And once you load stories or pictures into the final document, you can get rid of the original files.

It wasn't long before I was drunk with power, switching on three-column formats, selecting documents, and—by a simple mouse click—filling in text neatly down the columns. Then I would move things around, getting the page to my liking, dropping in pictures and resizing them to fit the space. I filled up my eight pages in quick order.

(continues on page 34-35)

(continued from page 32-33)

Coming of Age

Soon I was ready for the acid test: printing the newsletter on the LaserWriter. I do not possess that pricey peripheral, but I live near a fellow named William Bates who not only owns one but has written his own typesetting software, called *JustText*. So I took my disks—just about enough to fill up a box, what with data disks and program disks and startup disks and backup disks and master disks—over to Bates. We fired up the LaserWriter, loaded the software, and told it to print.

Since the LaserWriter doesn't make much noise, it was hard to tell what was happening in there. But in less than a minute, it grudgingly ejected a piece of paper with the first page of the newsletter.

At first, I was bowled over by the quality of what I had done. It looked *real*, especially the headlines, so solid in their Times Roman font, just like the daily newspaper. It was hard to believe that I had single-handedly created that document while sitting at my desk.

I said something to that effect, and Bates looked dubious. "Do you feel that way when you see your *words* in print?" he asked. Well, no... but maybe I felt that way the first time I saw my words in print.

I recalled the glow of that moment. The fact that crews of art directors, pasteup people, and printers had worked on my story marked the passage of my work from private habit to public declaration. It had not been an altogether happy event, though. When the initial shock was over, I reread that first story, finally in formidable columns of justified text, arranged in the same way as the words of the writers I had admired for years. For the first time I was able to see where my writing was not quite up to standard. Norman Mailer was safe.

Standing at the LaserWriter, looking at my first foray into the field of design and production, I had similar feelings. A second glance at my newsletter revealed that my graphic skills were woefully inadequate to fully take advantage of what technology had brought within my reach. The newsletter's logo, a combination of text and a graphic, spilled over the middle column almost to the right of the page—I had thought this placement an elegant variation, but it simply looked awkward. Though I had restrained myself in the use of different type fonts, I could see how even the few alternatives in headlines and "continued on page..." lines I had tried clashed violently.

The rest of the eight-page newsletter, though impressive in places, was full of similar horrors. There was no consistent scheme for mixing the text with graphics and headlines, no page design to point readers to what I wanted them to read first. These flaws were not so drastic that I was tempted to trash the entire project; the wonders of the software and the laser printer make sure that anyone with a rudimentary sense of layout can create an adequate piece of work. What bothered me was that I, a graphic-design virgin, had suddenly been thrust into competition with renowned graphic designers such as Milton Glaser. I might have had a better chance in a boxing ring with Michael Spinks.

Before depression could set in, Bates began showing me his own desktop publishing software. Unlike the previous two packages, the \$195 *JustText* doesn't work with the Imagewriter and doesn't have a preview mode so you can see on screen how things look. We worked on just one page; to get it right, we wound up printing over a dozen tests. But ultimately that page looked more impressive than the output from the other two programs. This was not so much because of the power of *JustText*, but because the page was laid out by Bates, who not only knows the software but knows about professional page layout as well.

And that's the key. I suspect we are going to see a lot more professional-looking documents as desktop publishing technology catches on. The more we see, though, the more we will appreciate documents created with a sensitivity to good art direction, imaginative page layout, and a solid awareness of how to manipulate graphics and text to make an effective presentation.

I can recommend any of the software packages I worked with. But none of them can replace careful craftsmanship. While the tools and techniques of publishing are now within anyone's grasp, the skills still have to be learned. It's as if the cost of airplanes were reduced by several factors of ten: we'd all have Learjets, but we wouldn't automatically know how to fly the contraptions. Most likely, more than a few of us would have some horrid moments circling the airport trying to figure out how to get the thing back on the ground. □

The Mouse Is Out!

The Macintizer is *better* than a mouse: its stylus gives you precise control for drawing, you can trace original artwork, and it won't clog or skip.

PLUS, the Macintizer plugs directly into the mouse port for 100% compatibility with all your programs—no software modifications required.

Turn your Macintosh into the graphics machine it was meant to be—with the Macintizer.

Contact your dealer or GTCO Corporation for more details.

HAVE YOU STRIPPED YET?

It's a question more and more Macintosh owners are asking. And no wonder. What everyone is talking about is Softstrip™. The revolutionary technology that is changing the shape of computer software.

The Cauzin Softstrip System is more than just software or data on paper. Because when you invest in this system, you can do much more with your computer, and for far less than you are probably spending now. You can even create and print out your own data strips.

But that's only the beginning of an offer that's going to make you wonder why you haven't stripped yet...

TAKE OUR ADS (SUCH AS THIS ONE)

It's part of our expanding StripWare™ Library containing programs, data, clip art, spreadsheet macros and templates. The Library features a variety of software applications and you'll find new material appearing each month in the leading computer magazines including MAC Apple, MACazine, Mac User, MacWorld, and Nibble Mac.

BUT THERE'S STILL MORE...

When you invest in the Softstrip System, you get the Softstrip reader, a special storage base, and a full one-year replacement warranty. Also included with your purchase is a complete Accessory kit for your Macintosh containing connector cables and communications software to link your computer to the reader.

In addition, you'll find a StripWare Sampler with 23 programs from such popular authors and publishers as Addison-Wesley, Family

Computing, Hayden Books, Nibble/MicroSPARC, Osborne/McGraw-Hill, The Waite Group, and John Wiley & Sons.

When you become a Softstrip reader owner, you also get a FREE one year StripWare Club membership with programs mailed to you monthly. You'll even receive a FREE Cauzin Effect Newsletter filled with the latest updates and news about Softstrip developments. And on the pages of such magazines as // Computing and Nibble Mac, you'll find featured programs on strip each issue.

AND IF THAT'S NOT ENOUGH TO START YOU STRIPPING...

You'll find StripWare brand software in authorized Softstrip dealers across the country. Our collection of titles include everything from

StripWare packages offer utilities, games, business programs, templates and much more.

utilities and entertainment to business programs.

There is even a StripWare program that let's your Macintosh talk. All for only \$2.98 to \$19.98!

Do you want to create your own data strips? Well, now you can using an Imagewriter dot matrix printer and a special

StripWare program called "STRIPPER" that's only

\$19.95. Just think of the things you could be stripping. Store backup files on paper. Print, copy and mail your own programs to others easily and inexpensively.

The Cauzin Softstrip System is just that, a complete system that opens up a new world of computer programs and data on paper. And it's all yours for only \$199.95!

For the Softstrip System Dealer nearest you, (or if there isn't one in your area, to order), call toll free: 1-800-533-7323 (in Connecticut: 203-573-0150)

A MACPAINTER'S EYE VIEW

One of the most innovative uses of MacPaint is to present slide shows. Visual representations can be used to market a product, tell an organization's story or even to present an annual report at a convention.

The data strip on the near right contains a graphics utility called **VIEW PAINT** by Steve Dagley and Creative Computer Services. Using the entire screen the program displays just the upper left-hand corner of a MacPaint document. This makes viewing a number of documents a great deal easier.

The program is useful for creating a startup screen or making that important slide show. Store your MacPaint masterpieces on a data disk, and scan your visual library using **VIEW PAINT**.

After you read in the data strip, scan your files and open those MacPaint files you need. Simply Click to view another.

GET CONTROL OF YOUR DISKS

Take a look around the room. Are you slowly being overrun by floppy disks? Maybe you've placed all your valuable disks in a convenient plastic case. What's on the third data disk you come to? Is speedy retrieval of a program for you? Wouldn't it be great to have a librarian to keep track of all the files on your disks?

The three data strips on the far right contain a program called **DISK CAT**, by Craig Vaughan of Software Sorcery Inc. of Virginia, that should help you correct the problem. **DISK CAT** catalogs the contents of your disks. It provides the file name, type, creator, name of the disk it's on, and a "location" field specified by you.

Read in the data strips and **RUN** the program. It will ask you to enter the location for the batch of disks you want cataloged. Just pop in one disk after another and the contents are cataloged to a library text file with tabs between each field. It's easy for you to transfer the contents to a word processor or filing program for further processing.

These programs appear courtesy of the Boston Computer Society.

Now, Macintosh Plus Has the Drive to Succeed In Business.

Introducing AST-4000™ The advanced, hard-disk/tape-backup system for the Apple® Macintosh™ Plus. AST-4000 gives the Macintosh Plus all the sophisticated features required for serious business computing. Together, these two great systems offer powerful, reliable data processing and storage capabilities.

With performance specifications that exceed even the most demanding business computing environments, AST-4000 is fully compatible with the software packages you need most to help run your business.

This high-performance, hard-disk system has the capacity to ably handle the file server needs of AppleTalk® network software like MacServe™ and TOPS™. And provides maximum speed and functionality for your data base software like Omnix 3™, Double Helix™, Interlace™ and Business Filevision™, as well as memory intensive integrated applications like Jazz® and Excel™.

Even with vertical software packages, such as Page Maker™ for desk-top publishing and Dental Mac™ for medical office management, you'll find AST-4000 increases office productivity through enhanced system versatility, storage and data-access speed.

AST-4000 Expands To Meet Your Future Needs. You can order your system

with as few as 74 megabytes and, as your requirements grow, add Expansion Units for up to 370 megabytes of total data storage capacity. That adds up to the largest, most versatile hard-disk/tape-backup system available for the Macintosh Plus.

It's fast. AST's advanced Winchester hard-disk is designed for speed and safe, reliable data storage. With a 30-millisecond average-disk-access time your favorite software packages will sizzle with speed. That translates into increased efficiency and higher productivity.

Our 5-megabyte per minute tape data transfer rate also means it's fast and easy to make backup tapes, providing maximum archive security.

A Powerful Business Connection. Thanks to our industry-standard SCSI (Small Computer System Interface) bus architecture design, AST-4000 is fully compatible with the new Apple Macintosh Plus and a variety of readily available peripherals. Additionally, universal compatibility with all leading personal microcomputers is made possible with AST-4000 host adapter kits.

Installation is as simple as unpacking the AST-4000 and plugging it into your Macintosh Plus.

And with our standard utility software, you'll find AST-4000 to be as intuitive and user-friendly as the Macintosh Plus itself.

Hard Driven For Success. AST-4000 is the hard-disk/tape-backup system that can make the Macintosh Plus a successful addition to your business. For a demonstration, visit your local AST/Apple dealer. Or contact AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714, (714) 476-3866.

AST-4000 Features

- 74-megabyte formatted Winchester hard-disk capacity
- Expandable to 370 megabytes with optional AST-4000 expansion units
- 60-megabyte tape backup
- 30-millisecond average-disk-access time; 5-megabyte/minute tape data transfer rate
- Backup/Restore by volume or file

AST-4000 trademark of AST Research, Inc. Apple and AppleTalk registered trademarks of Apple Computer, Inc. Letters

*Macworld readers write
of upgrades, color, the competition, and more*

Loyal to a Fault

Apple has done it again. The new Macintosh Plus is surely an improvement over the existing hardware.

While I applaud Apple for making sure that an upgrade path is available to the owners of existing Macintoshes, I rebel at the price. Let's take a look at the economics of upgrading a Macintosh.

The announced prices of the upgrades are \$299 for an 800K drive and new ROM, \$599 for a new motherboard with 1 megabyte of RAM and a SCSI interface, and \$129 for a new keyboard, bringing the total upgrade price to \$1027.

Assuming you paid \$2500 for your 512K Mac (as I did), upgrading to the Mac Plus will bring your total expenses to \$3527. A new Mac Plus costs only \$2599.

Apple has seen fit to reward early loyalty by charging \$928 to remain at the current Mac standard. I would feel much more loyal to Apple if they offered upgrades at their cost. The uproar over the old 128K to 512K upgrade had no effect.

*Richard Scotty
Spokane, Washington*

On the Other Hand

As an early (April 1984) Mac owner, I've never really understood why so many Mac owners are upset that the price has dropped. These decreases were predictable; computers were—and are—constantly improving and lowering in price. So are VCRs and audio compact disc players. I bought my Mac when I did because even at the inflated price, it was a good value for the money. Sure, I would not have minded saving a grand, but my productivity increased dramatically. The Mac paid for itself in less than a year.

*Shel Horowitz
Northampton, Massachusetts*

A Learning Experience

Last year my wife and I decided to investigate the purchase of a computer for the small businesses we run from our home. In addition, we felt the exposure of our two children, 9 and 11, to the uses of a computer would be beneficial. We purchased an Apple Macintosh last month and find a considerable amount of excellent business software but, alas, very little educational software. We are now wondering if we made a very expensive mistake. We find it difficult to believe that a company that produces a computer with so many positive points can overlook the educational software market. Ask yourself how many parents would spend the extra money for a better computer in the hope that their children will benefit. The market is there; why isn't someone cashing in on it?

*Frank D. Mathon
Taylorville, Illinois*

Radio Radio Radio

Recently I filed a petition with the Federal Communications Commission requesting that it create a new radio communication service to allow computers to exchange data in a local area network without cables or telephone connections. Before making a decision, the FCC waits to hear from the public. People who have something to say about my Proposal for the Creation of the Public Digital Radio Service can write directly to the FCC, Washington, DC 20554 (refer to RM-5241). For a copy of the petition, contact the FCC copy center at 202/857-3800 or see the copy on CompuServe ACCESS, file name FCC1.DOC.

*Don Stoner
Mercer Island, Washington*

User Nonchalance

Most reviews of Macintosh software include some wording like "makes full use of the Mac's graphic interface" or "thoroughly conforms to the Mac's user interface" or "extensive use of pull-down menu titles, dialog boxes, and so on... in typical Mac fashion." Initially there is nothing earth-shattering about these statements; anyone familiar with the Mac's operating environment would expect to find these points covered in reviews of Mac software. The profound significance begins to come out when the author expounds on these basic statements further into the review, stating, for example, "Anyone with some experience on the Mac already knows how to use 90 percent of this program; we never had to refer to the manual."

We all take this concept for granted. The statement "it moves forward when put into drive and stops when you apply the brakes" would not get much attention in an

(continues on page 45)

Hot Problem

Introducing System Saver Mac.

Ever put your hand on top of your Macintosh™ after it's been running a while? Pretty hot, isn't it? And that's a problem.

High temperature conditions can affect your computer's circuitry. Even shorten its lifespan. That's why we developed the System Saver Mac.

System Saver Mac keeps your Macintosh cool.

The System Saver Mac's quiet fan draws a breath of fresh air in through the ventilation slots on the bottom left and right sides of the Mac, across the circuit board, over the power supply (the primary source of heat), and out the top

ventilation slot (the one hidden under your Mac's handle) at the rate of 17 cubic feet per minute. It leaves your Mac cool, calm and running at top speed.

System Saver Mac stops the scramble for power.

No more reaching around to the back of your Macintosh to turn it on. No more fumbling for spare outlets. System Saver Mac organizes all your power needs. It provides outlets for two peripherals (like your printer and modem), while replacing the Mac's power cord.

Cool Solution

Available
June 1st

© 1986 Kensington Microwave

System Saver Mac has a great switch play.

System Saver Mac comes equipped with two switches — important for those of you who want to power one of your peripherals separately. For example, if you use a Hard Disk 20, you have to power up your hard disk first, before you turn on your computer. Just use one of the System Saver Mac's switches to control your hard disk and the other for the rest of your system.

Of course, we realize that many of you would prefer the convenience of a single switch to control your entire system. That's why every System Saver Mac also comes with a special single switch cap. Just pop off the two separate switches and pop on the single one provided.

System Saver Mac provides pure power.

70-90% of all microcomputer malfunctions can be traced to impurities in the electrical current. Line noise can be interpreted as data, confusing your Macintosh and causing annoying system errors. Power surges and spikes can do costly damage to its delicate circuitry.

System Saver Mac clips surges and spikes at a safe level and filters out line noise. It provides pure power to make your Macintosh more accurate, efficient and reliable.

System Saver Mac is not a completely new idea.

Clever, yes. Versatile, convenient and useful, yes. But not completely new. After all, we've been making the original System Saver for years. It's the best selling accessory ever made for the Apple II—chosen by over 1/4 million Apple II owners. We thought you'd agree—Macintosh owners deserve the best, too.

System Saver Mac, \$99.95, is available from Apple dealers everywhere. For the dealer nearest you, or to speak to a Kensington sales representative, call toll-free 800-535-4242. In NY 212-475-5200.

Kensington has a solution for every Macintosh™ problem. Maccessories®.

A whole family of enhancement products for the Macintosh™.

You'll find the perfect solution for every problem. From the complete power organization of a Control Center to the simple, portable protection of a Surge Suppressor. From the convenience of an A-B Box or Printer Stand to the comfortable relief of a Tilt/Swivel or Polarizing Filter.

Of course, the best way to solve problems is to prevent

them. That's why we make a complete line of Cleaning Kits and Dust Covers for your Mac.

That's also why we've just introduced the System Saver® Mac! Turn back a page to see this important new peripheral.

For a Maccessories dealer near you, for a free 12 page brochure, or to speak to a Kensington sales representative, call toll-free (800) 535-4242. In New York (212) 475-5200.

Win a free LaserWriter[™] from Kensington!

Sweepstakes Rules

1. This Sweepstakes is open to residents of the U.S., its possessions, and Canada. All federal, state and local laws apply. Void where prohibited.
 2. Employees of Kensington Microware Ltd. and their immediate families are not eligible.
 3. Taxes are the winner's responsibility.
 4. No purchase necessary to win. To enter, send a 3" x 5" card with your name, address, daytime telephone number, and the words "Kensington. Complete outfitters to the PC workstation." to: Win a Free LaserWriter Sweepstakes, Kensington Microware Ltd., 251 Park Avenue South, New York, NY 10010. Only one entry per envelope.
 5. Entries must be received by September 1, 1986. Any entries received after that date are invalid. The winner will be chosen September 30, 1986 and notified by October 15, 1986.
- If you'd like the name of the winner, send a stamped, self-addressed envelope to "LaserWriter Winner," Kensington Microware Ltd., 251 Park Avenue South, New York, NY 10010.

Win a free LaserWriter[™] from Kensington!

That's right — the most powerful peripheral ever made for the Macintosh[™] can be yours — FREE! And all you have to do to enter the drawing is something you'd probably do anyway...

Buy a Kensington System Saver[®] Mac — the most important peripheral ever made for your Macintosh[™]. (If you don't know about System Saver Mac yet, just turn back one page to our ad.)

When you buy your System Saver Mac, you'll also get a LaserWriter sweepstakes entry blank. Send that to us, along with the proof of purchase seal from the box and a copy of your sales receipt. And before long, you could be the proud owner of a LaserWriter!

Entries must be received by September 1, 1986 — so act now! The winner will be chosen September 30, 1986 and notified by October 15, 1986.

Complete sweepstakes rules on reverse.

Plantation, Florida

In Hard Disk Heaven

A committed MacFanatic for nearly two years now, I am also the proud owner of a new Apple Hard Disk 20. Forget that the HyperDrive is a little faster for the present; speed isn't everything. From anywhere in the HD 20's entire 20 megabytes you can open any document or application. I don't think you can do this with the HyperDrive without opening a particular volume. No volumes here, just straight storage. The new Hierarchical File System performs very well, allowing users to "nest" documents and applications in folders any way that suits their work habits.

Also, forget for the moment that Apple doesn't bundle a backup utility with the HD 20. It will. And if Apple doesn't, rest assured that a slew of third-party developers are laboring over such programs at this moment. Conversely, I suspect that no one but the HyperDrive manufacturer continues to improve its utilities. Nothing against General Computer Company here, or any other hardware supplier. I'm just glad I waited for Apple's unit. History has shown that the industry responds quickly to Apple products. Witness the Macintosh itself.

In short, I am pleased with the Apple unit. It's quiet enough, reliable so far, and very easy to use. And as for having innumerable applications and documents available in seconds? It's a Macintosh user's dream.

Ric Spiegel
Dallas, Texas

A Taxing Error

In "Taking Care of Taxes" in your March 1986 issue, you printed the wrong phone number for our product, *TaxWizard* '85/'86.

Linda Brandt
Santa Monica, California

The correct information is Gamma Productions, Inc., 817 Tenth St. #102, Santa Monica, CA 90403, 213/451-9507. —Ed.

We Stand Corrected

Mr. Bunnell's reverie on his trip to China ("The China Interface," *Macworld*, February 1986) certainly reveals his abilities as a high-tech prognosticator. Indeed, he may soon be writing syndicated columns, à la John C. Dvorak. However, may I suggest that the population of the People's Republic of China may be 4 or 5 times as large as that of the United States, but it is not 15 times as large.

Robert Matutat
San Francisco, California

You are so right. The 1985 edition of the World Book Encyclopedia lists the estimated population of the United States at 238,420,000 and China at 1,047,800,000. —Ed.

Regaled by the Tales

I just received my February issue of *Macworld* and completed reading Jeffrey S. Young's article, "Tales of the Macintosh." I was warmed by the story of Steve Jobs and his dream. I have read so many articles that discount and cheapen Apple's Macintosh story that it was refreshing to read this version that shows a bit of the bad but mostly the good of a truly wonderful entrepreneurial event. Steve Jobs and his group may have been young, idealistic, and inexperienced, but their intelligence, personal fortitude, and most importantly their imagination and enthusiasm truly set them apart.

Stacie Lyn Groff
Bellevue, Washington

Déjà Vu

As I read David Bunnell's editorial (January 1986) that maintained the Macintosh doesn't need color and won't until color on a computer screen becomes acceptable and can easily be displayed on a printer, I was saying amen and hallelujah because that's pretty much my opinion (I like the Mac's crisp black-and-white display) until I came upon this sentence about Commodore's Amiga: "Why buy a machine with an entirely new operating system and no software base?"

NOW YOU BUSINESS CAN DO MORE

ODESTA
HELIX

The Helix environment from Odesta Corporation is based on the idea that, above all, systems should be responsive to the needs of the people they serve. That whatever stands between you and the information you need is an obstacle, not a feature. That technology should narrow the gap — enabling you to do what you do best, and to get it done quickly.

Helix is a data-based applications environment, since the core of any business system is most properly a data-based foundation.

Helix has evolved — in response to a year of learning what you have been doing with Helix; from listening to you tell us what you want next; through exploiting opportunities afforded by advanced technology.

Helix is an active, evolving environment. Today, Helix addresses the full range of business needs. Double Helix — development of tailored, secure applications. MultiUser Helix — sharing information in a multiuser network. RunTime Helix — runtime generation for applications publishing. Remote Helix — off-site access to the corporate information base.

Helix is a complete data-based information management and decision support system. It provides a data-based “pool” into which you can put all kinds of information — text, numbers, pictures or ASCII data-communications.

Helix — the system solution

Once information is entered, it is then just as easy to examine from any angle, and use in any application. From reports, lists, and mail merge letters to analyses and interactive searches. All within Helix.

Programming not required

You don't have to learn a query language, spreadsheet formulae, report formatting or data-base algebra. You don't have to know a programming language or battle with command codes, modes, or imposed structure.

All you need with Helix is the desire to improve your business management and administrative systems.

\$395

ODESTA
Double**HELIX**

Custom menus and more

Now you can develop and then customize even more new, powerful applications. To the Helix environment, Double Helix adds subforms, the fast creation of custom menus, password protection, data validation, extended data import and export capabilities, and optimized performance characteristics. Of course, anything already built with Helix version 2.0 may be automatically updated to Double Helix.

Build it up, lock it down, keep the key

Double Helix lets you design a complete system to run a small business, medium office, or large departmental project. Custom menus then make the whole system easy to use by clearly associating forms with functions. Password protection lets you lock it down to prevent unauthorized changes. Yet, since one of the main features of the Helix environment is its ability to change as conditions change, you or your key users can easily make modifications on an as-needed basis.

\$495

A system that you can mix and match, and that expands as your needs grow. For co

AND YOUR OF WHAT YOU DO BEST

MultiUser^{ODESTA}HELIX™

The promise of a network

The idea of running a business using shared information in a direct and affordable way has been one of the premises and promises of the "computer revolution" since it began. In a number of important respects, MultiUser Helix is the first fulfillment of that promise.

Just plug it in

You don't have to worry about a "file server" or other special hardware or software. MultiUser Helix turns any hard disk into the host for a whole network. Just by using the "visit" command, you can be working within a dynamically interactive network, in which all windows are updated automatically.

The benefits of a breakthrough

With MultiUser Helix, everyone within a company or department can work from common project, inventory, customer, ordering or financial information. The direct benefits from both an operational and management perspective are dramatic.

\$695-\$2500

RunTime^{ODESTA}HELIX™

Now, you can publish your own Helix applications with RunTime Helix. Any application built with Double Helix can be run through the runtime generator, creating a stand-alone program for sale or distribution.

Start a whole new business

If you are an existing VAR, or an up-and-coming entrepreneur, here is the opportunity to leverage the dynamic attraction and functionality of Helix applications into a wide range of new business.

The birth of applications publishing

Or you can easily provide a variety of applications to others within your organization — from expense reports to sales tracking; from departmental phone lists to project coordination.

By offering an organizational site licensing program for RunTime Helix, Odesta helps you bring a new dimension to the concept of "desktop publishing" — the in-house publishing of specialized applications.

\$500/10 applications
(site license available)

REMOTE^{ODESTA}HELIX™

Close the circle with Remote Helix — the way to communicate with your central Helix information base from the field, home, or satellite office — anytime.

A modem, and then magic

You can modem straight into your "central" Helix, and be immediately on-line... as if you were working directly in your main office. And, if you are running a MultiUser Helix environment, Remote Helix will log you on as a live member of the network.

System access from anywhere

Receive orders from, or transmit information to, your sales force in the field; tie sites together for communication and coordination; or have 24-hour access to the heart of your business, no matter where you are. With Remote Helix, global telecommunication becomes an information management tool for you to use, now.

Letters

(continued from page 45)

Mr. Bunnell's memory may be short, but I remember people telling me, "Don't buy a Macintosh. It's got a new operating system that's different from all the other Apple computers, and the only software for it is *MacPaint* and *MacWrite*."

Jennifer Petkus

Colorado Springs, Colorado

Color It Sold

I fully agree with the January 1986 article by Mr. Bunnell on the case against introducing a color version of the Mac too early. However, there is an important consideration that he did not cover: color, like sex, sells. Why else would all the laundry detergents be packaged in the most splendid, eye-catching colors possible? Even if it costs an arm and a leg, a high-end color console might just pay for itself by selling the cheaper goods. Sounds a bit mercenary, but it works.

Bob Hall

Seattle, Washington

A Shade of Blue

I was greatly disappointed by David Bunnell's column in the January issue of *Macworld*, especially some statements reminiscent of the things the IBMers said about the Mac when it first came out.

Contrary to what the column said, the color on the Amiga is far and away better than the resolution on the IBM. A demonstration of the *Masterpaint* program clearly shows this.

I could not believe that Mr. Bunnell asked, "Why buy a machine with an entirely new operating system and no software base?" Only a year ago Mr. Bunnell said, "Unfortunately, computer critics tend to predict with blinders on. They can't understand why the Macintosh sells so well, and they continue to moan about the lack of software for the machine" (*Macworld*, December 1984).

I hate to think that the Mac community has become as nearsighted and entrenched as the IBM blue suit crowd that we scoff at. Please promote the Mac based on its merits, not on the alleged faults of other computers.

Dennis Boyd

Monmouth Junction, New Jersey

(continues on page 51)

The C for the Macintosh

*"Library handling is very flexible...documentation is excellent...
the shell a pleasure to work in...blows away the competition
for pure compile speed...an excellent effort."*

COMPUTER LANGUAGES, 4/85

Why Professionals Choose Aztec C

Professionals choose Manx Aztec C development systems because they are the most powerful, portable, and professional microcomputer C development systems available. Professionals know that Manx Aztec C offers the features, dependability, and performance required for producing professional results.

Applications implemented with Aztec C development systems range from real time control of robot arms used in manufacturing, to message switching systems, to games, languages, operating systems, and business systems.

Much of the commercial software for the Apple Macintosh including top selling titles from software publishers Broderbund, Hayden Software, and Spinnaker is developed using Manx Aztec C.

Value, Performance, and Flexibility

Manx Aztec C68k for the Macintosh is available as a line of three upgradable development systems: Manx Aztec C68k-p, Manx Aztec C68k-d, and Manx Aztec C68k-c. Student, non-commercial, and small business discounts are available. Whatever your budget and requirements, there is a Manx Aztec C68k development system that offers you the best value and performance for your investment.

New Macintosh Mouse Interface

The highly acclaimed, powerful, and professional Manx Aztec SHELL development environment now includes a mouse interface. Developers unfamiliar with UNIX or MS-DOS can work entirely with the mouse interface. Those interested in learning the advanced features of the SHELL can do so at their leisure. Developer's familiar with UNIX or MS-DOS can ignore the mouse, if they so choose, and work entirely in a familiar command driven environment.

Aztec C, The Most Portable C.

Manx Aztec C Development Systems are available for the Apple Macintosh, Apple II, IBM PC, PC compatibles, CP/M-80 systems, Radio Shack Systems, and the Commodore 64/128. Manx Aztec C is also compatible with UNIX and UNIX ports. Manx currently is developing systems for the Amiga and other microcomputer systems. No other C Development System for the Macintosh comes close to the portability of Manx Aztec C.

Power To Spare

In benchmark after benchmark, Manx Aztec C appears in column after column as the clear winner.

The following sieve benchmark timings are reprinted with permissions of Computer Languages, 131 Townsend Sr., San Francisco, CA 94107 from a Macintosh review that appeared in the April, 1985 issue:

compiler	compile/link	run	size
Manx Aztec	49	7	13,274
Megamax	114	7	13,816
Softworks	201	9	46,914
consulair	152	10	17,654
Hippo 2	102	13	30,648

The following sieve benchmark timings are reprinted with permission of Macworld, 555 De Harro St., San Francisco, CA 94107, from the May, 1985 issue from "Mac Wins By a Length" in the Open Window column.

Language	Run Time
Aztec C 1.06C	6.55
McFORTH 2.0	20.01
Modula-II	71.60
MBASIC 2.00	1170.00
Pascal	1270.00

Sieve timings for Manx Aztec C68k 1.06g:

with register variables 3.37 secs 5,007 bytes
without register variables 6.02 secs 5,140 bytes

Manx Aztec C68k - Professional Tools

Manx Aztec C68k is bundled with a rich abundance of tools to help produce superior results in reasonable time frames. The following is a list of features and facilities included in Aztec C68k-d, the Developer's System, and Aztec C68k-c, the Commercial system. Items that are marked -c are unique Aztec C68k-c.

Optimized C	Mouse Enhanced SHELL
UNIX-like SHELL	Creates desk Accessories
Macro Assembler	Creates Clickable Applications
Smart Overlay Linker	Phone Support
C-PASCAL Interface	PASCAL-C Interface
Resource Compiler	UNIX Library Functions
Debuggers	Terminal Emulator (Source)
Object Librarian	Easy Access to Mac Toolbox
Mouse Editor	unlimited code size
IEEE floating point	six register variables
Inline assembly	extensive sample programs
600 page manual	hard disk support
no license fees	PASCAL type strings
Macintosh support	AppleTalk support
code optimizer	symbolic debugger (512k)-c
MacRam Disk-c	UniTools (ul, make, grep, diff)-c
Library Source-c	One Year Of Updates-c

Summary

If you plan to program in C on the Macintosh or are currently doing so using a brand x C compiler, there is a Manx Aztec C68k system for you that offers the best value and the greatest degree of portability, power, and professional quality available.

Look around, evaluate, and compare. The more you look, the more you compare, the more you will see that Manx Software Systems has succeeded in its objective to provide you with the best C development system available at the best possible price. Then, give us a call, and join the 25,000 users who already know and enjoy the Manx Aztec C advantage.

Products and Prices

Aztec C68k-c Commercial System	\$499

The Graphics Magician®

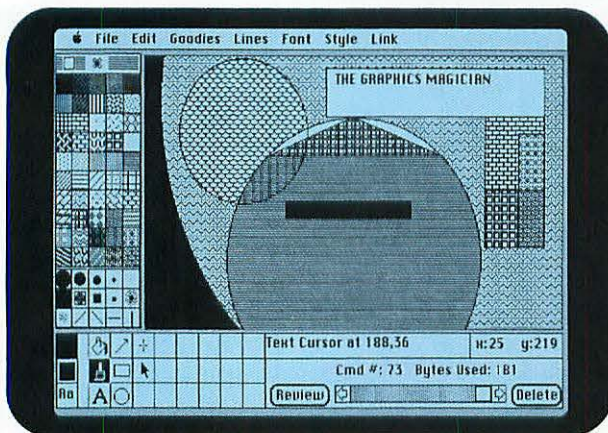

PAINTER AND ANIMATOR

for the Macintosh by Eagle Berns and Roger Lawrence

ANIMATION

Create and choreograph animated shapes as small as a few pixels or as large as the entire screen. Clip shapes out of MacPaint images, or draw them yourself . . .

COMPACT PICTURES

Draw pictures that require only a fraction of the space normally taken (instead of saving images, The Graphics Magician saves the artist's moves) so hundreds of pictures fit on a single disk!

USE IT IN DEMOS, PRESENTATIONS, OR YOUR OWN PROGRAMS!

Like most other "animation" software, you can create demos and presentations. But with The Graphics Magician, you can also access and control everything from your own programs!

Calling and controlling the animation and graphics routines from BASIC, Pascal, or machine-language is simple!

Furthermore, The Graphics Magician is not copy-protected, and we do not charge a licensing fee for use in your own software (we do require an acknowledgement).

Discover why The Graphics Magician for the Apple II is the end-users' favorite graphics software (Softalk Readers Poll 1983, 1984, A+ Readers Poll 1985). And how it's so much better on the MAC!

See it at your favorite store or phone (800) 323-0884.

(continued from page 48)

Beware the Red Herring

I use a Mac at work, but I recently decided to buy an Atari 520 ST after considering both the Mac and the Amiga. In all my encounters with the Amiga, I've never seen a black-and-white monitor made specifically for it; David Bunnell must have been thinking of the Atari ST when he referred to the monochrome monitor in his January column.

The way Mr. Bunnell dwelt on the Amiga, I got the impression that he considers it the major competitor to the Mac. With the Atari 520 ST's \$795 price tag, the power that it represents, and the head start it has on software, it will prove to be a greater threat, I think.

Larry Kelly
Pasadena, Texas

Don't Judge This Book by Its Color

I agree with much of what David Bunnell said in his January column concerning the present state of color graphics on personal computers. Color is not the only difference between the Mac and the Amiga, however, and I think you are underestimating the Amiga.

The Amiga has three custom chips that take much of the processing load for sound, graphics, and disk I/O off the 68000. The result is that the 68000 in the Amiga can be dedicated almost exclusively to the execution of programs, instead of the housekeeping tasks that the 68000 in the Mac spends almost half its time handling. Also, the fact that Apple put a disk controller chip on the recent Mac upgrade shows that Apple is realizing the value of unfettering the 68000. The Amiga operating system is truly multitasking; even the Mac with the *Switcher* cannot claim that. The Amiga has the potential to do everything that the Mac does, and probably faster.

Stephen G. Heyl
Washington, D.C.

Competition Is the Mother of...

I believe we need the Amigas and the Ataris to spur on Apple to create a system that is an example of what Apple can really do.

Charles Pritt
Irving, Texas

SPECIAL

MultiWrite \$79

From MindWork Software

MultiWrite sets a new standard for Mac writing tools with a word processor and an outlining program built into one smooth package. MultiWrite is MacWrite compatible, including the same fonts and types, and adds the ability to create outlines. Unlike other outliners, MultiWrite makes it easy to switch headers for text and viceversa. Instead of waiting to cut and paste, you move paragraphs

ReadySetGo \$125

From Manhattan Graphics

ReadySetGo's latest version is a sleek addition to the field of desktop, or personal, publishing. If

you've ever wanted to create your own newsletter and reports, ReadySetGo will make it easy to get off the starting block. It's easy to create text in ReadySetGo's internal word processor. Documents can be easily linked together and graphics can be easily added up to the last minute. ReadySetGo offers incredible speed due to RAM-resident operation, and offers a capacity of 40 pages. It supports nearly any printer you can think of, including the Allied Linotron typesetter. Get ReadySetGo and your documents will look as good as you've ever imagined!

Top Mail \$250

From Top Express

Here at Icon Review electronic mail is vital and in our book Top Mail is, well, tops. It's the only E-mail program that installs directly into the Mac as a desk accessory, and doesn't require a hard disk. It's instantly available for

transfer of any Mac file including text, pictures, spreadsheets, and even whole applications. Unlike other electronic mail programs, you don't have to worry about setting up both ends of a communication. Even if the receiving computer is turned off it can handle your message. Other conveniences include no limit to the number of users and no copy protection scheme on the disk. At last you can get the convenience and ease of E-mail on your Mac network!

It's All Here in Black and White

Like some of Apple's marketing strategy, David Bunnell's January 1986 column hit the target but missed the bull's-eye.

The fact is that routine business communications produced on paper must be printed in black and white.

The reason: there's no practical way to routinely make 20 or 10 or even 3 copies of anything in color. Period.

When the end product is to be in black and white, no competitor can touch the Mac's flexibility and sophistication.

Roger Oliver

St. Louis, Missouri

While there is still nothing as fast as a Xerox machine for printing color Mac documents, the new ImageWriter and NEC's CP2 printer do generate color printouts (see "Color Commentary," Macworld, January 1986).—Ed.

A Yen for Accuracy

In the article "One Day in the Life of Japan," which appears in the January issue of *Macworld*, you have added one too many zeros to the yen amounts or one too few to the dollar amounts. No way are there 2250 yen to the dollar! The dollar has been strong lately, but not that strong.

I'm glad that the person who figured the currency conversions for the article doesn't work in the bank where I change my yen to dollars.

G. F. Lukos

Arlington, MA

In this case our mistake resulted from failing to follow the proofreader's maxim "Check and double-check." We transferred our Macintosh text files—which showed the correct yen values of ¥5000 for a pound of tuna or an hour in the hotel—to the IBM PC WordStar files that our typesetter requires. However, the yen symbol (¥) that is available on the Macintosh keyboard does not translate directly, because there is no such symbol on the IBM keyboard. The IBM interpreted the code for the yen symbol as 4, probably by reading the first few bits of the ASCII code for the symbol. If you transfer files, keep an eye out for such unexpected results.—Ed.

Drive 16 Macs 50 Times Harder

The MagNet™ 20x MultiUser External Hard Drive

The Mac Plus and 512k Solution

Mirror Technologies MagNet 20x™ offers speed, portability and great software to provide you with the most powerful single or multiuser hard drive available. The MagNet 20x™ plugs straight into your Mac Plus SCSI port or with our FastPort™ option you can inexpensively get "Plus" performance out of your 512k.

Rugged Design/One Year Warranty

The MagNet 20x™ hard drive is specially designed to withstand treatment that would "crash" the competition. The patented drive head lifter in the MagNet pulls the read/write heads away from your precious data upon power off. This means large storage and high confidence are not mutually exclusive.

Midget Size, Monster Performance

The MagNet 20x™ is packed with features. Our software allows multiuser access, print spooling, disk cache, password protection for files, volume partitioning, multitasking and full or incremental backup of your data. What all this technical jargon means is that as your computing needs grow the MagNet 20x™ has the power built in. No upgrades necessary, it's *all* there.

We Give Great Software

MacServe™ from Infosphere™ is included with every MagNet 20x™...free. A \$250.00 value. MacServe includes great single user features but also allows multiuser access to your Mac. Imagine the value of sharing data and peripherals with other Macs in the office. Don't spend money on unnecessary printers and hard drives. The MagNet 20x™ will make the most of the equipment you already own.

Mac Plus Power for your 512k?

With our FastPort™ option you can add the speed and SCSI capability that the Mac Plus has to your existing 512k without replacing your motherboard. The FastPort™ installs easily with no modifications to your Mac. FastPort™ is also inexpensive, you can have the performance and speed of the Mac Plus for less than one-fourth the price of the Apple upgrade.

What Price Power?

A lot less than you would expect...Hundreds less than the HD 20. Mirror Technologies designs storage devices exclusively for the Macintosh. This is why we can offer so much value for so little money.

The Macintosh drive experts.

Omission Accomplished

After reading *Macworld's* special winter edition, I was distressed to find that our product—MacFORTH—was not included in the "Business Software Review" list. What happened?

Christine Colburn
Rockville, Maryland

We apologize for the oversight. With more than 400 business programs to categorize, we were bound to miss a few. Readers who would like information on MacFORTH should contact Creative Solutions, 4701 Randolph Rd. #12, Rockville, MD 20852, 301/984-0262. —Ed.

Filing Fault

The recent article on *Helix* ["Files of Icons and Tiles," November 1985], the relational database system produced by Odesta Corporation, was certainly all-inclusive, but only of the program's positive attributes.

No mention was made within this six-page report of any of the disadvantages of this program, such as its significant inability to save calculated fields. Because of this drawback, it is impossible to produce three-across mailing labels, which is an amazing deficiency in such a sophisticated system. *Macworld* should feel a need to provide for its readers not only the pluses but also the minuses of featured programs.

Dave Edmiston
Sacramento, California

Perhaps you have an early version of *Helix*. We reviewed version 2.0, in which you can post calculated fields. Although not as convenient as some other programs, such as *OverVUE*, which lets you choose the type of labels from a menu, you can produce three-across mailing labels within a *Helix* template icon. Simpler file management programs are generally better suited to mailing applications than a data analysis program such as *Helix*. —Ed.

Letters should be mailed to Letters, *Macworld*, 555 De Haro St., San Francisco, CA 94107, or sent electronically to *CompuServe* 70370,702 or *The Source* BCW440. We reserve the right to edit letters. All published letters become the property of *Macworld*. □

Drive 16 Macs 50 Times Harder

The MagNet™ 20 Meg MultiUser Internal Hard Drive

The MagNet 20™ Hard Drive

Mirror Technologies introduces one of the most powerful Macintosh hard drives available. The MagNet 20 combines great value, expandability, speed and portability to give your Mac amazing capabilities.

This Internal Hard Drive Is Fast And Portable

Mirror Technologies has teamed up with Infosphere, to develop a special version of MacServe™ (XL-Serve, the predecessor of MacServe, is the **most** popular AppleTalk™ network software in the world!) MacServe software adds all of the capabilities and features of the best Mac hard drives available today, plus the ability to share peripherals, programs and data with multiple computers. As your needs grow the MagNet 20 already contains the power and versatility to handle your computing to go.

Packed With Features

The MagNet 20 allows you to print spool, disk cache, protect files with passwords, partition volumes and fully or incrementally backup your data. The MagNet 20 is the most powerful single or multiuser storage solution available today.

Rugged Design/One Year Warranty

The MagNet 20 uses a hard drive specially designed to withstand treatment that would "crash" the competition. The patented drive head lifter in the MagNet 20 pulls the read/write heads away from your precious data upon power off. This means you and your Mac can travel with confidence.

The Powerful Single User Solution

Purchase the MagNet 20 as a **very** powerful single user drive and simply add the inexpensive AppleTalk network cables to allow multiple Macs to access shared programs, data and peripherals!

Multiuser Capability at a Single User Price

Stop in at your nearest Apple authorized dealer for a demonstration of the MagNet 20.

Drive 16 Macs 50 times harder.

You Can't go Wrong with MacLightning.™

MacLightning™ is the first RAM-based interactive Spelling/Grammar checker for Macintosh.™

Whether you're using Microsoft Word,™ Excel,™ MacWrite,™ Jazz,™ or any other Macintosh program, MacLightning watches your every move and beeps when you make a mistake.

Once alerted to an error, you can find the correct word by hitting one key. And correct it the same way. Or if you'd rather check your work at the end of a session, MacLightning will check a section or an entire document with a click of the mouse. With a top speed of 60 + words per second, it's the fastest road to a perfect document.

MacLightning remembers the words that are important to you. Any word, name, place or abbreviation can be added to the Dictionary with a single click. And that's not all!

Soon you'll be able to add additional Data Libraries such as encyclopedias, medical, legal and scientific references and technical dictionaries. Just choose the Library you need, and it's business as usual . . . without the mistakes!

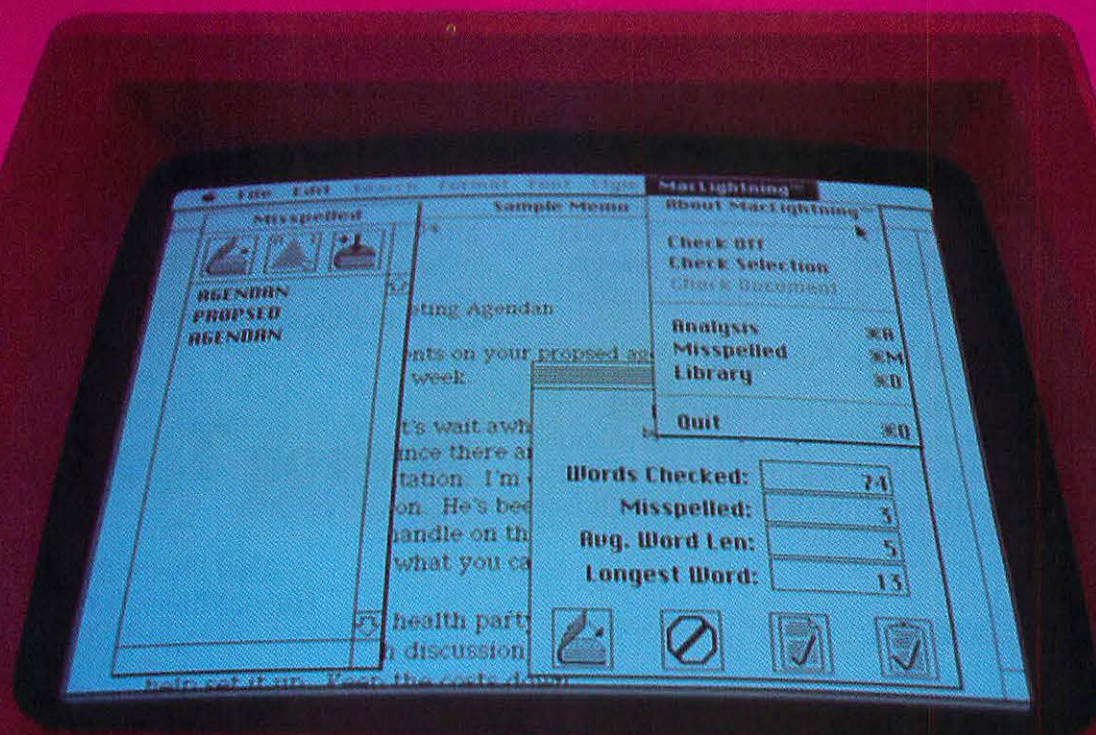

So before you go wrong, stop by your local dealer and go right with MacLightning™!

Requires 512K Macintosh. \$99.95

INTERLACE THE MACINTOSH DATABASE

INTERLACE™ COMBINES RELATIONAL DATABASE POWER WITH THE EASE OF USE OF A FILE MANAGER

Simple filing products though easy to use, lack the power to handle multiple-file applications and the calculations required to perform useful tasks.

Most power databases require that you become a programmer before even the simplest task can be done. But now Interlace is here...

LINK DATA IN MULTIPLE FILES

Interlace is the only program which allows you to visually define your database by drawing connections between files. **Adam Green, Infoworld:** "...Really uses the visual strength of the Mac to produce a database design tool."

VISUALLY DESIGN FORMS AND REPORTS

Report design is freeform, place fields and pictures anywhere on the page. Choose your own fonts and styles. Reports can access multiple files and other reports using spreadsheet-style formulas to build practical applications. **Stewart Alsop, PC Letter:** "...Bridge[s] the gap between the pretty programs and the power programs."

INCLUDES THESE POWERFUL APPLICATIONS

- Client Billing
 - Stock Portfolio Management
 - Checkbook
 - Parts Explosion
 - 1040 Tax planning including Schedules A, B, and D.
- Esther Dyson, Release 1.0:** "Interlace is a stunningly wonderful application generator/dbms."

Suggested retail price is \$139. Order now and get Interlace at the special introductory price of \$95. Backed with a 60 day money-back guarantee.

**STARE AT THIS
FOR 18.5 SECONDS.
THANK YOU.
YOU'VE JUST DEMONSTRATED
THE BEST REASON
TO OWN A HYPERDRIVE.**

It takes 18.5 seconds to start MacWrite on a regular 512K Macintosh. And only 5.5 seconds on the world's fastest Macintosh—namely, one with HyperDrive. (Which will work with either the 512K Mac or the Macintosh Plus.)

To demonstrate the second best reason to own a HyperDrive, stack fifty diskettes atop one another. HyperDrive holds up to that much data without enlisting outside help from any diskettes at all.

The next demonstration will require a little imagination. Imagine a Macintosh with software that protects

your data against loss by copying it onto diskettes. A print spooler that lets you go on to other jobs while your printer is occupied. And a security program that protects your files from unauthorized entry. You've just imagined a Macintosh with HyperDrive.

The next demonstration requires no imagination at all. Just stare at your Macintosh. Since HyperDrive is the first hard disk that's installed inside the Mac, it also preserves the Mac's appearance and portability.

But for the most convincing demonstration of all, just perform this

simple operation: Visit an authorized General Computer dealer. He'll show you all the reasons why HyperDrive is, in the words of Macworld, "the happiest marriage of the Macintosh and a hard disk."

For details, call us at (800) 842-9000, Ext. 7 or (800) 843-9090, Ext. 7.*

Macworld View

Software entrepreneurs join forces, the Mac ends cramming at vet school, and more

Daniel Farber

Animal Farm

Out in the flatlands of east central Mississippi, far from the civilizing influence of the great river, amidst mountains of kudzu and acres of dairy farms, is Mississippi State College. You're forgiven if you don't think of Mississippi—especially Starkville, where the college is located—as a hotbed of Macintosh innovation. But think again. The Macintosh is making inroads in all corners of this country, and Mississippi is one of those corners.

Mississippi State has the first veterinary school in the country to require Macintosh computers (or, for that matter, computers of any kind) of its entering students. For the past two years, entering classes at the sleek, multimillion-dollar facility have brought Macs with them to their dissection classes. The school is developing an innovative approach to medical education that may become a model for other schools. Instead of focusing primarily on the development of courseware, Mississippi State has opted to use the computer in education for something for which it's uniquely suited—as a diagnostic database.

"This is a new college—it was founded in the late seventies—

so when we set out to design the curriculum, we weren't limited by the past," explains Dr. Philip Bushby, a professor at the school and the prime architect of the computerization scheme. "We took a hard look at the curriculum expected of a veterinary student to pass the national boards. We realized that there were 216,000 facts that candidates were expected to

master—that's one new item every 6 minutes, 24 hours a day, for the first three years of the four-year program. And that's just today. What about in ten more years?"

The faculty and administrators concluded that the knowledge explosion required a rethinking of the goals of education. "We realized we could no longer eliminate ignorance but should try instead to teach our students how to deal with their ignorance," say Bushby.

A veterinary student takes symptoms straight from the horse's mouth and records them on the Mac to arrive at a diagnosis.

"And using the Macintosh as a knowledge repository, with upgraded disks of information going out to vets as an ongoing, lifelong process, is the way we're looking at the computer age."

(continues on page 65)

How To Make Your Maccing Faster, Easier, and a Lot More Fun!

Tempo macros speed your work or play on the Macintosh.

Record any series of Macintosh commands or keystrokes and Tempo will play them back, at top speed, every time you need them. With a single key code, you can execute a macro that replays an unlimited number of commands.

Add intelligence to your Macintosh software

If a macro needs to be performed 27 times in a row or every 15 minutes, Tempo will do that. If it depends on whether a number starts with a "\$" or if a name is greater than "Jones," Tempo will read it and decide which way to branch. Tempo can even determine if it needs to *branch to another program*. Tempo will close the program you're in, open the other, and continue replaying your commands. Automatically. Exactly as you require.

Edit your macros for changes or corrections

You may edit Tempo macros the same way you create them – click to edit, click to change, click to save. Tempo has no complex programming language, simply step-by-step menu commands and dialog boxes.

What you can do with Tempo

- Reduce complex commands to a single keystroke.
- Automate moving information from one program to another.
- Have Tempo wait until the time you specify, then perform multiple tasks on your Macintosh – unattended.
- Guide new users through programs, prompting them with dialog boxes along the way.
- Distribute time-saving macros to other members of your company.
- Customize programs to work the way you need them to.
- Simplify, automate, customize, modify, design, and create in a million different ways!

Intelligent macros for the Macintosh.

Other Tempo features...

- Pause during a macro replay to enter text or make a selection.
 - Record macros up to the limits of your disk space – hard drive or floppy.
 - Assign up to 450 keyboard commands in each application.
 - Use Command key codes or Option key codes.
 - Replay in slow motion, in real time, or at high speed.
 - Connect macros together, nested, branched or sequentially.
 - Repeat the macro *if* or *until* it sees the specified text, or *for* a required number of times.
 - Tempo works with nearly every Macintosh program.
 - For the 512K or larger Macintosh and Macintosh XL.
 - Works with all hard disk drives.
 - Tempo is not copy-protected, so you can easily install it on your hard drive.
 - If you're not absolutely happy with what Tempo can do for you and your Mac, return it within 90 days for a complete refund.
- We guarantee your satisfaction.
For \$99, you get more macro power than a micro has ever had before.

Call 1-800-255-5550 x425 **right now, today!**

1050 Walnut Street, Suite 425
Boulder, Colorado 80302

Animal Farm (continued)

The key item in Mississippi State's scheme is a kind of expert system designed for medical purposes called the Problem Knowledge Coupler, or PKC. The program involves a querying database approach that is structured to allow doctors to answer yes or no diagnostic questions about an animal's health. After the doctor answers the questions, PKC lists possible diagnoses, along with statistical information showing how closely each possible diagnosis matches the animal's symptoms.

One important advantage of the PKC is that the diagnostic modules can include extremely rare diseases that only a specialist would catch—and put that knowledge into the hands of every generalist.

The diagnostic modules are developed one at a time and then sent out to working vets on disks. The long-range goal of the school is for all the vets in the state (and ultimately the country) to use Macs with hard disks running the PKC program. Information can be added to diagnostic modules as it is developed, and updated versions of a module can be sent out as needed.

As far as courseware goes, *Filevision* and *FactFinder* are popular with a number of the professors, and many of the anatomy classes use *Filevision*

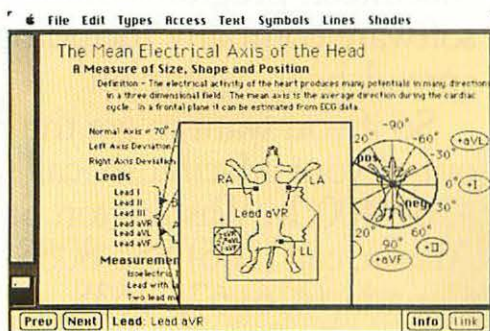

documents that have been created in the past two years. *Filevision* is ideal for storing the mix of anatomical charts and data required of a vet. Throughout the freshman and sophomore labs—big, open rooms with lockers, dissection tables, and cubicles—Macs can be found built into custom-designed stands. Students work on dissections with *Filevision* pictures nearby on their Mac screens, referring to the documents that other classes have produced and which are now part of the college's library or creating new files as class assignments. The project has been so successful that one of the professors, Dr. Nelson Westmoreland, has won several awards from Telos, the maker of *Filevision*, for his anatomical database applications.

What is especially impressive about the Mississippi State operation is that it was developed outside of the Apple University Consortium—Apple's college program. A single college with only 40 students per class and a few hundred in all, Mississippi State has nowhere near the numbers required for the consortium. But that hasn't stopped the veterinarians, and Mississippi State is now being visited by representatives of other schools from around the country. Presently discussions are taking place on how best to distribute the Knowledge Coupler modules that several schools besides Mississippi State are planning to produce.

—Jeffrey S. Young

Veterinary Courseware

At Mississippi State's veterinary school, Business *Filevision* is used to provide electronic databases of anatomic and medical information.

Television producer Bob Fraser on the set of "Benson."

Television Storyboards

Bob Fraser, producer of TV's "Benson," admits to being inspired by the *Macworld* issue devoted to the Macintosh and the movies (March 1985). But he has gone far beyond using the Macintosh for writing and scheduling. He now employs a video camera, a digitizer, and Hayden's *VideoWorks* to create animated storyboards and presentation graphics.

"Drawing storyboards used to be one of the most difficult parts of my job," says Fraser. A storyboard is a set of drawings showing individual camera setups—the first step in visualizing a script. Before the Macintosh, Fraser drew rough sketches with stick figures and then gave the sketches to an artist for another rendering. "Often the sketches went back and forth between myself and the artist several times until I got what I wanted," says Fraser. "It was a mess."

Fraser started out with one Macintosh and an Imagewriter, writing scripts with *MacWrite*, charting the status of each episode with various programs,

and drawing storyboards with *MacPaint* and *MacDraw*. He soon added the digitizer and learned to use it with both a video camera and a video-cassette recorder. "I freeze-frame any image I want from the VCR and use the Macvision digitizer to transfer the image to the Macintosh," explains Fraser. "That way I can create storyboards with realistic backgrounds and characters."

The producer and former actor and theater manager now owns three Macintoshes: one for home, one for the office, and another for his two grade-school daughters—"To keep them away from mine at home." Fraser has also added an Apple LaserWriter to his system. For mass storage, he's attached a 5-megabyte Bernoulli box to his home system. But the final piece in the puzzle of creating realistic animation is *VideoWorks*, from Hayden.

"That program really allows smooth animation. Now I can

New
Faster Version 2.1

The most BASIC.

Microsoft® BASIC is the language spoken by nine out of ten microcomputers worldwide. It's the language with the most programs written for it.

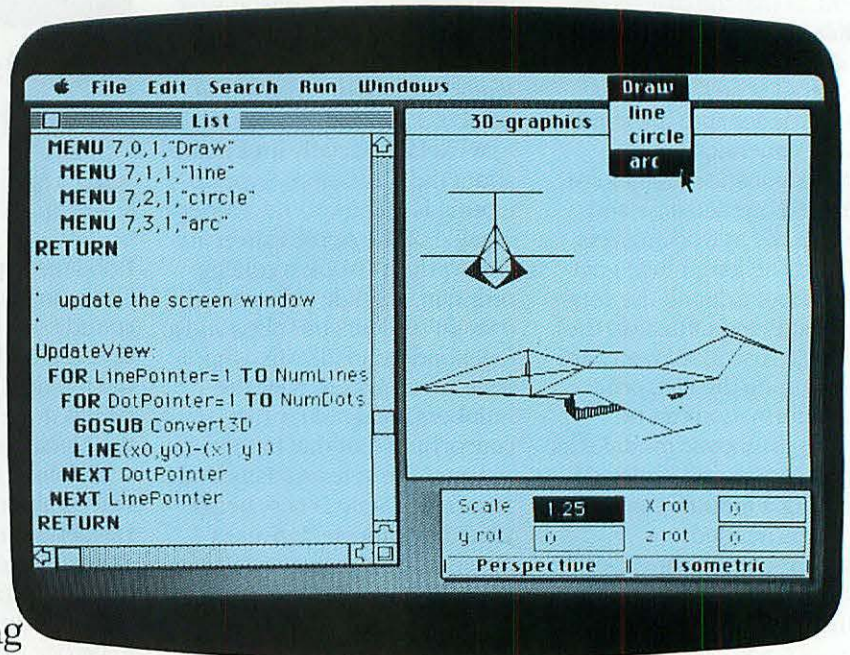

So if you want to access the power of your Macintosh™, only one language makes the most sense. Mac's first language, Microsoft BASIC.

Not only is it the industry standard, it's the most advanced BASIC for Macintosh. It lets you add mouse commands. Graphics. Windows. Change type fonts and styles. Customize menus. Incorporate music and sound effects. Write your own dialog boxes. Basically, it lets you take advantage of everything that makes Mac 'Mac.'

It makes editing programs as easy as cutting and pasting and pointing and clicking. Debugging is easier

than ever with the advanced trace command.

It's no wonder Microsoft is the most logical choice for the Macintosh.

MICROSOFT We've
The High Performance Software™ written more
Macintosh programs than any other
software company. Including Mac's
spreadsheet, Multiplan®.

So if you want to get the most
out of your Macintosh, call (800)
426-9400. In Washington State and
Alaska, call (206) 882-8088. In
Canada, (416) 673-7638.

Television Storyboards (continued)

create animated storyboards, and everyone can see the movements they have to make," says Fraser. His future plan is to use an animation program with

zooms and lots of different screens to make presentations to the networks. "I'll let the Macintosh make the pitch for us. I can't really say, 'We are the brilliant writers who brought you so-and-so,' but the Macintosh can."—*John Vornholt*

Smurfs

Chris Miles is the director of the Leisure Recreation Planning and Design Division of Helman Hurley Charvat Peacock Architects in Orlando, Florida. Miles and his division have been involved with the design and construction of several major recreation centers, including the American Adventure Pavilion at the Walt Disney World EPCOT Center and the Shamu Stadium at Sea World in Orlando, Florida. The team's latest undertaking is a \$200 million theme park much like Walt Disney World in France's Lorraine Valley, and the Macintosh has become an integral part of the project.

The prodigious design documents, drawings, and correspondence for the project, in

both English and French, are created on the Macintosh and communicated via modem from Orlando to a French management group's office Macintoshes in the Lorraine Valley. Decorating the thousands of pages of technical documents are MacPaint-generated Smurfs, the peace-loving dwarfs who have become Europe's most popular cartoon characters. The Smurfs are the main characters in the theme park, dressed in space suits to illustrate the park's name, *Le nouveau monde des schtroumpfs*—The New World of the Smurfs. Scheduled to open by 1989, the theme park will combine high technology with rides, shows, and theme environments.—*K. T. Haase*

Chris Miles with his model for a Smurf (or schtroumpf as they say in France) theme park in the Lorraine Valley.

Software Entrepreneur's Forum

So you've finally created a great piece of software. You've spent every night and most weekends slaving away on your Macintosh to produce the little gem, and now dreams of making a living as a free-lance software developer are floating through your mind. Your mom says it's terrific, and all your friends are impressed, so what's next? How to bring that jewel to the marketplace?

Unless you've got venture capital and an experienced sales and marketing team, you're probably going to need help. And that's where a group like the Software Entrepreneur's Forum (SEF), of Palo Alto, California, can help. This three-year-old organization is dedicated to providing the independent software developer with "an educational forum for developing marketing strategies, exchanging information, and building professional relationships." What that translates to is a monthly general dinner meeting with various industry figures and special-interest groups focusing on specific topics.

And it's as good a chance to pick the brains of other free-lance developers and entrepreneurs as you'll find. Does direct mail work? Which are the best publications for placing ads? What about legal disclaimers and protection? Is public relations worth the money? How do you convince retailers or distributors to carry your product? Who is the most reliable disk copier?

At the moment the SEF is located only in Silicon Valley, and while the newsletter can be sent anywhere in the world, it's the face-to-face meetings that are of most value. Similar

groups have sprung up around the country: in Seattle there's the MicroComputer Marketing Forum, while some of the larger user groups, such as the Boston Computer Society, have software developers' and business groups. The state of Minnesota has recently inaugurated a Software Education Office for Developers. Perhaps developers' groups will become a trend. The SEF is considering starting chapters in different parts of the country. If there's enough interest in your area, get in touch with them—they'll help. Software Entrepreneur, P.O. Box 61031, Palo Alto, CA 94360.—*Jeffrey S. Young*

Computer Recreations

One of the great features of the magazine *Scientific American* is A. K. Dewdney's monthly "Computer Recreations" column. I've always enjoyed his imaginative and often unusual explorations. Curious but computerless readers find much to savor, but only computer owners can experiment with the concepts and programs into which Dewdney delves. Fortunately for Macintosh owners, the subjects of many of Dewdney's columns have been turned into programs for the Mac and placed in the public domain—on CompuServe and

Introducing inTouch

Communications Task Master from Palantir® Software

Save What You Want When You Want

With inTouch, any time during a session, you can decide to save something. Even if it's not on the screen, you can go back and get it from the scroll buffer.

Complete Protocol Support

MacBinary, XModem, and Crosstalk protocols for Mac-to-Mac, Mac-to-Host, Mac-to-IBM PC, or Mac-to-Whatever.

Electronic Mail - Today's Post Office

Send and receive mail from MCI, EasyLink, Dialcom, and the Company mainframe. Create messages with the built-in memos editor.

VIDTEX Emulation

Now you can see Compuserve's weather maps, stock price charts, or the FBI's Ten Most Wanted.

Communications Command Language(CCL)

Automated or unattended operations day or night. Set up a series of commands, and have them all done, one after the other -- all unattended. No problem.

Onscreen Function Keys

Onscreen programmable function keys allow you to customize your communication needs. Clicking on a key sends text, executes a CCL program, or displays another row of function keys.

Heralded Documentation

Learn by example from over 40 CCL files. Examples are provided to automate communications with EasyLink, MCI Mail, Dow Jones, Dialcom, Compuserve, and The Source. Creating your own CCL files is easy with inTouch.

FINANCIAL SERIES

General Ledger

Complete Double-Entry Accounting. A Chart of Accounts is provided, or create your own. Customize reports. Full financial statements provided.

Accounts Receivable

Allows Balance Forward, Open item, or a combination of the two. Generates statements and period aging. Flexible sales analysis reports.

Inventory Control

Control your stock with movement reports, re-order lists, purchase order tracking, and complete inventory item status reports. Full pricing lists too.

EDUCATIONAL SERIES

MacType®

Dvorak or QWERTY keyboards. Structured exercises to increase typing speed. Options include metronome, speed & accuracy box, student tracking, and much more.

MathFlash™

Four-function math flash card system. Timed drills on any combination of adding, subtracting, multiplication, or division. Progress awards, and student tracking.

WordPlay

Crossword puzzles, from easy to advanced, including diagramless. Play the puzzles included on disk or create your own and print them out.

PALANTIR®

SOFTWARE

Computer Recreations (continued)

elsewhere—by generous “Computer Recreations” readers.

One of my favorite Dewdney recreations is *Core War*, which was described in the May 1984 and March 1985 columns. *Core War* is a war game simulation in which specially designed programs try to destroy one another. *Core War* for the Mac, written by Robert Martin, takes place in the Core window, an area of memory represented on the screen by an 8000-cell battlefield. The battle programs try to alter cells (memory locations) that are important to an opposing program. The last program to remain intact is the winner.

You use a special programming language called Redcode to create *Core War* battle pro-

grams. Another program, called MARS (Memory Array Redcode Simulator), runs the war by alternately executing one instruction from each battle program. The battle's progress is illustrated in the Core window.

Armchair core warriors can enter the fray with ready-made battle programs, which have names like Dwarf, Vampire, and Gemini-Cannon. More adventurous warriors program their own champions.

Water, a water-covered, doughnut-shaped planet inhabited by fish and sharks, was the subject of the December 1984 “Computer Recreations.” In the program *Water*, also created for the Mac by Robert Martin, hu-

mans determine the initial numbers of the two major Water species and several other ecological parameters. Once the parameters are set, the program can begin. The course of life and death is revealed in

three windows. A map of the fish and the sharks on Water is shown in one window, and the current population of each species and the time elapsed since the start in another. The third window displays a graph of population sizes over time. Different initial parameters yield conditions of varying stability that are fascinating to watch and difficult to predict. As an ecological simulation, *Water* ably demonstrates an old ecological adage: simple ecosystems are usually unstable.

“Computer Recreations” will surely continue to inspire unusual and thought-provoking public-domain programs like *Water* and *Core War*. Watch for them.—Robert C. Eckhardt

Children's Software from Springboard.™

The best way to introduce your child to the computer.

Early Games for Young Children.™

This popular program offers a delightful collection of games designed to teach children ages 2½ to 6 a variety of important basic skills in a fun and friendly way.

Children learn to distinguish shapes, recognize letters, say the alphabet, count, add, subtract, even spell their names!

Large, colorful letters, gentle hints and a picture menu help children learn without adult supervision.

It's the perfect way to introduce your child to the computer.

Early Games

Satisfaction Guaranteed
At Springboard, we stand behind our products.

That's why we offer a full 30-day money-back guarantee. Look for these and other Springboard products for all ages at your favorite software store.

Now Available For:
Macintosh
Apple II+, IIe, IIc, IBM PC, PCjr,
Commodore 64/128

Easy as ABC.™

Learning the alphabet is a wonderful new adventure with Easy as ABC. Five fun games introduce children ages 3 to 6 to letter recognition, alphabetical sequence and upper/lower case letters.

Delightful animals present the alphabet in a variety of ways. Jumping frogs, buzzing bees and soaring rockets fascinate your children as they learn. And multiple skill levels keep them interested so they learn more.

No other program teaches your children the alphabet as thoroughly.

Questions on XY plotting in Excel, word processing in columns, understanding file descriptors, and more

Lon Poole

Delete files with caution, or you may cause the application program to fail spectacularly.

If you want to create XY scatter graphs in Excel, read about a technique that makes it possible. Also this month, information on pin-feed disk labels for neat printouts and desk accessories that let you delete files. A beep at startup and a flashing apple on the menu bar only mean that the Mac's alarm clock has gone off. There's no need to throw a pillow at it; just turn off the alarm. Some news about a word processing program that handles text in columns and an explanation of those cryptic descriptors, called file flags, that are assigned to every document.

Excel Dates and XY Plots

Q. Can an Excel macro enter the current date and time? How can I make XY plots in Excel? The charts provide only one variable axis.

David W. Stokes
Gainesville, Florida

A. The NOW() function reports the current date and time, according to the Mac's clock, as a serial number. The following functions convert the serial number to one of its constituent parts:

DAY(serial-number)
HOUR(serial-number)
MINUTE(serial-number)
MONTH(serial-number)
WEEKDAY(serial-number)
YEAR(serial-number)

These functions, like all Excel functions, work in macro sheets as well as worksheets. For example, the macro formula =FORMULA("=DAY(NOW())") enters a formula into the currently selected cell to compute the current day of the month.

Regarding your second question, there are tricks to making an XY plot with Excel: enter the X values as labels (not val-

ues) on what Excel calls the category axis, enter the Y values on what Excel calls the value axis, and choose a scatter chart.

Begin by arranging your X and Y values into a table in a worksheet. The first column of values in the table enumerates the X values, and the second column contains the Y values. (You could arrange the values in rows instead of columns, in which case the X values go into the first row.) In Excel parlance, the X values are the categories, and the Y values make up a data series.

After setting up the table, select both columns (or rows) of the values, and choose Copy from the Edit menu. Next, open a new chart window and paste in the data from the worksheet, but do not use the Paste command, which treats the X values as a data series instead of categories.

Choose Paste Special on the Edit menu. In the dialog box that appears, select the option Categories in First Row. Click OK, and Excel plots the chart using its standard chart type, which is a column chart. In a column chart, each tick mark on the category axis corresponds to an X value from the worksheet.

Change the chart to a scatter chart by choosing Scatter on the Gallery menu. Select a chart style in the dialog box that appears. As Excel draws the scatter chart, it adjusts the X (category) axis so the tick marks measure equal increments in the X value, from the lowest to the highest value

MAKE DIGITAL MOVIES with your Mac and MacMOVIES™!

If you need to make animated presentations with your Macintosh for business, education, entertainment, or just for fun, take a look at MacMOVIES™ from Beck-Tech!

FULL SCREEN ANIMATION at speeds up to 30 SCREENS PER SECOND!

MacMOVIES™ is a powerful set of animation tools - an "image processor" that goes beyond just slide show type programs. It allows you to compact many frames of animation down to a minimum amount of memory - and play the frames back smoothly, seamlessly, at speeds from single frame to 30 per second.

We listened to animators and artists who wanted a simple approach to computerizing the classic cel animation process, also known as "page flipping". We made MacMOVIES™ very easy to use, yet with powerful capabilities for professional animators.

MacMOVIES™ is incredibly FAST! The full screen image can be updated with no flicker at speeds up to 30 frames per second. (512K Macintosh required, 1024K or more recommended.)

**Advanced animation programs from Beck-Tech
- your Macintosh Enhancement Product Company**

Circle 486 on reader service card

CAPABILITIES

Full screen updates at up to 30 frames per second
Compiles large movie files into small memory
Uses MacPaint™ format for maximum compatibility
PXR Movie Interpreter program for development & editing
FMCOMP Movie Compiler program for 4:1 data compression
PROJECTOR program for single movie playback
MacMOVIES™ program for multiple movie sequences and longer playback
Speed and single frame interactive
More MacMOVIES™ tools to come in 1986
Runs under HFS as well as older systems
Mac and MacPlus Compatible

\$99 - IMMEDIATE DELIVERY

Call toll-free to order (VISA and Mastercard accepted) or ask your local dealer.

(continued from page 71)

on the worksheet's row of X values, and plots the data points accordingly (see "Excel XY Plot"). Label the axes and the data points by choosing Attach Text on the Chart menu.

Delete from Desk Accessory

Q. Is there a desk accessory that allows me to delete a file?

Robert Umlas
Palisades, New York

A. I know of two desk accessories that delete files. The *Extras* desk accessory displays a scrollable list of file names in a standard file selection dialog box. The *Disk-Info* desk accessory displays a scrollable list of file names in alphabetical or chronological order.

In either desk accessory, you select one file at a time for deletion. Both desk accessories ask you to verify your selection in a separate dialog box, and they ask for verification again if the file is locked. You can

Excel XY Plot

Scatter plots are suitable for data based on two independent variables, such as life expectancy and GNP. This chart was created in Excel and enhanced in MacPaint.

turn off all verification in *Extras* if, as program author Bob Luce puts it, "you never make mistakes."

Both desk accessories work with the original Macintosh File System used on single-sided disks. The versions available in early January (*Extras* 1.5 and *DiskInfo* 1.2) did not work with the new Hierarchical File System (HFS) used on Apple's hard disk and double-sided disks. Upgrades that will work with HFS are promised.

Delete files with caution, or you may cause the application program hosting the desk accessory to fail spectacularly. Don't delete any open files or any temporary files with names like Paint1, MW0001, Print File,

and Undo File. Be especially careful when using the *Switcher* that you don't delete a file from one partition that's in use in another.

Both *Extras* and *DiskInfo* are distributed as shareware, so you can get copies from most user groups. You can order *Extras* for \$10 directly from Bob Luce, 324 E. Shaw, Fresno, CA 93710. *DiskInfo* is available for \$10 from Maitreya Design, P.O. Box 1480, Goleta, CA 93116, 805/968-7578.

TRY NEW EZ-DRAFT™ SOFTWARE AND DRAW YOUR OWN CONCLUSION.

PC-based mainframe power in a CAD system. ONLY \$2495.*

EZ-DRAFT is a full-featured, professional CAD/Drafting system for the Apple Macintosh™. It's ideal for every kind of drawing. Now both casual users and experts can...

- Select from a wide variety of forms, like boxes, hexheads, slots and B-splines.
- Make projections from a designated workview to any other orthogonal or isometric view.
- Download drawings from most mainframe CAD systems using IGES, including geometry, text, dimensions and views.
- Dynamically reposition dimension sets.
- Create high-quality technical documentation by using

EZ-DRAFT drawings with Macintosh desktop publishing software.

- Use in EZ-DRAFT text and pictures that have been created with MacWrite™ and MacDraw™.
 - Use plotters like HP and Calcomp and plot high-quality drawings on the Apple LaserWriter™.
- EZ-DRAFT's the surefire way to increase efficiency and boost profits! Call today for complete details.

Applications support readily available.

COPY II MAC™

BACKS UP PROTECTED SOFTWARE.

Copy II Mac does more than just sector copy. Its bit copy program has the built-in power and flexibility to handle most protection schemes automatically and supports single and double-sided drives. (We update Copy II Mac as often as needed to handle new protections; you as a registered owner may update at any time for \$15 plus \$3 s/h.)

RUNS PROTECTED SOFTWARE FROM YOUR HARD DISK.

Copy II Mac makes using your hard disk (including the Apple hard disk-20) as convenient as it should be. No longer will you have to use the 3 1/2" disk with some of the most popular business software. Call for current list.

GIVE YOUR MAC MORE MUSCLE.

Copy II Mac can even repair some damaged disks and recover accidentally deleted files.

System Requirements: Macintosh or Macintosh Plus, 1 drive. (2 drives, all available memory and hard disks fully supported.)

Call 503/244-5782, M-F, 8-5:30 (West Coast time) with your   in hand. Or send a check for \$39.95 U.S. plus \$3 s/h, \$8 overseas.

NEW

Williams & Macias myDiskLabeler™

myDiskLabeler™, the finest disk labeling product available, lets you design and print unique, high quality, removable labels for your 3 1/2" disks.

New, Version 2 With Icon Grabber

The advanced, Version 2 myDiskLabeler™ lets you grab application icons and modify them. Create your own distinctive icons with the Icon Editor or with Macpaint.™ Seven windows provide editing of text and graphics: Disk Name, Edge Title, Back Title, Contents, Picture, Owner, and Date. myDiskLabeler™ also reads and sorts disk directories. Saves labels for easy updates. myDiskLabeler™ supports HFS, Apple's new Hierarchical Filing System.

Color Printing

Design and print color labels with our color option and Imagewriter II.™ Option is just \$10.00 more.

Precision Printing

Print single or multiple labels. Graphics interface makes alignment of Smart Labels™ quick and easy.

Smart Labels™

myDiskLabeler™ comes with 54 die-cut Smart Labels™ designed specifically for the Imagewriter.™ Labels wrap around the disk edge, have a matte finish, and are removable. Refills are \$5.00 for 54 labels, \$9.50 for 108, or \$18.00 for 216.

Call today, or ask your Apple dealer. Shipping to 48 states is \$3.00 (\$1.00 for each add'l. item). myDiskLabeler™ is for Macintosh™ (MacPlus, 128, 512, or XL) and Imagewriters.™

Version 2, Only \$44.95*

With Color, Only \$54.95*

Printing Disk Labels

Q. When I print a disk label, the blank label slips around in the Imagewriter. Taping the blank label to a piece of paper works but is cumbersome, slow, and unreliable. Do you know a better way?

*Jeffrey Hallett
Locke, New York*

A. Pin-feed labels should solve your problem. You can obtain them from New Canaan Microcode (136 Beech Rd., New Canaan, CT 06840, 203/966-6969) or from Ideaform Inc. (908 E. Briggs, Fairfield, IA 52556, 515/472-7256).

Alarm

Q. My Macintosh has developed an annoying quirk. When starting up with any disk, it beeps as the menu bar appears, before the disk icon appears. And the apple in the menu flashes continuously, which is distracting. Any idea what's happening?

*Michael Maiman
San Francisco, California*

A. Your Mac's alarm clock has gone off. To turn off the alarm, open the Alarm Clock desk accessory. It reports the time of day, the date, if the alarm is set, and when the alarm will go off. This desk accessory also enables you to set and adjust those items. The clock is accurate to within a second or so each day. It keeps running when the Mac is switched off, thanks to a self-contained, long-life battery.

When you choose Alarm Clock from the Apple menu, you see a digital clock that reports the time of day. Clicking the small lever on the right drops the other two parts of the Alarm Clock into view. Selecting the icons at the bottom of the display lets you view or change the time of day, the date, or the alarm setting.

Check the alarm by clicking the alarm clock icon. The time at which the alarm is set to ring appears in the middle section above the icon, with an on/off button to its left. Click the button down to turn the

**A structured programming language
you'll really feel comfortable with.**

You know John Kemeny and Tom Kurtz. They developed the original BASIC. Now they're back with an even better version: a flexible, easy-to-use structured programming language they call True BASIC.™

True BASIC offers a full selection of control structures. External procedures can be compiled into libraries, making True BASIC faster and more powerful than any other programming language.

True BASIC has a complete matrix algebra package and the best graphics ever in a higher level language. And there are optional libraries for things like sorting and searching and 3-D graphics.

True BASIC programs run on any computer which runs True BASIC, good news for users with more than one kind of PC.

You'll love True BASIC. Whether you're programming for your own applications, teaching others, or developing products to go to market, send in the coupon below to receive a free demo disk.

Available for the IBM-PC™ and compatibles, Apple Macintosh™ and Commodore Amiga™.

ImageWriter Ribbon Cartridge (box of 2 uninked ribbons)	\$10.00
ImageWriter Ribbon Cartridge (box of 2 inked ribbons)	\$12.00
Print Head Cleaning Kit	\$ 9.95
Re-Inker Shut-Off Timer (for high volume users)	\$24.00
ImageWriter Silence Pad	\$11.25

MOUSE PAD

Your mouse will work faster and live longer. Anti-static, designer blue surface, 9-3/8" x 7-1/8" with thick foam pad.

BEDE TECH DIRECT \$7.95 Reg. \$9.95 Value

COOLER COMPUTERS LIVE LONGER

Built without its own fan, your MAC is prone to overheating. High temperatures can cause component failure or even burn out your power supply circuit board. Tests show our fan significantly reduces the temperature inside your MAC. It installs into the recessed Macintosh handle in one second. It runs whisper quiet. Intelligently designed by **Steve Beck's Beck-Tech**, with built-in surge protector and top-mounted switch that controls both fan and MAC. **PATENT PENDING**

BEDE TECH DIRECT \$79.00 Reg. \$129.95 Value

Temperature measured inside top left and right side of MAC with LM35 temperature sensor. 75° average ambient air temperature during test.

5-PIECE PREMIUM CUSTOM COVER SET

These heavy-duty, earth toned, decorator vinyl covers will be custom fitted to your individual MAC and MAC PLUS components. A must for dusty conditions, offices and homes with forced air heating. Call With Your Mac Hardware Model Numbers.

5-PIECE PREMIUM COVER SET. **BEDE TECH DIRECT \$49.00** Reg. \$79 Value

KEYBOARD COVERS

Sturdy, Mac-colored, hard covers protect your MAC or MAC PLUS keyboard and number pad from dust, dirt, spills and damage. Specify MAC or MAC PLUS.

Bede Tech Bonus • MAC Keyboard Command Reference Charts! **BEDE TECH DIRECT \$12.50** Reg. \$17.50 Value

DISC ORGANIZER • SAVE BIG WITH FOUR-PAK

Each extra sturdy 200 lb. test corr. bd. disk organizer holds up to 100 3.5" or 5.25" disks. Comes with removable dividers, cover. Glossy white dirt-resistant surface. Stackable!

BEDE TECH DIRECT Save! Four-Pak \$27.95 • Reg. \$39.80 Value

alarm off. When the on/off button is up, the alarm is set, and short lines radiate from the top of the alarm clock icon to suggest that the bell is ringing (see "Alarm Clock").

To change the alarm setting, click any element in the digital display next to the on/off button—hours, minutes, seconds, or AM/PM. An adjustment button with arrows pointing up and down appears that lets you adjust the selected element. Click to change the number one unit at a time; press to spin ahead rapidly. Alternatively, you may set the time by typing. You cannot change AM or PM by typing, however, so you must type the time in 24-hour format (for example, 19:15:00 for 7:15 PM). Press the Tab key to move from hours to minutes and from minutes to seconds.

Edit by Columns

Q. In *MacWrite* how can I enter and edit text in columns without having the changes in one column affect other columns? I am writing a reference book on functional analysis, and I am arranging my

entries alphabetically. Since *MacWrite* treats the contents of a page as continuous text, editing by columns is impossible.

James S. Hellen
Wayne, New Jersey

A. The only Macintosh word processor I know of that permits typing, editing, and printing in columns is *Haba Word*, which was scheduled for release in March. It shows columns on screen as they will be printed and lets you resize, move, insert, and delete columns. *MacWrite* 4.5 can't work in columns, and *Microsoft Word* 1.05 only prints in columns.

Haba Word uses two column schemes. One scheme flows text to the next column on the right when you reach the end of a page, like the columns in a magazine. The other scheme maintains columns across pages like a spreadsheet.

Speaking of which, have you considered typing and editing text in the columns of a spreadsheet? Just ignore the formula calculation capabilities and use the column manipulation features. Most spreadsheet

(continues on page 87)

Alarm Clock

This desk accessory shows the current time and date and when the alarm is set to go off. Silence the alarm by clicking the on/off button located to the left of the middle display.

MacServe.

For those who understand the power of sharing.

It's called teamwork. All the members of a team benefit from sharing knowledge and resources.

Now your workgroup can take advantage of an easy to use and reliable way to share your choice of hard disks and printers. Not only will your teamwork improve exponentially, but you'll save lots of money while you make each member of your group a Power User. Then watch what MacServe does for the prosperity and morale of your operation!

Increase productivity

Everyone in your group will benefit from direct access to common databases (such as Omnis 3) and

libraries of documents. And, MacServe's printer spooling is a great relief, because you can share a printer and still get back to work sooner.

Reliable and Convenient

MacServe lets you divide hard disks into segments or "volumes" with speed and security advantages even for single Macintosh configurations. It's faster than accessing a whole disk and much more reliable than any file serving scheme yet devised. And disk sharing is incomparably more convenient than using and swapping floppies with your colleagues!

The complete Apple network

MacServe networking software and Apple's Hard Disk 20 finally make Apple networking a reality. But MacServe does not limit you to Apple's hard disks and printers — your group can also share any of the leading hard disks — and all at the same time. Add more Macs, disks, and printers as you need them. MacServe requires no special or dedicated hardware.

Call your Apple dealer now

By April 15, leading Apple dealers will be delivering a networking system that really works. MacServe has arrived.

IN STATISTICS, LESS IS MORE

SYSTAT™, the first company to port a mainframe statistics package to microcomputers, has now been joined by BMDP™, SAS™, and SPSS™. Now you have a choice. You can buy a lot of package to do a little statistics or a little package to do a lot of statistics. In statistics, as in art, less is more.

What's less?

Less to learn. SYSTAT has less than half the commands.

Less to wait. SYSTAT is faster on big and small problems

Less to spend. SYSTAT's single user and site license prices are lower.

Less memory. SYSTAT uses less RAM. And *much* less disk space. It even works on floppy disk systems.

What's more?

More statistics. SYSTAT Version 3.0 has more statistical capabilities than *any* microcomputer statistical package. It even has more than mainframe BMDP, SAS/STAT, or SPSS.

More machines. SYSTAT operates on IBM™ PC's and compatibles, generic MS-DOS™ machines like the HP-150™, Wang™ and DEC Rainbow™, on CP/M™ machines, on several UNIX™ minicomputers and mainframes, on the VAX 11/780™, and even on the Apple Macintosh™.

More accuracy. SYSTAT's regression routines have been proven more accurate than SAS PROC GLM, SAS PROC REG, BMDP1R, BMDP2R, and SPSS REGRESSION on micros *or* mainframes.

More variables. On a 512K microcomputer, SYSTAT can compute regressions and other statistical analyses on more variables than any other microcomputer statistical package.

To evaluate a statistical software package seriously, you should look beyond brand name or marketing hype to find a program that will give you the accurate results you need. Ask for the booklet "STATISTICS QUIZ" which contains simple problems you can run to reveal bugs and serious deficiencies in mainframe and microcomputer statistical packages. We want to help you get a package that gets the correct answer.

SYSTAT capabilities include:

- Full screen spreadsheet data editor
- Missing data, arrays, character variables
- Unlimited cases
- Process hierarchical files and variable length records
- Rectangular and triangular files
- Relational database management and report generation
- Character, numeric, and nested sorts
- Merge and append large files
- Unlimited numeric and character transformations
- Optional programming language
- Interactive or batch
- Read and write text and external files
- Subgroup processing in statistical modules with SELECT and BY
- Value labels
- RECODE statements for quick multiple codes
- Scatterplots, contours, histograms, stem-and-leaf, boxplots, bar charts, quantile, probability plots
- Basic statistics, frequencies
- T-tests
- Multi-way crosstabs with log-linear modeling, association coefficients, PRE statistics, asymptotic standard errors
- Pairwise/listwise missing value correlation, SSCP, covariance, Spearman, Gamma, Kendall Tau, Euclidean distances
- Linear, polynomial, multiple, step-wise, weighted regression
- Extended regression diagnostics
- Multivariate general linear model
- Multi-way ANOVA, ANOCOVA, MANOVA, repeated measures
- Post-hoc tests
- Principal components with rotations and scores
- Multidimensional scaling
- Multiple and canonical discriminant analysis. Bayesian classification
- Cluster analysis (hierarchical, single, average, complete median, centroid linkage, k-means, cases, variables)

If you compute after dark...

...switch to the magic of GENie™ and stay on-line longer, for less!

Introducing GENie, the General Electric Network for Information Exchange. It's part of General Electric Information Services—the largest commercial teleprocessing network.

Now the power of GENie stands ready to bring a little magic into the life of PC owners just like you. And for potentially much less than other on-line information services.

With GENie, you pay no hidden charges or monthly minimum fees. You pay only for the actual time you're on-line and the \$18.00 registration fee. Nothing more.

Compare & Save

	Services						Pricing			
	SIGs/User Groups	Electronic Mail	CB Simulator	Computing News	Games	2400 baud access	Registration fee	Monthly minimum	Non-prime time rates	
									300 baud	1200 baud
GENie*	X	X	X	X	X	X	\$18.00	none	\$5.00	\$5.00
CompuServe	X	X	X	X	X	X	\$39.95	none	\$6.25	\$12.75
The Source	X	X	no	X	X	X	\$49.95	\$10.00	\$8.40	\$10.80

*Rates and Services shown in effect 12/85. Non-prime time rate applies Mon–Fri, 6pm–8am local time, all day Sat., Sun., and nat'l. holidays. Subject to service availability. Additional surcharge applies for 2400 baud service.

Save up to 60%

Check out the chart above and compare it for yourself. You'll find GENie can deliver all of your favorite services for an incomparable price at incomparable savings!

Put the power of GENie at your command

- Discuss the latest in computer products and accessories or download public domain software with GENie's *RoundTable™ Special Interest Groups*.
- Meet new people, share ideas with friends—old and new—with *LiveWire™*, GENie's CB simulator that has everybody talking!
- Get your message across and back again with *GE Mail™*, GENie's electronic mail service.
- Organize a local, regional or national get-together in one of GENie's 40 "conference rooms" with GENie's *Business Band Real-Time Conferencing*.
- Go one-on-one with classic computer games, match your wits against others with multi-player games, or download for future play in GENie's *Game Room*.
- Stay in touch with what's new on the microcomputer scene, courtesy of GENie's news service, *News and Commentary*.

GENie can take you to new highs in speed and keep you there. Because our non-prime time rate for 300 OR 1200 baud is only \$5.00 an hour. And that means you save 20 to 60%. Or if you prefer, 2400 baud service is now available.

With services and prices like these—talk, read, learn, or play to your heart's content. Because now you can keep your eyes on the screen, not on the clock.

With your personal computer, modem, communications software, and telephone, you already have everything you need to make GENie come to life. You'll receive FREE OF CHARGE—3 hours of non-prime time use—a \$15.00 value.

So why not Sign-Up today with this special offer, let GENie bring a little magic into your life!

3 FREE Hours When You Sign Up From Your Keyboard Before May 31st—4 Easy Steps:

1. Have ready your VISA, MasterCard or checking account number to set up your personal GENie account.
2. Set your modem for half duplex (local echo)—300 or 1200 baud.
3. Dial 1-800-638-8369. When connected, enter HHH
4. At the U# = prompt, enter 5JM11986, GENIE then RETURN.

No Modem Yet? Need more information or assistance? We can help! Call 1-800-638-9636, ext. 21.

Get on-line with GENie. And stay longer, for less.

Gold Collar Worker

*Photographed by Brian Thompson at the law library of
Lang, Michener, Toronto, Ontario.*

Name: Bruce Lewis.

Profession: Managing partner, major Canadian law firm.

Hobby: Crafting reproduction William and Mary furniture.

Work style: Perfectionist. Demands 100% accuracy, superior quality and appearance in every legal document.

Computer of choice: Macintosh™ with a LaserWriter. Placed 65 Macintosh computers on the desks of both lawyers and staff. Networked them to share 9 LaserWriters. Plans to buy 100 more Apple computers this year.

Favorite software: Document Modeler™, a powerful expert system toolbox for documents. It enables Bruce to "clone" his 12 years of legal experience to assist other lawyers and staff. And it saves time.

First application: Bruce constructed a model of the dozen or so letters usually required for real estate transactions. The model prompts a secretary, step-by-step, to input every relevant particular of a transaction and then automatically performs any calculations, assembles the appropriate clauses and produces impeccable letters customized to the client's individual needs, precisely as Bruce specified. Result: a 35 minute job reduced to 10 minutes.

Next application: More document models, this time for more complex documents.

Bruce Lewis. One of a new breed of "gold collar workers"* who is boosting professional and managerial productivity with advanced knowledge-management tools.

Become a gold collar worker. Contact the Model Office Company™. Phone: 1 800 268-8181, our toll free number in Canada and continental U.S. Or write: The Model Office Company, The Gooderham Flatiron Building, 49 Wellington St. East, Toronto, Ontario, Canada, M5E 1C9.

programs even let you enter lines out of order; the program sorts them for you. When you have arranged the text to your satisfaction, copy it from the spreadsheet and paste it into *MacWrite*, where you can make font and style changes. When you paste spreadsheet information into a word processing document, the columns align on the tabs you have set.

File Flags

Q. I've used the *SetFile* desk accessory a number of times to retrieve a lost document by changing its type and creator. I've often wondered about the meaning of the document descriptors, such as Initied, Busy, and of course Bozo. Can you fill me in?

Tim Kraft
Canton, Ohio

A. Every disk sets aside space for a file directory, which keeps track of file descriptions and locations. The description of each file includes a standard set of file flags, including the Initied, Busy, and Bozo flags you mentioned (see "File Flags Table").

You set the flags on or off using the *SetFile* desk accessory or the *Fedit* program. Most user groups offer both *SetFile* and *Fedit* as shareware. You can order *Fedit* for \$30 from John Mitchell, 939 E. El Camino Real #122, Sunnyvale, CA 94087. *SetFile* is available for \$10 from Fred, Sam, and Dave Software, 1442A Walnut St. #153, Berkeley, CA 94709, 415/849-9114.

Imagewriter Prints Only U's

Q. Sometimes my Imagewriter prints only U's, a whole line of them, over and over. This unseemly behavior happens on and off with several programs. The Imagewriter passes its self-test and works fine with a friend's Mac. What gives?

Paula Wilkes
Charleston, South Carolina

A. The unique printing you describe occurs when you try to print a document on an Imagewriter after using a disk that was set up for the LaserWriter with AppleTalk connected. You need not have actually

Flag	Meaning
<i>Protected</i>	The Finder cannot duplicate this file or move it to the trash or to another folder or disk.
<i>Locked</i>	The Finder cannot remove, rename, or replace this file.
<i>Invisible</i>	The Finder does not display this file's icon.
<i>Bundle</i>	This file contains an icon list, file references, and version data resources, which the Finder copies into its desktop file to display the proper icon for the file and its related documents.
<i>System</i>	This is a System file.
<i>Bozo</i>	This file is protected by a copy-protection scheme so outdated that Finder 5.0 ignores it.
<i>Busy</i>	The file is open.
<i>Changed</i>	The file has been changed since it was last saved and ought to be saved again before closing it or quitting.
<i>Initied</i>	This file's icon has been assigned a location on the Finder's desktop.

printed anything on a LaserWriter, but the following conditions must have occurred in the order stated.

- When you last used the Choose Printer desk accessory on the LaserWriter disk, you selected the AppleTalk Connected option.
- You started up with a LaserWriter disk when you last turned on the Mac, or you made a LaserWriter disk the startup disk since then.
- You shut down the Mac with the MiniFinder's Shut Down button or the Finder's Shut Down command, or you pressed the Reset button on the side of the Mac, and then started up with an Imagewriter disk.
- You tried to print on an Imagewriter attached to the printer port.

Once the AppleTalk Connected option has been set, it cannot be removed by changing application programs, switching disks, shutting down, or pressing the Reset button. You must use the Choose Printer desk accessory or turn the Mac off. However, Choose Printer lets you change the AppleTalk setting only on a LaserWriter disk.

It's surprising that turning off the Mac disconnects AppleTalk. It's the only documented difference I know of between pressing the Reset button and switching the power off. Further, the AppleTalk Connected/Disconnected setting is recorded in

File Flags Table

A key to the descriptors that flag every file on disk. You can read file flags using the *SetFile* desk accessory or a program like *Fedit*.

a special area of memory called parameter RAM that is kept alive by the clock battery. Theoretically, you should have to turn off the Mac and remove the battery for a minute or so to disable the setting. Remove the battery in case the printing problem persists after turning off the Mac. If you remove the battery, you must reset the clock, the calendar, and the features controlled through the Control Panel desk accessory.

Get Info answers questions about the Macintosh and how it works. When you need advice about using the Mac, drop me a line. I cannot respond to all letters, but I will answer the most representative questions. Send your question about the Macintosh, Macintosh software, and Macintosh programming to Get Info, Macworld, 555 De Haro St., San Francisco, CA 94107. Send electronic mail to CompuServe 70370,702 or The Source BCW440. All published submissions become the property of Macworld.

Order out of Chaos

Danny Goodman

With the release of 800K double-sided disk drives, the Hard Disk 20, and Finder 5.1, Apple's new Hierarchical File System lets you organize files in true file folder style. Once you know some of the system's intricacies, you'll have your disk storage firmly under control.

When you are confined to 400K, single-sided drives on the 128K and 512K Macintoshes, you rarely have difficulty organizing application and document files on a disk. On the desktop, you can group files into folders to eliminate visual clutter and help you find your way through several dozen icons. Within an application, the Standard File dialog box (the one you see when you choose Open from the File menu) lists all applicable documents on the disk in convenient alphabetical order, regardless of folder organization. Unfortunately, the more files you store on a disk, the slower the Finder works to track information.

Hard disks by themselves aren't the solution. Early models presented problems because a 10- or 20-mega-byte disk could easily store more files than the Finder could track effectively, causing enormous delays in recreating the desktop when you quit an application or in opening a document from the Standard File dialog box. Moreover, an Open File dialog box could conceivably list hundreds of documents.

To counteract the Finder's sluggish performance and organizational nightmare, as well as severe file quantity limitations in Finder version 1.1g, hard disk

developers divided the hard disk into several *volumes*. The Finder was tricked into seeing each volume as if it were a separate disk, and you could hide ("unmount") unneeded volumes from the Finder with the help of a small utility program that worked only from the desktop. The more inactive files you could mask from the Finder, the faster the Finder worked. Although this was a practical stopgap measure, most people hoped that Apple would soon furnish a new Finder that would speedily handle as many files and folders as someone would likely create on a hard disk, and offer quick access to any file from the Standard File dialog box.

Figure 1

In a hierarchical filing system, documents and folders "nest" inside one another. Folders in Finders 4.1 and earlier were strictly desktop conveniences; in Finder 5.1, documents retain their folder identities, even from inside an application.

Apple's long-awaited solution is called the Hierarchical File System (HFS). It is built into the Mac Plus's read-only memory (ROM). The new ROM comes with the 800K disk drive upgrade for earlier Macs. The latest version of the Finder, release 5.1, recognizes both the HFS and the older, "flat" file structure (release 5.0 does also, but Apple encourages all 5.0 owners to buy the ROM and Finder 5.1 updates from their dealers to get the latest features and refinements). The HFS was designed to handle the large number of files and folders that will likely be generated on a hard disk, such as the Hard Disk 20 (HD 20), and Apple's new 800K double-sided floppy disk drives. With the new ROM, single-sided disks are treated as nonhierarchical system disks, even on 800K drives. Because the old System (2.0) and Finder (4.0) do not recognize the HFS file structure (the HFS files are invisible), make sure you use System 3.1 and Finder 5.1 on your startup disks. You update disks by moving the new System and Finder icons onto your old startup disks or by using the Installer program that comes on the Mac Plus System Tools disk.

Chain of Command

A hierarchy is any group of people or items arranged in a sorted series or in steps, as in a hierarchy of military rank. Generals give orders to their colonels, the colonels in turn pass the orders to their majors, and so on, down the ranks.

In the HFS desktop display and Standard File dialog box, the topmost rank is symbolized by a disk icon: a floppy disk for an 800K disk and a hard disk for the HD 20 or similar hardware. Ranks below the disk directory are represented as folders. Each successively lower rank of folders is "nested" in the rank above it, like slipping papers and manila folders inside progressively fatter folders in a file cabinet drawer (see Figure 1).

Thanks to early Finder versions, you probably already have a feel for file hierarchy at the desktop level if you've placed folders inside one another and then opened folder after folder to find a document icon. These folders, however, are merely cosmetic desktop aids. The Finder really sees the files as one long list, without any folder organization.

What's so important about the HFS, however, is that the Finder recognizes folder divisions and lets you open and close folders from the Standard File dialog box. In other words, whenever the Standard File dialog box is "looking" into a folder, only the names of documents and folders appearing in that folder's desktop window equivalent are listed. Even if a hard disk has 10,000 files stored on it, the Standard File dialog box lists only as many documents or folders as you would see looking at the currently opened folder. That makes finding a specific file on a crowded disk much easier and greatly reduces the amount of time-consuming work that the Finder and the disk drives must do.

Let's say you want to view a file from an extensive folder organization of your financial records (see Figure 2). The document you want to see is a *Microsoft Excel*-based travel expense report for the second week of April. When you open the main disk directory on the desktop, the Financial folder is visible (along with other disk directory folders not shown in Figure

2). To access the file labeled Week 2 from the desktop, you open a series of five folders—Financial, Taxes, Expenses, Travel, and April—to see the weekly document icons.

You can then double-click on the Week 2 icon to start the application (*Excel*) and automatically open the Week 2 document inside the application. By doing so, you also establish a path to the April folder that the Finder will follow to save changes to the Week 2 document. Also, while the application is open, if you choose Open or Save As from the File menu, you see the HFS version of the Standard File dialog box, which lists all documents in the April folder (see Figure 3).

A major advantage of HFS over other hard disk volume arrangements is that you can make your way to other folders while you view the Standard File dialog box. Simply place the mouse pointer on the current folder name (April in Figure 3) and hold down the mouse button (see Figure 4). You now see the path that the Finder takes from the HD 20 disk directory to reach the weekly documents in the April folder.

To open a document in a folder elsewhere in the hierarchy, you select the appropriate folder name from the list. To view a document in the vehicle expenses folder, for example, you would select the Expenses folder from the list. The Standard File dialog box then displays a list of the three folders nested in the Expenses folder (notice the small folder icons to the left of the folder names): Medical, Travel, and Vehicle (see Figure 5). Double-click the Vehicle folder name to see the documents in that folder.

You can also navigate through HFS using the ⌘, Tab, Enter, and cursor keys. ⌘ with the up arrow takes you to the next level up, and ⌘ with the down arrow takes you down one level, for example.

This type of folder organization is a convenient way to keep unnecessary files out of view when you're concentrating on a particular document or task. If you set up a good organization plan for your programs and documents, you should be able to find a document more quickly by tracing logically nested folder names than by deciphering names from a list of several hundred files. HFS also reduces the burden of devising unique names for similar files (such as all Week 1 files) on a large storage disk, because two documents with the same name can be stored on an HFS disk, provided the files are stored in different folders.

It's Your Default

In planning your work patterns with the HFS, you should be aware that the Finder remembers the pathway established when you start a program or open a document and that the pathway depends on the method you use to start the application. For example, if you double-click an application icon located in the disk directory, then the next time you select Open or

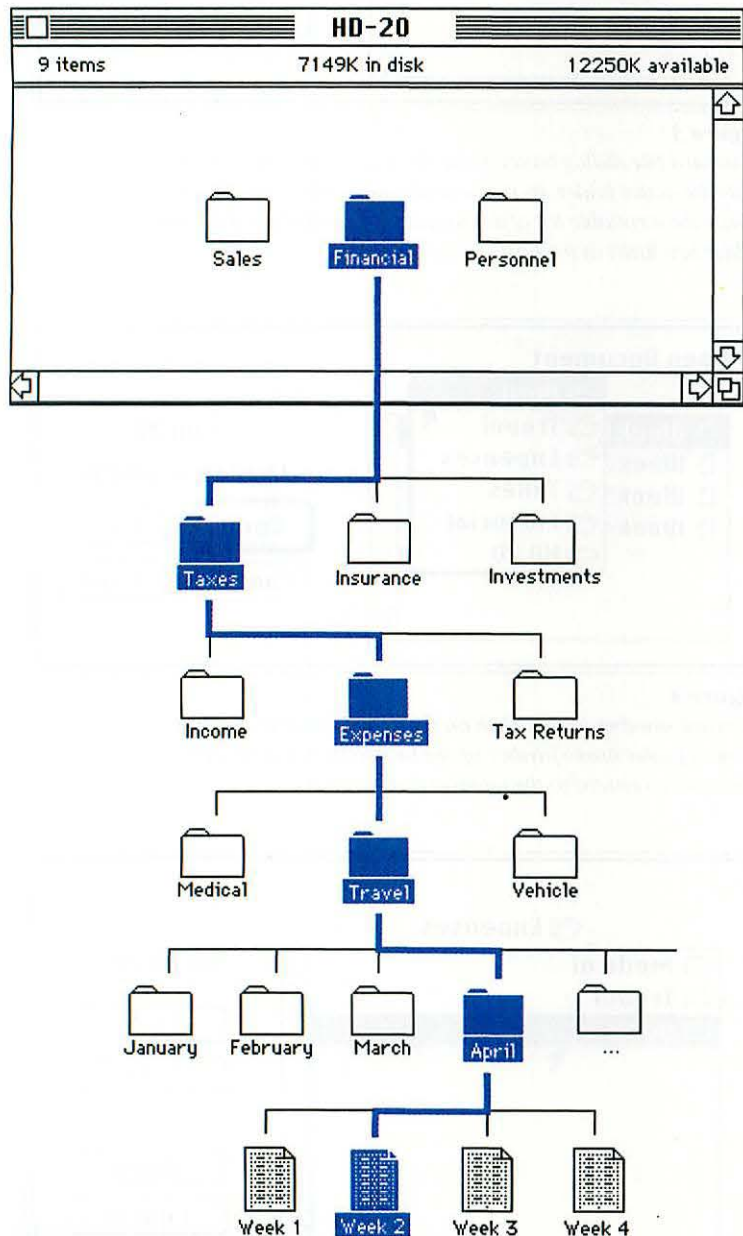

Figure 2

The Macintosh Hierarchical File System establishes nested levels of folders and documents. The Finder keeps track of the pathway through the hierarchy to your document.

■ Getting Started

Save As, the root directory is automatically selected and is therefore called the *default directory*. But if instead you start an application by double-clicking a document icon in a nested folder (as in the April travel expenses example), the document's folder becomes the default directory for the Standard File dialog box. Of course, you can change the default directory by selecting a different folder in the Standard File dialog box.

It is also important to understand how the HFS handles an application's requests for further instructions from auxiliary files, such as a help file. Very often during the operation of an application, the program reaches out to the disk for instructions, which may be stored in the program's file, a separate help file, or separate "support files," some of which may not be visible as icons on the desktop (they are the so-called hidden files). Regardless of the current default directory, when the program reaches out, it first looks to the folder (or disk directory) containing the application icon. If the desired file is not there, the program next looks into the folder containing the System and Finder icons—hence Apple's admonition that both the System and the Finder reside in the same folder. Depending on the application, you may run into problems if you are not careful in placing these auxiliary files (see "Potential Problems").

Loading Up with Applications

For most commercial programs, which have a single program file, you can place the application icon anywhere you please, even in a deeply nested folder. Moreover, most programs with single help files let you place the help file inside the folder containing the System and the Finder, so you don't have to clutter your applications' windows with help files (this works only if each help file, as delivered on the publisher's disk, has a unique name, such as Excel.Help).

You may encounter difficulties with programs that rely on hidden files, however. At first you may not even be able to run a program from the hard disk, even though you correctly copied the program's icon from the floppy disk. That's because the hidden files weren't copied. Fortunately, Finder 5.1 lets you copy the complete contents of a floppy disk onto the hard disk. To do so, drag the floppy disk icon to the hard disk icon. The Finder automatically creates a folder on the hard disk with the name of the floppy disk, and all files—visible and hidden—are transferred in one operation. If the contents of a System Folder are copied onto the new hard disk folder, be sure to trash the System, Finder, Imagewriter, Scrapbook, and Clipboard files, since these are already in your hard disk's system. As a shortcut, hold down the Option key while dragging each file into the Trash; this overrides the dialog box that asks if you're sure you want to erase a file.

You may be tempted to create multiple System Folders on the HD 20 to offer different collections of fonts and desk accessories for different applications. While many hard disks from the pre-HFS days allow

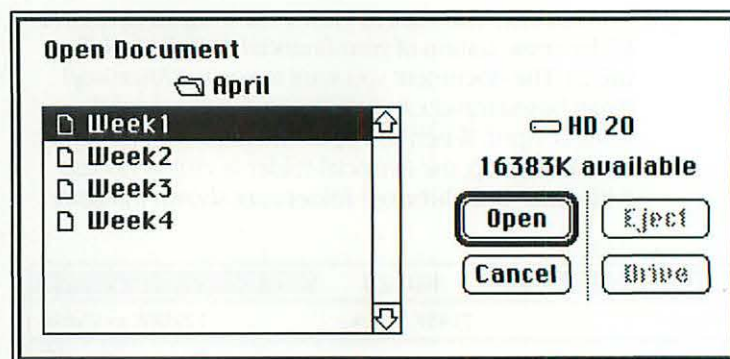

Figure 3

Standard File dialog boxes in the HFS display the contents of only the active folder; its name and small folder icon appear above the scrollable list of documents. Documents in the April folder are listed in the box.

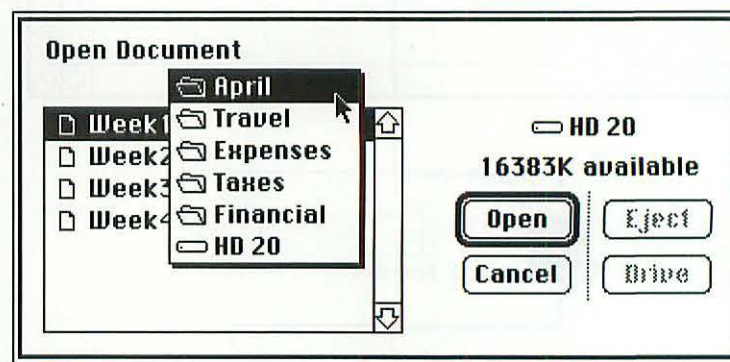

Figure 4

To reach another folder, click on the active folder name and select a folder name further up the hierarchy. Select the HD 20 directory to return to the topmost disk directory.

Figure 5

A folder can contain documents or, as shown here, other folders. Small icons tell you at a glance whether a name in the scrollable box refers to a folder or a document.

Potential Problems

Some versions of Mac software purchased prior to January 1986 may have difficulty running with the HFS. Until updated versions appear, be aware of potential incompatibilities and instabilities with the applications in the following list. In some cases (the Infocom games, for example) the problem is related to copy-protection schemes and requires that you use the program from a floppy disk only. Some applications such as *Dollars and Sense* and *Filevision* must be run from 400K floppy disks to read files created with HFS. In many other cases the application works provided that the application and its documents are stored in the same folder. The list is not exhaustive, but it

should give you an appreciation for the kinds of problems that you may encounter. Consult with the publisher on the status of updates.

ConcertWare +. Hangs up when you change volume with the Control Panel.

Click-On Worksheet. Bombs with Mac Plus ROM.

Excel. All linked documents must be in the same folder so that references get updated automatically.

Dollars and Sense. Use the floppy disk application only.

Hayden:Speller. Bombs.

MacDraw. The font list does not scroll; it is limited to 11 fonts.

Macintosh Pascal. Cannot copy to 800K drive or hard disk due to copy protection. New key-disk-protected version expected.

MockWrite and Sidekick's Note-pad +. Cannot save files.

MusicWorks 1.0. Use the floppy disk application only.

Red Ryder 6.2. Cannot send or receive files.

Sargon III. Use the floppy disk application only.

Smartcom II. Earlier versions cannot access folders.

Switcher 4.4. Add about 20K per application. All Switcher Set applications must be in the same folder. A new, intelligent version is expected soon.

ThinkTank 1.1. Version 1.1 cannot access folders and is occasionally unstable. Version 1.2 runs correctly.

TurboCharger. Bombs, but Mac Plus ROM contains built-in cache memory.

this (with careful naming and renaming of System files to change systems), the HD 20 and HFS aren't as accommodating. Keeping two System files in different folders can cause errors, so play it safe: keep only one System file on your HD 20.

Organizing Applications

With HFS and a hard disk offering so many possibilities for organizing a number of applications, it is likely that no two Mac owners will have identical setups. But there are some general strategies that you can use as starting points in establishing your system.

If almost all your work revolves around four applications or fewer, consider keeping your Mac desktop free of clutter by dragging those applications from the disk window onto the desktop itself. Then close the hard disk window, leaving only the hard disk, Trash, and application icons showing on the gray background. In Figure 6, for example, the four applications are *Excel*, *MacWrite*, *MacDraw*, and *MacTerminal*. The icon for *MacTerminal* is actually one of the program's documents, which contains communications settings for CompuServe at 300 bps. The icon for the *MacTerminal* program is in the HD 20's disk directory, or it can be in a nested folder. To use this arrange-

ment most effectively, it is important to resize the disk window so that the two rightmost columns of icons on the desktop are still visible when the window is open. Leave space along the right edge of the screen for floppy disk icons below the HD 20 icon.

Further supporting this desktop icon arrangement is a feature of Finder 5.1 that lets you open windows without having the windows "remembered" by the Finder. If you hold down the Option key while double-clicking disk and folder icons, the windows open—to show a document icon, for example. Then if you double-click the document icon and start the program, the windows are forgotten. When you quit the program and return to the desktop, all windows will have been closed, speeding up the return to the desktop. (With the 128K ROM, setting the cache memory in the Control Panel to 64K or 128K also speeds up your return to the desktop.) For some users, this layout of frequently used program icons is more flexible than the MiniFinder, despite the latter's speed advantage, because you also have quick access to folder windows and document icons.

■ Getting Started

Application icons can also be grouped within nested folders inside the HD 20 disk window for a more conventional layout. One alternative is to group several applications in a task-oriented folder according to your typical work flow. For example, if you frequently shift *Excel* spreadsheets and graphics into *Microsoft Word* weekly reports and then send those documents to another Macintosh via modem with *MacTerminal*, you might place all three application

■ ■ ■ ■ ■ *Even without an HD 20, the 800K disks offer room to create task-oriented application disks.*

icons in one folder labeled Weekly Reports. Other possibilities include grouping applications that you use together, such as for graphics (*MacPaint*, *MacDraw*, *MacDraft*), music (*ConcertWare* +, *MusicWorks*), writing (word processor, spelling checker, outliner), or programming (language compilers and utilities).

In some cases it may be convenient to have more than one copy of a program on the hard disk—for example, *MacDraw* in both a graphics folder and a presentations folder. For another methodology of grouping applications under nested MiniFinders, see "A Hierarchy and 20 Megabytes," *Macworld*, January 1986.

If your hard disk computing experience includes an MS-DOS or similar computer with a tree-structured directory system, you may try to organize your applications by placing each one in a separate folder and then nesting folders for each program's documents. You would end up with folders for *MacWrite*, *MacPaint*, *Omnis 3*, and so on. This procedure is like putting kitchen silverware into four drawers—one drawer each for knives, forks, teaspoons, and tablespoons. Bringing together the requisite pieces for a table setting becomes a cumbersome task. Although the one-program, one-directory layout makes sense in the IBM PC world, in which few applications can share data, it is largely unproductive in the HFS.

Even if you don't have an HD 20, the 800K disks offer plenty of room to create task-oriented application disks, just like the previously mentioned task-oriented application folders on the HD 20. For example, you might group *MacWrite*, *MacPaint*, *MacDraw*, and the LaserWriter System on one disk dedicated to creating text-and-graphics documents, then group *MacWrite*, a

spelling checker, an outline program, and an Image-writer System on a disk dedicated to word processing drafts.

Organizing Documents

Although applications and their support files may require special attention to placement in the HFS, documents can usually be placed anywhere (see "Potential Problems" for possible exceptions). The danger of this flexibility lies not with the HFS but with the person constructing the hierarchy of files and folders. You will probably be torn between two mutually exclusive desires: to keep folder nesting to a minimum and to keep the number of documents per folder to a minimum.

If you nest folders too deeply—the HFS can easily nest more than 50 levels deep—you spend too much time digging through the hierarchy for the folder holding a given document. This is particularly true as long as there is no global search utility program that can find a file name anywhere on the disk (third-party developers are surely working on such a creature). Five or six documents per folder plus one or two folders is currently the most comfortable number, because you can look at the entire contents of a folder inside a Standard File dialog box without scrolling the listing inside the box.

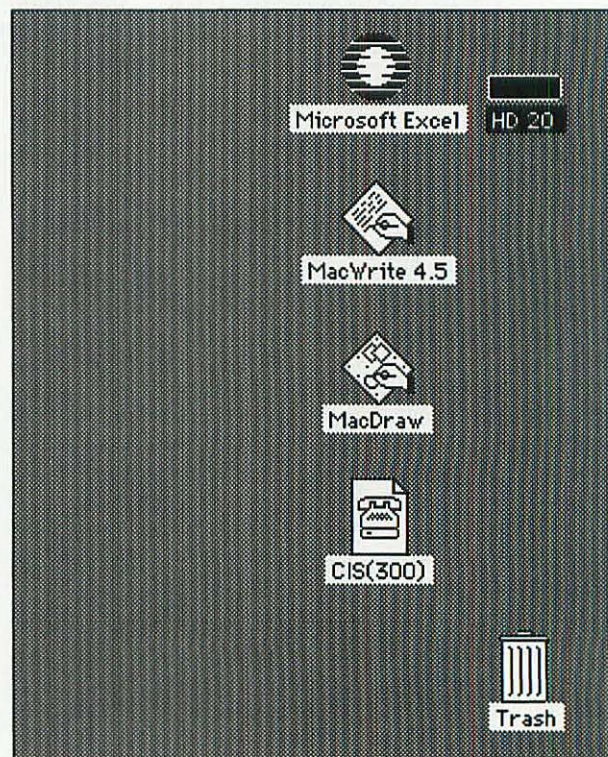

Figure 6

When all your Mac work revolves around a few heavily used applications, you can place those programs' icons on the desktop to keep the desktop clutter-free. Unlike with the MiniFinder, you can still open the disk window to access document icons directly.

To establish a document organization strategy, you have to examine carefully the way you normally work with documents. The method you choose for the HFS may be different from the flat file system you're accustomed to (Finder 4.1 and earlier).

One strategy is to create a folder in the root directory for each major project you work on. Inside that folder could be folders for components of the project. If you are producing an annual report, for example, the folder in the disk directory might be labeled Annual Report. Inside that folder would be folders labeled Scheduling, Text, Graphics, and Budget. Inside Scheduling would be a *MacProject* production schedule document and perhaps a database document for tracking photographs to be taken for the report. Inside the Text folder are two more folders: Words and Numbers, which contain the text and financial figures documents, respectively. The Graphics folder contains *MacDraw* and *MacPaint* documents, while the Budget folder contains a single *Excel* document for the project's budget.

When you finish a work session, copy the entire folder to a floppy disk (or to a second hard disk or tape drive if you are so equipped) as a backup of the day's changes. If the folder is larger than the floppy disk (either 400K or 800K, depending on your Mac's configuration), open the project folder and divide the backup

operation into as many pieces as you need by copying some of the nested folders to one floppy disk. To determine the size of a folder in Finder 5.1, you select the folder icon on the desktop and choose Get Info from the File menu.

To help keep the disk directory clutter-free, place folders of completed projects inside another top-level folder labeled Archives. The disk directory then predominantly displays folders of active projects.

Another solution, for a different work pattern, is to create disk-level folders for each client, customer, or department for which you do work. A writer, for example, might keep folders in the root directory for each publication. Inside one of those folders would be a folder devoted to each project for that publication, and inside a project folder might be further folders for correspondence, text, graphics, and so on. Fortunately, each project folder can have nested folders with the same names for the sake of consistency across the entire disk.

The two methods just described mesh well with a Macintosh user's propensity to combine several applications for one project or task. If your organizational needs are more unidimensional, you can establish disk directory folders for each document type: reports, correspondence, budgets, databases, and so on. From there you can create alphabetical folders just like the tabs on hanging file folders.

If you generate tons of documents, you can literally create 26 folders inside the correspondence folder, one for each letter of the alphabet. When you're ready to file a letter, you just issue the Save As command from your word processor and use the HFS Standard File dialog box to open the desired folder from the alphabetical listing (see Figure 7). It's just like thumbing through a filing cabinet and dropping the paper into the appropriate folder.

With so many different ways to work with the Mac and with so many possibilities offered by the HFS, new methodologies and organizational systems will abound for a long time to come. Be on the lookout for tips from *Macworld* and Macintosh user groups. □

New Relations

Jim Heid

Database management is one area of software with a proliferation of programs for the Macintosh. At least a dozen programs are already available, and more are in the offing. They range from simple file managers to fully relational databases. This review focuses on three new relational database managers that have some of the advanced features required by businesses.

Although any database manager can store and retrieve information, businesses require programs that can handle tasks such as client tracking and billing, inventory control, and accounting—applications that are too demanding for most file managers. What's more, businesses often need special features such as password protection to help guard sensitive data, entry checking to help uncover errors as they're made, and mail merge commands that combine text with stored data to produce "personal" form letters.

Interlace, *MacBase*, and *Omnis 3* are designed to meet the demanding data management needs of businesses. All three programs are relational data managers, which means they can link separate data files to create a database containing information from both. With them you can store customers' names and addresses in one file, for example, a list of their orders in another, and the prices of items ordered in a third. At billing time, a relational database manager can extract data from all three files to print an addressed invoice for each customer.

Businesses that have complex printing requirements need a program that facilitates easy report design, with full access to the Mac's fonts and the abil-

ity to work with the LaserWriter. And although it doesn't affect the product's ability to do the job, a well-designed program should let you move items by dragging them and let you produce reports without repeated trial-and-error position adjustments.

Whether you need these features depends on your work. The following reviews zero in on the applications and work styles for which each product is best suited. The vital statistics of the programs and those of a few other database management programs are shown in the table "Databases at a Glance." In addition to the three programs reviewed here, a few other database managers meet the requirements of business (see "Data That Means Business," *Macworld*, August 1985).

Interlace

One reason people use spreadsheet programs such as *Jazz* and *Microsoft Excel* for database management is that their many built-in functions let you analyze data instead of simply storing it. Financial, arithmetic, and trigonometric functions for solving business and engineering problems have traditionally been the domain of spreadsheet programs. Most database managers can perform simple math as well as calculate totals and averages in reports, but they can't calculate sines and cosines, determine net present values, or add and subtract date values.

Singular Software calls *Interlace* "a database manager with a spreadsheet on its mind." From a calculating standpoint, that billing is accurate. With 49 arithmetic, text, and statistical functions—almost as many as *Microsoft Multiplan* provides—*Interlace* can handle business and engineering calculations that would stump most data managers. If you use a spreadsheet program to manage data but find its filing and

reporting skills limited, *Interlace* presents an appealing alternative. If your reporting needs don't involve complex calculations, *Interlace* is still worth considering, although it does have some limitations that warrant scrutiny.

Getting an Overview

You create an *Interlace* database in the Overview window, which shows the structure of database files and remains on the screen while you use *Interlace*. Using the Overview window, you add new fields and specify the kind of data they hold. *Interlace* provides fields for storing text, numbers, and other types of data, but it doesn't provide a calculated field type—a curious omission for a program that purportedly has arithmetic prowess.

The Overview window also lets you specify relations between files by creating a special link field in each file and dragging the link field of one file to that of another. *Interlace* depicts links graphically by drawing lines between linked files (see Figure 1). With most data managers—especially ones for the IBM PC—linking files is a difficult hurdle that newcomers face. By making the abstract concept of file linking a concrete, visual process, *Interlace* simplifies the process of creating multiple-file databases.

Unlike most Mac database managers, *Interlace* can access up to 15 files simultaneously and provides a Window menu for switching between them. They can be files linked to form a complete database, unrelated files that you want convenient access to, or a combination of linked and separate files. The ability to open numerous files and reports, whether they're related or not, increases *Interlace*'s flexibility. It is a good choice for people who make frequent use of two or more databases in the course of their work day.

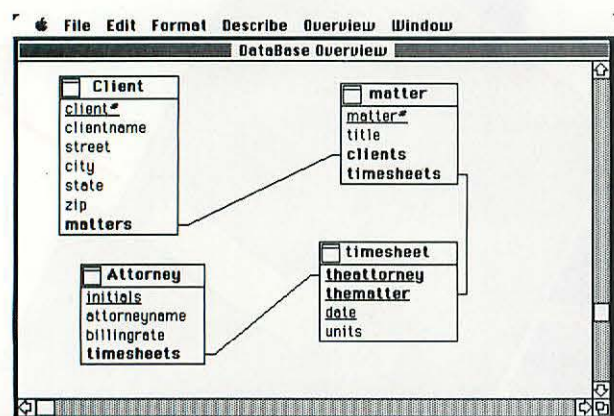

Figure 1

With *Interlace*, you specify relations between files by creating a special link field in each file and dragging the link field of one file into that of another. *Interlace* depicts the links with lines between linked files. Here, the Overview window depicts an attorney's client billing database, made up of four linked files. Underlined field names are key fields. *Interlace* uses them to sort data and differentiate records.

One Thousand Characters

You open a file for data entry by double-clicking on its title bar in the Overview window. *Interlace* automatically creates simple data entry screens—a time-saving feature that lets you start entering data immediately. You can also customize the preset data entry screen by dragging fields into position.

Unfortunately, *Interlace* stores no more than 1002 characters in each record, or less than one screen of single-spaced 12-point text. This amount is adequate for most applications because a typical field is usually less than 30 characters in length. However, if you require long text fields for tasks such as storing paragraphs of research notes or magazine article abstracts, you could easily run into *Interlace*'s space limit. Although it is somewhat inconvenient, you can use the program's relational capability to work around this limitation. First, store most of a database's brief information, such as names, addresses, prices, and amounts, in one file. Then link the file's records to another file that contains corresponding records with one or more large text fields. If you require fields longer than 1002 characters, you should consider a different program.

The Formula Approach

With many database managers, you search for specific records by filling in a screen that mimics the data entry form. But *Interlace* favors the approach of spreadsheetlike formulas. A database window contains a formula panel similar to that of a spreadsheet program. You can either type an entire formula or use the mouse to build formulas. The formula approach lets you use *Interlace*'s many functions to create powerful search specifications. It also makes spreadsheet veterans feel at home with *Interlace*.

If you aren't a spreadsheet veteran, however, becoming proficient with formulas may take time. Formulas are built by pointing and clicking, but they are not edited the same way. If you build a formula to locate all clients in a given state and then decide to further narrow the search to those in a certain city, you have to rebuild the formula from scratch or type in the additional criteria.

Putting Data on the Table

Another reason spreadsheet programs are popular as data managers is that they present data in table form. A table display works like a kind of interactive report. Seeing many records at once gives you an overall picture of a database, but you can also enter new records and edit existing ones, which is a convenience that report displays don't offer. Unlike a spreadsheet, *Interlace* can't display a database in table format. You can design a report to present data in table form, but you can't edit or add to the table displayed on screen. If you can't do without table displays, you might be better served by *OverVUE*, *Microsoft Excel*, *Microsoft File*, or perhaps *Jazz*'s database manager.

(continues on page 102)

¹Unlimited. The database manager imposes no practical limit on the number of fields a record can contain; a record can have as many fields as will fit on a form.

²Field types:

- | | |
|---------------------|---------------------|
| 1. text | 6. picture |
| 2. number | 7. sequence |
| 3. date | 8. calculated |
| 4. time | 9. telephone number |
| 5. logical (yes/no) | |

³12-point text only

⁴Sorts on one field at a time but allows sorts on consecutive fields while it maintains the previous sort order.

Databases at a Glance

The table compares the capabilities of the database managers evaluated in this review. Three other database managers are included for comparison. Double Helix features listed here are based on prerelease information from the developer.

Cutting Keystrokes

Danny Goodman

The Macintosh was designed to make computers easy to use. Tempo's keystroke- and mouse-maneuver-reducing macros carry the original principle one step further.

Anything gets old with repetition. Saving your work and ejecting your work disk, for example, doesn't really take that long. But after the first few thousand times the routine of pulling down the File menu, selecting Save, waiting, selecting Quit, waiting, and finally selecting Eject and waiting once more for the song of the disk drives to cease can start to feel like your own private purgatory. Deliverance, however, is at hand. Tempo, a new macro processor from Affinity Microsystems and the most sophisticated macro program yet available for the Mac, lets you perform routine command sequences with a single keystroke.

Tempo is classified as a *macro processor*, which means that it lets you combine a series of keyboard and mouse commands into a single command known as a macro (see Figure 1). Some application programs, such as *Microsoft Excel* and *SuperCrunch*, have macro programming languages that you can use to fashion lists of instructions that the computer will follow when the macro is invoked. Macro programming languages, however, work only within the program for which they were designed. *Tempo* is a generic macro processor that lets you design a macro that can be used with virtually any combination of applications.

Tempo is also easier to master than a macro programming language, because you don't have to learn a vocabulary of commands and a lot of rules about how to use them. Instead, you create *Tempo* macros simply by going through the mouse and keyboard actions for a sequence of operations. *Tempo* records those actions so they can be replayed later.

A macro is most useful when it automates a routine action that requires a number of steps. For instance, if you regularly extract a database record for inclusion in a word processing document, a *Tempo* macro can open the database program, load the data, present the search dialog box, pause while you type in the selection criteria, extract the data, copy it into the Clipboard, close the database program, open the word processing program, and paste the data into the new document. That entire process could be initiated by pressing a two-key sequence, such as ⌘-E .

If you regularly send a spreadsheet file to the home office by modem, you can design a *Tempo* macro that starts working inside your spreadsheet program to save the file, quits the spreadsheet program, starts your communications program, and waits until 11 p.m. to dial the home office computer and upload the file. Some communications software may even allow the *Tempo* macro to respond to a busy signal indication (sent to the screen by the modem) by waiting a half hour before redialing.

On a simpler level, you can program a *Tempo* macro to perform a pull-down menu operation, or a series of menu operations, with a keyboard equivalent. This ability is particularly helpful if a program that you use has no or few keyboard equivalents for often-used commands (*Mac-*

Write is a good example). In the past, you would have needed Apple's *Resource Editor*, a software developer's tool, to set up keyboard equivalents in programs.

Macro Smarts

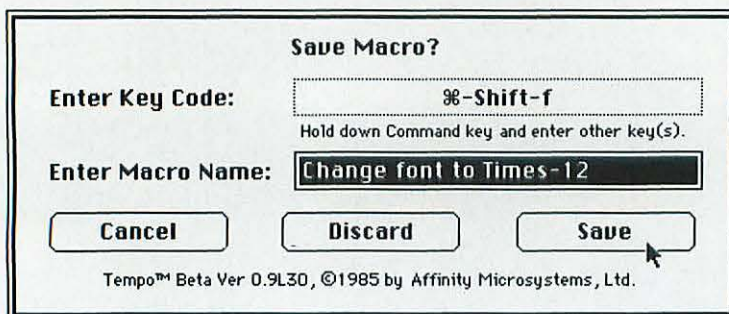

Tempo does more than just record user input. A *Tempo* macro can make limited decisions and even trigger other macros if specified conditions are satisfied. The manufacturer calls *Tempo*'s advanced options "intelligent features," but that's somewhat of an overstatement. The program's branch, pause, loop, and launch options elevate it a notch above Assimilation's *Mac Tracks* macro processor, but they are not "intelligent" in the sense of artificial intelligence programming.

Branching is accomplished by comparing the contents of the Clipboard with a predetermined block of text. For example, you could create a macro that would begin by copying the contents of a Totals spreadsheet cell into the Clipboard. If the number in the Clipboard were greater than 9999, the macro could branch to a short macro routine that would reformat the entire spreadsheet to display large numbers with commas, as in 10,109. *Tempo* provides a full range of comparison operations from which to choose (see Figure 2).

Tempo's pause functions can be used in a variety of ways. Programming a pause into a macro allows you to suspend the macro's replay while you enter data, such as the name of a file to be opened or criteria for a database search (see Figure 3). Another pause option lets you add instructional dialog boxes to remind novice macro users what to do next. And you can delay macro execution until a specified time. This feature enables you to program the Mac to communicate, sort a large database, or print on a shared resource such as an office LaserWriter.

Figure 1

When you finish recording a *Tempo* macro, a Save Macro dialog box automatically appears. You assign a name to the macro and, optionally, one of 450 possible keyboard equivalents to start the macro the next time.

Tempo's looping capability lets you set up repetitive operations, either to be performed a specific number of times or until certain conditions are met. For example, a macro you might add to your communications program could combine branch, pause, and loop operations and could instruct your modem to keep redialing a number until it received a connect signal.

Tempo's launching facility is a big improvement over the launching method used in *Mac Tracks* (in Macintosh parlance *launching* means opening an application). *Tempo* lets you specify the name of an application to launch, while *Mac Tracks* primarily replays the precise motions you make when you record a macro. When you double-click on a program icon, for example, *Mac Tracks* simply records the screen coordinates of the pointer and the fact that you double-clicked the mouse. If you rearrange the locations of icons in that window or move the window around the desktop, *Mac Tracks* positions the pointer in the original screen position—which won't open the program and may do some inadvertent damage.

Macro Construction

Planning is important when creating *Tempo* macros. The manual rightly encourages you to break macros into many small modules. You can then use the modules to assemble larger macros, linking the modules by looping or unconditional branching (conditional branches cannot be used to link macros).

Before specifying a branch instruction, you must have already created the macro to which the first macro branches. In other words, you design and create levels of macros from the inside out. This is not necessarily a technique you'll pick up

immediately, but you'll appreciate its importance after you program your first multiple-module macro (see "A MacTerminal Dialing Directory Macro").

One of *Tempo*'s most intriguing options, Real Time, enables you to create presentations similar to the Macintosh guided tours. When recording in Real Time, *Tempo* makes a literal recording of every mouse movement, including hesitations and speedups. On replay, you'd swear someone was playing with a second mouse under your desk.

Macro-intensive programs like *Excel* can also use *Tempo*. *Tempo*'s ability to cross application lines complements *Excel*'s macro language. You can also place macros into a Set Startup icon that will run those macros whenever the Mac starts with the disk—a convenient way to do daily file maintenance.

Compatibility

Virtually any program that takes control of the Mac while other applications run is destined to encounter compatibility problems on the first release. *Tempo* is no exception to this unfortunate rule. Following is a list of the incompatibilities I discovered:

AppleTalk. *Tempo* runs fine with a Mac-to-LaserWriter AppleTalk installation, but not when AppleTalk is configured as a local area network.

Hard Disk 20. The Apple hard disk presents no problems except when the Mac is connected to AppleTalk.

Jazz. Spurious characters appear in the menu bar when you quit *Jazz*, but they have no deleterious effect on your files. This happens in *MacDraw* and a few other common applications.

Microsoft Word. *Tempo* zips right over seven of *Word*'s dialog boxes before you can make your selections. When this happens, record the macro in Real Time.

OverVUE 2.0. The *OverVUE* screen does not refresh itself after the *Tempo* dialog box closes. Recalling *Tempo* from the Apple menu refreshes the screen.

ReadySetGo 2.0. Manhattan Graphics is reportedly modifying this program to accommodate *Tempo*.

ThinkTank. Risky business.

Switcher. A special case. Version 4.4 is compatible to some extent, but you'll have to allocate up to 15K of additional RAM for each application for *Tempo*'s "overhead." Even then, you won't be able to record a switch between applications (accomplished by either clicking *Switcher*'s dou-

ble-arrow icon or pressing the ⌘-key equivalent). Instead, you'll have to choose Switcher from the Apple menu to return to the *Switcher* screen and then click on the desired application icon. The big hangup with this switch method is that the Clipboard does not convert between applications.

Tempering Tempo

A few words of caution about using *Tempo* are appropriate. First, even though the program installs on a System file as a desk accessory (an installer program is supplied on the disk), it takes up more than 60K on a disk. Not many single-sided application disks have enough space for a 60K accessory unless you delete help files, other accessories, and fonts from the System file. A *Microsoft Word* disk, for instance, comes with 29K available. Deleting the help file, extra printer drivers, and sample document (a total of 45K) leaves scarcely enough disk space for *Tempo* and the file that contains the actual macros (macro files can easily run to 10K or more for active macro users).

If you plan to use *Tempo* macros running across more than one application, you'll have to organize your applications around a single System Folder, creating a startup disk with the System file for the internal drive and an applications disk without a System file for the external drive. You cannot change System files while recording a *Tempo* macro or when *Tempo* is active (when its ⌘-key icon appears in the menu bar).

For example, if you wanted a macro that could copy *MacPaint* graphics into the Clipboard, open *MacWrite*, and paste the graphics, you would create an application disk with only *MacPaint* (70K), *MacWrite* (70K), and the *Tempo* file with pertinent macros (2K to 20K). That would leave 240K or more of disk space free for document storage. For large applications, such as *Jazz* and *Excel*, you'll have to swap systemless application disks in the external drive (while keeping the same system disk in the internal drive) if *Tempo* macros extend across multiple applications—as when linking *MacTerminal* and *Excel* operations, for example.

A Macintosh Plus or a Mac outfitted with internal and external double-sided 800K disk drives offers plenty of space to accommodate *Tempo* and productive groupings of applications.

Figure 2

Your macros can test the contents of the Clipboard against predetermined criteria. Depending on the outcome of the test, the macro can branch to another macro module.

Figure 3

Instructional dialog boxes can be included in a macro. Text for the dialog is typed into *Tempo*'s Options dialog box while you record the macro.

Working with Macros

No matter what kind of floppy disk drives you have, get ready to pay close attention to the location of the *Tempo* macro files. You can access only those macros in the "current *Tempo* drive," which you select from a dialog box when you start *Tempo* from the Apple menu. Generally, you would store macros for a particular application on the application's disk, and you would change the current *Tempo* drive when you change applications by quitting *Tempo* and restarting it to change the designated drive.

Although all *Tempo* macros are grouped together into one file labeled *Tempo* Macros, you can shift individual macros among disks by using *Tempo*'s Import and Export features. Let's say you've

created a macro in one application that copies a selected area, opens the Scrapbook from the Apple menu, pastes into the Scrapbook, and then closes the Scrapbook. Because that macro is practical for many applications, you may want to export it from the current *Tempo* drive to other application disks instead of recording it each time for every disk.

If the other disks already have *Tempo* macros, Export adds the new Scrapbook macro to the existing *Tempo* Macros files; if not, a newly created *Tempo* Macros file will be added to the other application disks. In contrast, Import lets you bring individual macros into the current *Tempo* drive from other *Tempo* macro files.

A MacTerminal Dialing Directory Macro

MacTerminal doesn't have a dialing directory feature, but you could use *Tempo* to create a macro between *MacTerminal* and a desk accessory such as Macadam's *WindWare Phone Book*. Since the macro retrieves only a dial-up service's name from the desk accessory, you can use any kind of phone directory desk accessory, as long as it displays the desired name in precisely the same spot on the screen for each entry.

The first step in designing the macro is figuring out what actions the macro should take. The following procedure outlines the actions:

- Close the *MacTerminal* window.
- Open *Phone Book* from the Apple menu.
- Pause the macro so you can page through *Phone Book* for the name of the service to dial.
- Copy the name of the service into the Clipboard.

- Close *Phone Book*.
- Test the contents of the Clipboard against the services usually dialed. If the Clipboard reads "CompuServe 300," for example, branch to a macro module that pulls down *MacTerminal*'s Open menu and selects the *MacTerminal* document (which contains the communications settings and the service's telephone number) for CompuServe at 300 bits per second.
- Pull down the *MacTerminal* Phone menu and select Dial.

You must create a macro for each service, because each one has its own branch module. Assign only a name (no ⌘-key equivalent) for each module, because you probably won't ever need to call these sub-routines from the keyboard. Then start recording the major macro section by instructing it to branch to the appropriate module if the test of the Clipboard contents proves true (if

Clipboard = CompuServe 300, then BRANCH to CIS 300, and load the *MacTerminal* document with that service's settings). When you finish recording the main macro, assign both a name and a ⌘-key equivalent, such as ⌘-D.

Now, whenever you're in *MacTerminal* and want to dial up another service, such as Dow Jones, press ⌘-D, flip through *Phone Book* for the service number, and watch *Tempo* do all your busywork. You've also given *MacTerminal* a feature it never had before.

WindWare calendar)

Running *Tempo* on a hard disk in which you have one large *Tempo* Macros file is the most practical way to use the program. Macros apparently "remember" the application in which they were created. Therefore, you could assign the ⌘-A key-board equivalent to a macro that chooses Save As from the File menu in *MacPaint* and assign the same keyboard equivalent to a macro in *Word*, even though the Save As option is in a different location in both menus.

Even if you're an extremely energetic macro user, it's unlikely that you'll run out of keyboard commands. *Tempo* provides up to 450 ⌘-key equivalents that use various combinations of the ⌘, Option, Shift, and Caps Lock keys. Of course, it may be counterproductive to generate too long a list of macros that require the simultaneous pressing of enough keys to confound Vladimir Horowitz.

Editing *Tempo* macros presents a potential problem. *Tempo*'s macros are not

translated anywhere into a command language you can edit. Editing requires playing back a macro (you can slow down the playback to better see what's happening), suspending playback, and then issuing menu commands to insert a new sequence or delete the last action. You'll find it easier to divide long macros into smaller modules of ten or fewer actions and then reprogram an erroneous module from scratch.

Tempo is priced \$70 higher than its nearest competitor, *Mac Tracks*. In light of this discrepancy and the pricing levels of other utility software for the Macintosh and the IBM PC, *Tempo* seems overpriced. Although I recommend a macro processor to every Mac owner, I can't unconditionally recommend *Tempo* over the recently updated *Mac Tracks*, unless you insist on *Tempo*'s branching, launching by name, or Set Startup features and don't mind paying the premium. And don't forget the program's incompatibilities, which could cause problems in certain work environments.

But because of its advanced features and (modest) intelligence, *Tempo* could still become the power user's macro processor, and it just might help you put an end to running your mouse through the same old mazes of complex operations. □

BETTER SONY THAN SORRY.

The bomb's up. The system's down. You've lost all your data to disk error because you made a very basic human error. You didn't use Sony floppy disks.

Next time, go with the industry standard, the company who invented the 3.5" disk drive system, and a floppy disk that comes 100% certified error free. Sony.

Only Sony 3.5" micro floppy disks contain such error suppressing materials as patented Vivax™ magnetic particles and a high-molecular DDL™ binder system. This protects your micro floppy disk, and the information on it, for its lifetime; and assures data retrieval in the order you choose. Guaranteed.

So use Sony 3.5" or 5.25" floppy disks, and avoid disk error. If you use somebody else's, you could be sorry.

Tools for Thinking

Tom Maremaa and Daniel Farber

In the fifties John McCarthy, inventor of the artificial intelligence programming language LISP, conceived of a new class of software programs. He called these programs "soft robots," or "agents." McCarthy imagined that soft robots would mold themselves to the needs of users, learn their computing habits and quirks, and even act as agents for change. In maintaining a stock portfolio, for example, a soft robot would track the performance of certain stocks, search databases for key financial information, monitor current political and economic factors, and recommend or initiate courses of action. Artificial intelligence (AI) research has not yet developed any commercially available soft robots, but it has given us the next best thing: expert systems.

Expert systems are an attempt to simulate the knowledge of an expert in a particular area, such as medical diagnostics or automotive engineering (see "Experts on Disk," *Macworld*, February 1986). A few expert system development tools have recently been designed for the Macintosh, most notably Neuron Data's *Nexpert*, which is already finding a wide range of applications in the financial, aerospace, and medical fields.

Developed by a group of software engineers from Carnegie-Mellon University, *Nexpert* allows you to create an expert system for the 512K Macintosh or Macintosh Plus without learning a programming language. By AI industry standards, *Nexpert* offers the

kind of power and flexibility found in expert-system development tools that cost as much as \$80,000, such as Teknowledge's S.I. or Inference's ART. Companies including Hughes Aircraft, Martin-Marietta, and Boeing are currently working with the program (see "Experts on Nexpert").

Basically, *Nexpert* provides a framework in which to build a knowledge base—a set of rules that distill an expert's knowledge. Knowledge bases can have up to 500 rules and can be edited, modified, or even browsed in the form of a collection of flowcharts and block diagrams. To solve problems, *Nexpert* searches through a knowledge base by means of a special *inference engine*, which processes the data and hypotheses entered by a user and yields a set of conclusions. *Nexpert* doesn't replace human expertise, but it helps people understand and solve specific problems.

Creating a knowledge base is the most difficult part of setting up an expert system. All the rules must be written in the IF... THEN format, where IF is followed by a set of conditions (tests to be performed on data) and THEN is followed by a set of actions that take place when all the conditions of the IF statement are met. *Nexpert*'s hypotheses (included in the THEN part of a rule) have Boolean values, which means they can be rated as true, false, or unknown.

Nexpert has excellent tools for developing a knowledge base. The Rule Editor provides a template for creating rules and specifying the arguments, actions, and conclusions you want to include in your knowledge base. A set of operator boxes appears along the left side of the screen; from these boxes you

A man in a blue shirt and dark jacket, holding a wrench, with a 'Nexpert MECHANIC' patch on his jacket.

Experts on Nexpert

Since *Nexpert* was released last October, the government, corporate, academic, and financial communities have shown a great deal of interest in the product. Neuron Data is aiming the product primarily at those Fortune 500 companies and government agencies that have staff AI experts or consultants who can evaluate and implement expert systems.

Neuron Data's Patrick Perez says that his company is also encouraging the development of run-time systems—expert systems that cannot be modified but can read any knowledge base. These programs will sell for \$1000. In addition, the company plans to work with programmers to create consumer-oriented knowledge bases on such subjects as home health care or car maintenance. These programs will be com-

plied, so they can read only one knowledge base, and the cost will be more in line with other Macintosh software. Neuron Data provides free technical support for 90 days and one year of support and upgrades for \$1000.

Nexpert in the Field

Among the first companies to purchase *Nexpert* is Hughes Aircraft. "*Nexpert's* price-performance ratio is a plus," says John Roy, an AI specialist with Hughes. Roy is particularly impressed by *Nexpert's* rule interaction network feature, which makes prototyping and debugging a knowledge base easier than on other systems. He uses the Apopos feature extensively and has a hard disk on which he stores *MacPaint* and text files that are linked to information in the knowledge base.

"*Nexpert's* Rule Editor makes it possible to create knowledge bases without hav-

ing to rely on an AI specialist sitting on the knowledge-domain expert's shoulder," says Roy. "An AI expert is required when you need to control the flow of a program—context and the knowledge processing strategy. But for many applications, *Nexpert's* default strategies are adequate." Roy believes that with good documentation, people without experience in AI programming can develop small, relatively sophisticated expert systems.

As for drawbacks, Roy says that he would like to see more than one rule at a time on the screen. "The program could also have more frames and viewpoints, as in larger systems, where you can freeze a hypothetical situation into five separate conclusions." With *Nexpert* you need to rerun the program with a new set of values for the data for each conclusion.

choose which tests to perform on the IF part of the rules (see Figure 1). Hypotheses, which are entered in a column on the right side of the screen, are rendered true or false on the basis of these tests, or conditions.

Rules can trigger actions that affect the values of data in the system. For example, the Do option lets you assign values that result from computations to any object in the system, and the Show command displays text or graphics relevant to the knowledge being processed—such as a digitized illustration of a problem or solution. Rules also define operations such as calculations; such operations are similar to subroutines within a BASIC program. *Nexpert* lets you create rules that trigger other rules, and rules that link rules, or sets of rules, together through common data or hypotheses. Some rules might take into account uncertainty factors or allow the program to make assumptions about or draw inferences from unknown values.

The screenshot shows the 'Modify a rule' window in Nexpert. It features a menu bar with 'File', 'Edit', 'Expert', 'Encyclopedia', 'Inspector', 'Report', and 'Windows'. The window is divided into several sections:

- Left Panel:** Contains buttons for 'CANCEL', 'CLEAR', 'Yes', 'No', '>', '<', '=', 'Name', 'Is', 'Is=', 'Reset', 'Equal', and 'Unequal'.
- Center Table:** A table with two columns. The first column contains rule components like 'CURRENT-RATIO-CALCU', 'CURRENT-RATIO', 'end-of-sales', 'MONTHS-OF-S-T-DEBTS', and 'CUSTOMERS-MANAGEMENT-ASS'. The second column contains values or actions like '2.00', 'incr', '3', and 'customers-management-remed'.
- Right Panel:** A table with three columns. The first column contains labels like 'Let', 'Retr', and 'Show'. The second column contains values like 'liquidity', 'WORKING-CAPITAL', and 'CUSTOMERS-MANAC'. The third column contains values like 'poor'.
- Bottom:** Three buttons labeled 'OK', 'CHECK', and 'CANCEL'.

Figure 1

The structured rule editor. A rule consists of a list of conditions to be met (IF) and a hypothesis, which is a conclusion reached when the rule applies (THEN). You can also specify actions to be performed once the rule is applied and a context for rules.

The corporate accounting firm of Peat, Marwick, Mitchell & Co. is also evaluating *Nexpert*'s potential for automating its financial decision-making processes, especially in the area of loan-risk assessment. Aerospace companies such as Boeing are also interested, and so is ARCO, which wants to explore *Nexpert*'s ability to create expert systems for various oil drilling ventures. Scientists from NASA's Ames Research Center are exploring possible uses of the program for space shuttle flights and the planned space station. "If it works, we might take it up with us," NASA scientists told Perez.

Martin-Marietta is yet another interested company. Its energy systems, nuclear plants, and space station research would benefit from the increased automation that could be provided by an easy-to-learn expert system.

Albert Gouyet, Nexpert's chief engineer, and two members of Neuron Data's founding trio—Alain Rapaport, a physician with a Ph.D. in molecular pharmacy, and Patrick Perez, a strategic planner who marketed the Mac in Europe—are pleased with the warm reception corporations have given the program.

Albert Gouyet, chief engineer for *Nexpert*, says that the program will eventually have network and multiuser capabilities. "A user will be able to send values from a spreadsheet or a program that monitors a device, such as a satellite guidance system, to *Nexpert* via AppleTalk. *Nexpert* will then run its knowledge processor to diagnose the problem and send the conclusions based on the data back to the user."

At this point, Neuron Data is both delighted and surprised by all the attention *Nexpert* has drawn. Though the program is still out of the price range of the vast majority of Macintosh users, *Nexpert* has set a trend: expert systems, with all their intricacies and complexities, perform well on the Macintosh.

In its present version, *Nexpert* allows only eight conditions and actions for each rule. (To overcome this limitation, simply split the conditions into two rules and link them with an intermediate rule.)

As you create rules, the Rule Editor catalogs them alphabetically by the first letter of the hypotheses (see Figure 2). Alphabetizing the hypotheses makes it easy to find and alter the conditions of any rule. This extensive rule-editing capability effectively gives you the power to solve problems by creating a variety of "what-if" situations, much as you would in a spreadsheet.

The Knowledge Encyclopedia

Once you've entered the knowledge base, *Nexpert* automatically creates windows listing the data, hypotheses, rules, and categories you've input. These lists are essential to the system, since most requests for

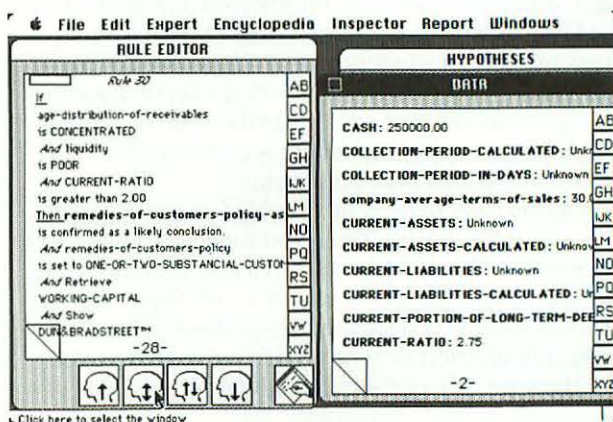

Figure 2

The Rule Editor, a window that duplicates the alphabetized Note Pad but has a series of five icons along the bottom. The first four icons let you create a new rule or modify, delete, or copy an old one. The fifth icon lets you save the knowledge base.

information or explanations involve selecting data, hypotheses, rules, or categories. You can easily browse through the lists to verify their accuracy, see the categories of information in the knowledge base, or look at the Boolean values of data.

You retrieve lists through the program's Encyclopedia menu. Each knowledge type is displayed in alphabetical order in its own Note Pad-style window. The program updates information in the windows whenever the system draws conclusions or the user adds new information to the knowledge base. You can edit the windows, type in text, or cut and paste at any time. You can also store information in the Encyclopedia windows on disk as text files.

Working with so many overlapping windows on screen can become confusing when you have several open windows and want to get at one of them. Like Lotus's *Jazz* and *Microsoft Excel*, *Nexpert* lists the opened windows in a separate menu, for easy tracking. *Nexpert* also displays a line at the bottom of the screen that continually prompts you with on-line help as you move from window to window and icon to icon through the program.

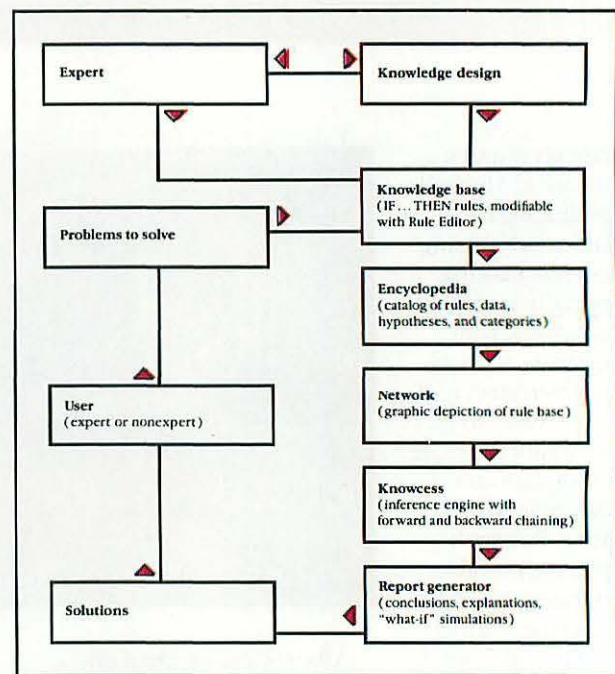

Problem Presentation

After you have created a knowledge base, *Nexpert* is ready to solve problems. The first step in the problem-solving process is to provide information to the system about the problem. One method of presenting information is to input, or *volunteer*, data into the system. The data you volunteer consists of the signs, symptoms, objects, or other information that the program uses to determine whether a particular rule applies. For example, to present an automotive problem, you would select items from the data window—such as choke coil or idle speed—and input Boolean, numerical (real numbers), or descriptive (such as low, high, very high) values. If you selected Idle Speed from the Data window, the program might prompt you to enter a value. For situations in which problems can be consistently described by answering a set of questions, you can create forms to automate the volunteering process. Another way to input data is to read a file of values stored on disk into the system.

A third way to present a problem is to suggest a hypothesis for testing. When you suggest a hypothesis, the system asks you questions that test the validity of the hypothesis. A window called Active Report #1 appears as soon as you suggest a hypothesis. This dynamically updated alert box mechanism lets you follow the state of hypotheses as *Nexpert* tests them.

Problem Solving Approaches

The heart of an expert system is the inference engine, which processes the knowledge base to solve problems. *Nexpert*'s inference engine approaches problems in three ways: Forward chaining is a process

Expert System Design

One of the most critical steps in designing an expert system is ensuring the integrity of the knowledge base. The entire system could be corrupted by inaccurate information. The Macintosh's intuitive user interface augments *Nexpert*'s standard expert system components.

whereby *Nexpert* seeks out hypotheses that match the evidence (data) and investigates them. Backward chaining is the opposite—*Nexpert* works from suggested hypotheses to find the evidence. The third method is a mixed approach in which *Nexpert* gives priority to suggested hypotheses and later focuses on any new hypotheses generated from evidence given during initial explorations. In general, *Nexpert* solves problems through the mixed approach.

Nexpert lets you override the default settings of the inference engine. This ability provides a high level of control over the system, enabling you to focus the search on a specific part of the knowledge base.

A higher-level function of *Nexpert* is the Category Editor, which lets you classify data (conditions or IF statements in the Rule Editor) by categories. The Category Editor makes the system more coherent—more like human thought. A knowledge base may hold all the knowledge pertaining to a field, but the order in which the system requests information during knowledge processing may be inappropriate. For example, an expert system in medicine that simulates a consultation might ask for laboratory data before requesting

the patient's age or other primary details. The Category Editor lets you assign priorities to each category so that the system investigates data in a meaningful order.

Final hypotheses can also be sorted in categories. If the system discovers several relevant hypotheses, it investigates them in the order of the prioritized categories.

Reaching a Conclusion

Nexpert's Knowcess command activates the inference engine. This command operates only if the system has some information about the problem at hand. The What If command in the Expert menu lets you enter the world of hypothetical alternatives. At any time during a session, or even at the end of a session, you can perform "what-if" analyses by modifying a piece of information, adding new data, or adding new hypotheses. *Nexpert* reinfers its conclusions based on new data or hypotheses.

Another important command in the Expert menu is Load Knowledge Base. If you need supplementary information while working with a knowledge base, you can get it by loading other knowledge bases into the system. In effect, each knowledge base is a module that can combine with other modules to solve a problem. Since you enter all *Nexpert* knowledge bases in a standard format, you can maintain a library of knowledge bases on disk and call up a module as required.

This method is particularly helpful in diagnosing or troubleshooting problems in fields such as the medical sciences or aerospace engineering that require different sets of knowledge to resolve. The system also accepts SYLK format files, so you can use data imported from an *Excel* spreadsheet in *Nexpert's* calculations.

Nexpert in Action

When the inference engine begins its reasoning process, three windows appear on screen that display information about the current state of the system. These are the Transcript window, which records the entire problem-solving session; the Hypothesis window, which shows the hypothesis that the system is currently investigating; and the Conclusions window, which recaps the conclusions the system reaches.

As the program works on a problem, it occasionally asks the user questions relevant to the reasoning process. *Nexpert* automatically generates questions and formats them in a dialog box, displaying the questions and answers according to the type of value expected (see Figure 3).

A critical feature of any expert system is its ability to explain its own behavior. The Question dialog box allows you to ask why the currently requested data is important to the problem-solving mechanism. If, for example, you want to determine the major reasons why a hypothesis was confirmed, click on a Why button in the Rule, Hypothesis, or Conclusions window. An explanation supporting the system's confirmation

or rejection appears. You can examine the system's solving strategy at a higher level of detail by clicking on the How or Why button in the Explanation window.

Check the Conclusions window to determine what conclusions have been reached at any point in the reasoning process. Clicking on the Why button at the bottom of the Conclusions window gives an explanation for the confirmation or rejection of a hypothesis. Clicking the Apropos button displays any fixed information linked to the selected hypothesis or data.

When you've reached a state in which no other part of the knowledge base is relevant to the current problem and no further information is needed, a window appears indicating the end of the session.

Graphics and Reports

Nexpert lets you link graphics or text to data through the Apropos option; this procedure provides additional explanation of a conclusion. Clicking on the Apropos button yields graphics, such as digitized images or *MacPaint* drawings, or text, such as explanations of computations performed on requested data. Apropos information is available through the Hypothesis, Rule, or Conclusion window. Apropos is also an option in the Encyclopedia menu.

Viewing information graphically makes understanding the complexities of an expert system easier. *Nexpert's* Browse Network option shows you the system's reasoning path toward a given solution by drawing lines between related conclusions *Nexpert* has reached (see Figure 4). This feature enables you to see the sequence of choices leading to a particular conclusion and to determine the role of any rule or set of rules in the final decision. The Overview option charts

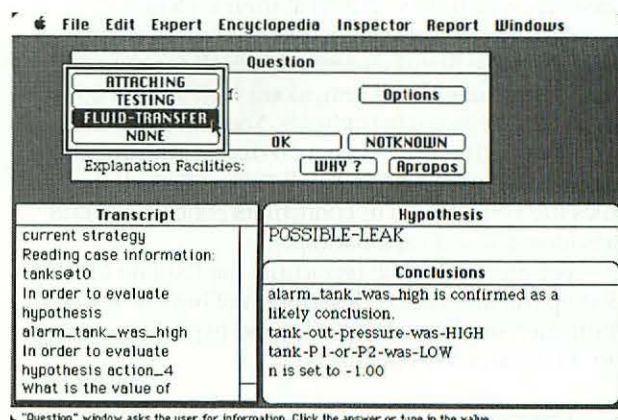

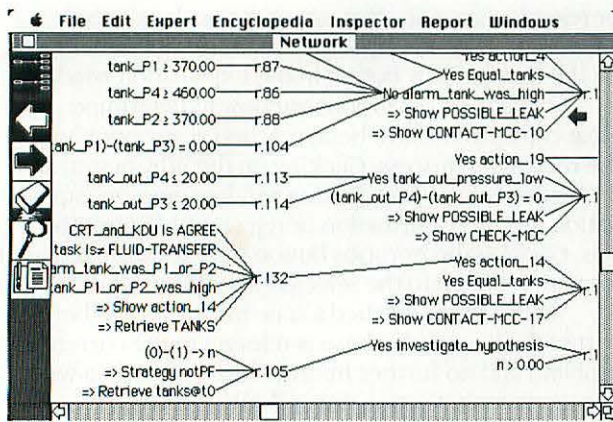

Figure 3

Nexpert automatically asks the user relevant questions as it evaluates a hypothesis. You select Options to input data. The Why and Apropos buttons provide explanations or further information about the current investigation.

Nexpert displays a graphic representation of conclusions reached by the system. The series of icons at the left lets you navigate within the network. Information is dynamically updated as new conclusions are reached.

the entire network. The icons on the left side of the screen let you navigate within the network. You can move through this chart in two directions: from global information (hypotheses/goals) to local knowledge (conditions/data) or vice versa. In either case, this chart effectively shows the connections between various parts of the knowledge base.

Within one session, the Inspector receives the information from each inference and dynamically updates and redraws the knowledge base chart. A menu option lets you change the graphics settings so that you can tailor the knowledge chart's size, fonts, and icons. When different people investigate the same problem, printing out the entire chart reveals the processes by which they arrived at their conclusions.

Nexpert reports can be printed out or saved to disk. The Case Status command lists all the data relevant to the current problem, along with a list of confirmed and rejected hypotheses. You can print Case Status immediately or store it on disk at any time during a session with *Nexpert*. Full Report lists all the rules the system used to confirm its conclusions and provides detailed explanations.

For more selective reporting, the Explain Conclusion option gives a text description of how *Nexpert* confirmed or rejected the rules and hypotheses that led the system to a conclusion.

Overview

This article describes only some of the significant features and functions of the program. *Nexpert* gives you a great deal of control and flexibility. The program looks and feels native to the Macintosh, taking full advantage of the mouse, cut and paste capabilities, pull-down menus, and windowing environment. Without

doubt, *Nexpert* is one of the most advanced software programs yet to come to market for the Macintosh or any other microcomputer; in its own field *Nexpert* is comparable to the number-crunching power of *Excel* or the seamless integration of *Jazz*.

Intended primarily for the specialist—the financial planner, engineer, medical doctor, or expert system developer—the program's ease of use opens the door to a broader range of professionals. However, a programming novice or a person with little understanding of AI principles can take advantage of only a fraction of the program's power. A knowledge base could help a stockbroker with some training make decisions regarding a client's portfolio, for example, but unless the stockbroker had some knowledge of cognitive science, computer science, or artificial intelligence, developing and using the knowledge base in a sophisticated manner would be difficult.

For the uninitiated, *Nexpert* is like a complex, abstract work of art: appreciating it requires a lot of systematic thinking—even given the program's well-designed user interface. A simplified version of *Nexpert* aimed at less technical users, more thorough documentation with tutorials and technical support, and a lower price would bring Neuron Data's expert system technology to a wider spectrum of business and education professionals. In the near future we hope to see more Macintosh expert system development tools emerge from Neuron Data and other companies—tools that would allow more of us to use our expertise to create knowledge bases that could be universally understood and applied to a host of modern-day problems. □

List price: \$5000, run-time only \$1000

◆ ◆ ◆ ◆ ◆

◆ ◆ ◆ ◆ ◆ ◆ ◆ ◆ Tom Maremaa is
a software developer and a former

senior writer for InfoWorld magazine.

Daniel Farber is an Associate Editor of Macworld.

For all of you who thought Dennis Brothers was crazy to give away MacTEP, here's MicroPhone.™ The one he's selling.

When the Macintosh first came out, the most powerful personal computer ever built didn't have the brains to make a phone call.

So Dennis Brothers tore down his Mac, figured out how it worked, and wrote Mac's first communications program, MacTEP.

Which he proceeded to give away.

MacTEP was a classic. The first standard in Mac communications.

Now he's created the second: MicroPhone. A program that goes far beyond any communications software currently offered for any computer.

MicroPhone is so sophisticated, it cuts through the worst tangles you encounter when you go on-line. A delight to the experienced. And a saviour for the novice.

Run on automatic.

When you open MicroPhone to the desktop you'll find a comprehensive collection of icons pre-programmed to access all major information services: CompuServe,® Dow Jones News/Retrieval,® The Source,™ Delphi,™ the works.

A few clicks and you're in. With automatic log-in and sign-on.

But that's just the beginning of its ability to automate the whole telecommunications process. For MicroPhone features the most powerful, yet simplest to set up macros ever seen on a program.

Write your own script.

Dennis gives you two ways to create these macros. The first is to set MicroPhone in the Watch Me,™ the recording mode.

The program looks over your shoulder as you conduct a communications session following your keyboard and menu commands.

MicroPhone can remember not only an uninterrupted string of keyboard commands, but also wait-for-prompt conditions. In fact, virtually any series, no matter how long or complex.

The entire sequence is saved. To be invoked at any time with a single key command.

The second way to generate macros is through MicroPhone's unique "Script"

window. Open it and you'll discover an extensive set of functions which can be called up and linked with a series of mouse clicks. The resulting macro is extremely powerful. The method is Mac-simple.

Using Watch Me or the Script window, or a combination of both, you can automate log-ons, file transfers and unattended operations. And navigate back into the farthest reaches of any database with a single stroke.

Make files fly.

Sending and receiving files is faster and easier with MicroPhone, too. Using XMODEM protocols and MacBinary, MicroPhone transmits or receives anything you can create on a Macintosh. Including MacPaint documents, text, spreadsheets, charts, database tables, or programs.

MicroPhone allows you to scroll back and forth at high speed to review your session. Then you can select any portion of your session, print it, save it to a file, or copy it to the Clipboard for use by other Macintosh programs.

MicroPhone also features an editor desk accessory for composing text in mid-session using familiar Macintosh editing techniques.

But enough talk. See for yourself what Dennis Brothers has done now to advance the cause of telecommunications. Just take any major credit card in hand and call us toll free to place your order.

Dennis isn't giving it away this time. But at \$74.95, almost.

SOFTWARE
VENTURES

Let's get technical box.

Runs in terminal emulation mode at speeds up to 57.6K Baud. Emulates DEC™ VT52™, VT100™ and TTY type terminals. Supports TEXT (ASCII) and XMODEM (Christensen) protocols, send and receive. Supports MacBinary. Runs on 128K and 512K Macintosh. LaserWriter compatible. Includes Switcher for use with other Macintosh programs. Compatible with Hayes, Apple and other leading modems. Built-in full text editor licensed from Dreams of the Phoenix Inc. Documentation by Neil Shapiro.

Putting VideoWorks to Work

Erfert Nielson

Most people think of VideoWorks as entertainment software. But this animation program has a serious side as well. The next time you find yourself illustrating a business presentation using MacPaint, MacDraw, Microsoft Chart, or another venerable member of your software collection, consider adding the element of motion to help get your point across. VideoWorks can add life to charts, tables, and even memos, making a report or presentation catch the viewer's eye.

The project described here—the creation of a memo that comes to life, followed by an animated bar chart—gives you an idea of *VideoWorks*' potential as a business presentation tool. Perhaps you'll use some of the techniques shown here in your own animations. You should be familiar with basic *VideoWorks* terms and procedures (see "A Moving Pixel Show," *Macworld*, November 1985).

A Sample Scenario

Describing an animated sequence in writing is like trying to teach someone a dance step over the phone: something is lost in the translation. The following description, however, combined with Figure 1, should give you an idea of how the animation proceeds.

A disk, labeled simply "Ticket Sales Chart," is inserted by the manager of a small movie theater. The first half of the animation is a memo with a chart showing the number of tickets sold each month from July

through December. What appears to be a document created with *MacWrite* and *MacPaint* is immediately displayed on the screen. After 5 or 6 seconds, however, the movie projector logo suddenly sputters to life. The reels spin, the projector's motor whirs, and the title of the presentation appears on the movie screen.

Then the ticket sales chart appears on the Mac's screen. One by one, strips of tickets rise from the bottom of the chart until the month's total is reached, at which point the number of tickets sold pops on screen. December was a record sales month for the movie theater, a fact that is dramatized by the last strip of tickets breaking through the top of the chart, complete with flying debris and the sound of an explosion.

Plan Ahead

Before you begin a *VideoWorks* production, you should have a clear idea of how you want the finished animation to look. This means mapping out, either in your head or on paper, the steps your animated elements, or *sprites*, will follow. Organizing an animation in advance keeps you from running into editing problems several hours into a project.

Be as economical as possible in the number of separate elements you animate. Animating numerous, graphically complex sprites uses up memory and slows down the animation. The two parts of the animation project described here are relatively small (8K apiece) and could be created on a 128K Mac. You may need to use a 512K Mac for more ambitious animations.

Another factor to consider is *foreground priority*. The first sprite you place in an animation is in the background. The second sprite added overlaps the first, the third overlaps the first two, and so on. Insert-

1:1 17/26 A14X9 FUJI PHOTO

1/3 1/3

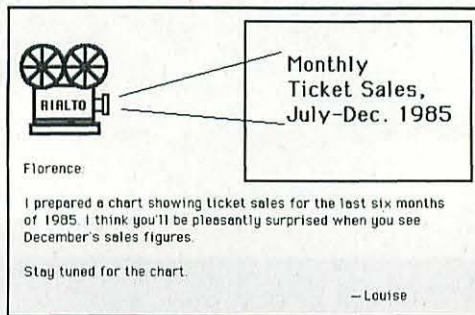

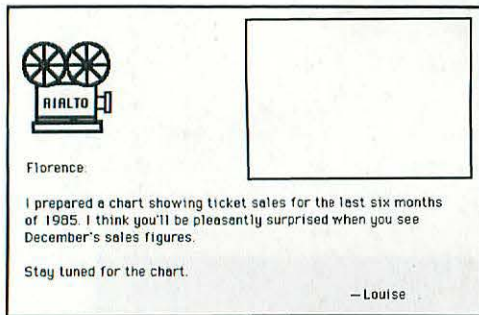

Figure 1

It's not quite poetry in motion, but this animated memo and chart is eye-catching nonetheless. The animation starts with a cover letter that looks ordinary enough until the projector in the letterhead beams the chart's title on a screen. The chart itself follows, with ticket strips climbing one after the other up the heretofore empty grid.

ing background sprites first saves you editing headaches. (Read the "Hints, Tips, and Caveats" section of the *VideoWorks* manual for more information on streamlining the animation process.)

The Moving Memo

The movie theater memo is the simpler of the two sequences. This animation has only five elements, or *castmembers*. They are, in order of appearance, the movie projector, the text of the memo, the rectangular movie screen, a slightly altered version of the projector, and the projector beam and presentation title. *VideoWorks* provides a low-rent version of *MacPaint* called *CheapPaint*, but I drew the projector in *MacPaint* so I could make use of T/Maker Graphics' *ClickArt Effects*, a *MacPaint* desk accessory that slants, rotates, and distorts selected objects. Draw the projector's film reels using the circle and straight line tools and then use *ClickArt Effects* to rotate the reels a few degrees. Copy the original projector and add the rotated reels to the second projector. Save the document and copy it to a data disk.

To begin building the animation, open a new *VideoWorks* file and select *CheapPaint* from the *Windows* menu. Then select *Art Grabber* from the *Apple* menu and "grab" the original projector from the *MacPaint* document. (*Art Grabber* lets you open *MacPaint* documents from within *VideoWorks* and paste pieces of them into *CheapPaint*.) Pasting the projector into a *CheapPaint* easel automatically adds it to the *Cast* window as the first *castmember*.

Type the text of the memo with *CheapPaint*'s text function and then use the rectangle tool to create the movie screen. Next, use *Art Grabber* to place the second projector into a *CheapPaint* easel and into the *cast*. Finally, draw the projector beam and type the title that appears on the movie screen. With the five *castmembers* safely ensconced in the *Cast* window, save the file. It's a good idea to save frequently; even with careful planning you may occasionally need to use *Revert* to return to the last version saved if an experiment proves spectacularly unsuccessful.

Since none of the *castmembers* in the memo do much in the way of jumping about on screen, animating the memo is fairly easy. Click the first projector in

the *Cast* window and drag it into position on screen. Then add that *castmember* to the first channel of the animation with the *Step* command (⌘-S). Open the *Score* window, highlight 80 frames of channel A (the projector sits idle for several seconds, as you'll recall), and use the *InBetween* command to place the projector in all 80 frames. Follow the same procedure to place the text and the movie screen in the first 80 frames of channels B and C.

To start the projector rolling, use the *Switch* command to replace the first projector's image on screen with the second's. With the *Step* command, place the second projector in frame 81 of channel A. Then use *Copy* and *Paste* to place alternating images of the first and second projector in the next hundred or so frames of the score, creating the illusion that the reels are rotating. You have to copy and paste repeatedly; begin with the initial pair of alternating images and double the number of frames in the sprite each time you copy and paste. Play back the sequence as you put it together to see what the animation looks like.

To complete the animated memo, add the projector beam and title beginning at frame 81 of channel D. Drag that *castmember* into position and then select *Or* from the *Efx* (special effects) menu so the beam of light appears transparent, allowing the screen to show through behind it. Make sure that the playback head—the black square that runs along the bottom of the *Score* window—is positioned under the proper frame before you add the projector beam and title to the score. Add the idling motor sound effect from the *Sfx* menu to the score and adjust the animation's speed in the *Panel* window to complete the first half of the animation.

Top of the Chart

Make a backup copy of the first sequence and take a break. You're now ready to proceed with the second part of the presentation. The first element to enter in the animated chart sequence is the background rectangle, complete with title, numbers along the left side, and dotted lines delineating each thousand tickets sold.

The next *castmember* is the strip of tickets, which you can draw with *CheapPaint*'s filled rectangle and pencil tools. Although the strip of tickets appears six times in the animation, you insert it into the *Cast* window only once; for each month you drag the same *castmember* into position on the screen, adding it to different channels with the *Step* command.

To animate the strips of tickets, which climb smoothly up the chart, place the first strip directly beneath the bottom line of the chart and then select the Tweak window, which allows you to move an object a precise number of pixels in a specified direction. In this case set Tweak to move the strip of tickets 3 pixels up and 0 pixels horizontally (see Figure 2). Clicking the Tweak window's Do It button moves the strip of tickets straight up 3 pixels. Add a frame after each tweak with the Step command, repeating this procedure until the strip reaches its proper height. Then add the number of tickets sold at the top of the strip. Each of these numbers is a separate castmember, created with CheapPaint's text function.

Because the second strip of tickets starts rising after the first strip reaches its full height, choose an insertion point in the Score window that begins animating the second strip after the first one stops moving. Repeat the procedure for each strip of tickets (see Figure 3).

The final strip of tickets bursts through the top of the chart, producing a small explosion as several chunks of the chart fly through the air. Each chunk is a separate castmember, added to the score at the point when the tickets first hit the top of the chart and animated frame by frame. To complete the chart-bursting effect, insert the medium explosion from the Sfx menu into the score so that it is in sync with the tickets breaking through.

At this point the animation is nearly complete. You are faced with a ragged array of ticket stubs hanging below the chart, however. I had to experiment a bit to cover them up. Draw a black, borderless rectangle in CheapPaint, place it over the unsightly ends of the ticket strips, and select Bic (Blank is changed) from the Efx menu. This special effect causes a black castmember to turn white if it's placed on a white background. To finish the job, add the months July through December to the bottom of the chart.

You now have two *VideoWorks* documents, which you chain together into a continuous presentation. Open a new *VideoWorks* document and choose Demo List from the File menu. A dialog box appears, asking for the list of the documents to include in the playback sequence. Type the names of the documents in the order you want them played and click OK. Then save the document as Demo List and return to the desktop.

To begin the presentation as soon as the disk is inserted, use *VideoWorks* Player from Hayden's *Macro-Mind Utilities Disk (M.U.D.)* collection. This 13K utility allows you to play back *VideoWorks* animations without the *VideoWorks* application itself. For an animated presentation that gets moving at startup, copy the System Folder and VW Player from the *M.U.D.* disk onto a blank disk, along with your animation documents and the Demo List document from the *VideoWorks* disk. Insert the new disk, click the *VideoWorks* Player icon, and select Set Startup from the Special menu. Now you have a presentation disk that automatically starts the animated memo and continues with the ticket sales chart.

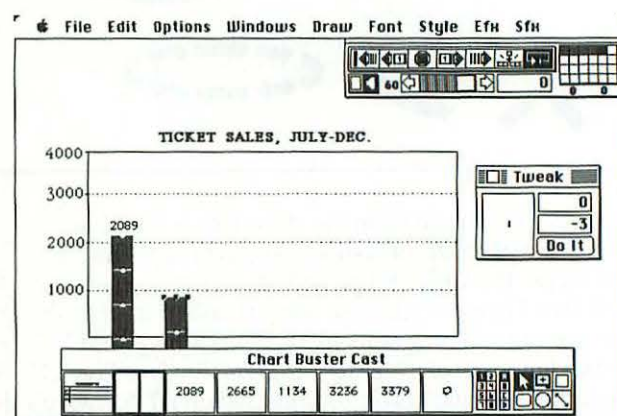

Figure 2

VideoWorks' Tweak window allows you to move a selected castmember a specified number of pixels horizontally and vertically. Here the strip of tickets for August is set to move directly up the screen 3 pixels at a time.

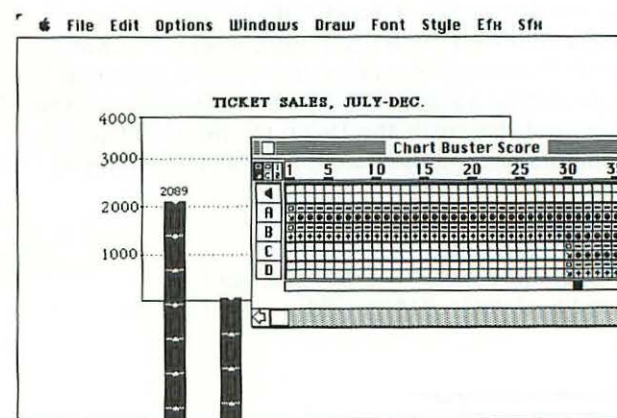

Figure 3

So that the ticket strips appear in sequence, the first frame of the next ticket strip appears in another channel of the score after the last strip stops. In this Score window the July ticket strip in channel B stops moving in frame 29, and the August ticket strip in channel D makes its appearance in frame 30 and starts climbing in frame 31.

Figure 4

You don't have to start from scratch when animating charts. VideoWorks' Art disk contains this chart kit with arrows, pie slices, a three-dimensional grid, and other handy graphic elements. Graphics pasted in from other programs, such as Microsoft Chart, also save you from working over time.

As you can see from this description, creating even a simple VideoWorks animation entails quite a few steps. The Chart Kit provided on the program's Art disk (see Figure 4) can save some time and effort, as can companion programs like ClickArtEffects and three-dimensional graphics programs such as Enabling Technologies' Easy3D and Challenger Software's Mac3D. You might want to use screen shots of Chart, Jazz, or Excel charts as the basis for an animation, saving you the trouble of drawing the initial chart or graph. Although you'll find putting together a VideoWorks business presentation more time-consuming than creating a graph with Microsoft Chart or an organizational chart with MacDraw, I think you'll find the results more rewarding and the presentation more effective as well. □

***We'll Give You A Hand With
EXCEL***

**Notes...™ is Your
Shortcut to Excel**

Comprehensive on-line information on all the commands and functions of Excel gives you quick access to key information. Use the Table of Contents, the find command, or the over 300 interactive cross-references. **Basics** gets you started while **Expert Tips** and **Advanced Features** put you in command of the power of Excel.

Speed Data Entry

Shortcuts and tips show you how to operate Excel more efficiently such as choosing among selections in a dialog box or moving around the spreadsheet without using the mouse.

Create Custom Number Formats

Notes explains how to create your own custom number formats for part numbers, dates, social security numbers, and more.

Macros Made Easy

Notes makes Macros easy with step by step instructions. Learn how to use Excel's Recorder to create command macros for automating worksheets and how to create function macros.

Mailmerge With Excel

Notes shows you how to merge letters with your mailing list. It also shows you how to create specialized reports and use wildcards with your databases.

Charts: Which One to Use and How to Create Them

Notes advises you on which type of graph to use and how to create it. Notes helps make graph creation simple.

Templates to Run Your Business Today

12 Templates for Accounting, Finance, and Administrative activities from Cash Journals to Loan Amortization tables to an Employee Database. On-line documentation helps you customize the templates for your business.

Figure Your Payroll With Excel

The Payroll template links with the Employee Database to calculate payroll figures for each period including gross wages, deductions, federal withholding and FICA.

Track Accounts Receivable and Payable

Track outstanding invoices and bills and keep on top of how old each receivable or payable is. Automatically calculate the average age of your receivables and payables.

Analyze Your Cash Flow

Review cash in and cash out projections to be on top of your cash needs. Tie Cash Flow into the budget template for even better planning.

Graph Your Sales and Profit Margins

Spot trends in your financial statements with Excel charts linked directly to the Financial Statements template.

Tap the Power of Excel Database Commands

See how to use the Series command to create date labels and calendars. Tap the power of the Tables command by using Notes.

Document Your Own Work

Add your custom notes into Notes to document your own templates, provide help for others, or just add your own personal tips and reminders.

Notes for Jazz™ offers the same great shortcuts and templates.

The Telecom Link

Tom Moran

Would you like to have direct access to Apple's technical databases? Receive answers to most of your technical questions in minutes? Send an E-mail message to a dozen remote locations in a minute or two? All without learning a complex command structure?

For years analysts have agreed that vast new telecommunications markets would open up when the thorny problem of the human interface was solved. The observers have said that until telecom services become easier to learn and use, they would only attract hackers and sophisticated business

Marie O'Connor of Future Information Systems' Manhattan branch shows how the 22-store chain keeps in touch via AppleLink.

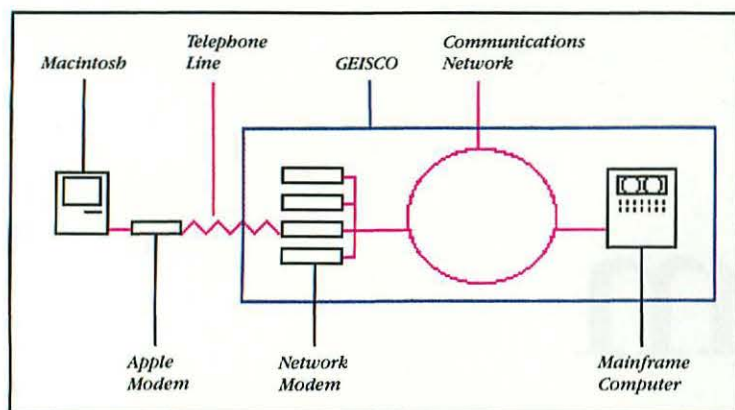

Figure 1
From Mac to mainframe: With AppleLink, GEISCO's Mark III network connects Apple dealers, developers, and user groups to Apple-related databases.

users. AppleLink, a telecommunications package that combines the powerful Macintosh human interface with GEISCO's (General Electric Information Systems Company) enormous network system, may prove to be just the revolutionary telecommunications product to do the trick—and a means of elevating Apple's products to where few Macs have gone before, Fortune 500 Heaven.

AppleLink replaces the complex commands of most telecommunications systems with the Macintosh's familiar desktop metaphor and straightforward user interface. To access the system, insert an AppleLink disk, choose Connect, and type in your password; AppleLink accesses GEISCO's Mark III network, the largest commercial distributed network in the world (see Figures 1 and 2). A distributed network stores data in more than one place, in this case in three locations in the United States. The GEISCO mainframes now contain software that allows them to understand and answer queries from Macintoshes. You can access the GEISCO mainframes from 750 cities in 31 countries.

After connection, the AppleLink desktop containing icons for different services appears. The services vary according to whether the user is a developer, a user-group representative, a dealer, or an employee of a dealer (see Figure 3). Newspaper icons appear for Apple corporate news and other news services; library icons appear for databases such as technical information, sales and support, and product and service prices. An Alert icon indicates crucial messages from Apple.

Clicking on a library icon brings up a search window where you enter key words or phrases and click on Search Library to initiate a full-text search. A full-

text search is more comprehensive than a keyword search, which looks only at words and phrases previously indexed. AppleLink indicates the number of references found, and you widen or narrow the criteria to get a manageable number of folders containing the keywords. When you click Display Selections, you see the contents of the folders. The host software on GEISCO's mainframes keeps track of "no hits"—searches that get no answer. If enough queries on the same subject go unanswered, the program alerts the system administrator so an answer can be found. The program also notes if a particular user keeps missing the mark, so the system administrator can advise more effective search strategies. By navigating the technical libraries, dealers and developers get rapid answers to technical questions 24 hours a day, seven days a week without relying on Apple's technical support staff.

As powerful as the database features are, AppleLink's centerpiece is its electronic mail. On the right-hand side of the AppleLink desktop are an In Basket and an Out Basket. Large arrows in the baskets indicate the presence of messages. The electronic mail capability lets any Apple employee, dealer, developer, or user-group administrator communicate quickly and rapidly with another AppleLink user. AppleLink transfers binary files, software, graphics, spreadsheets, and so on. (Off-line composition of E-mail messages re-

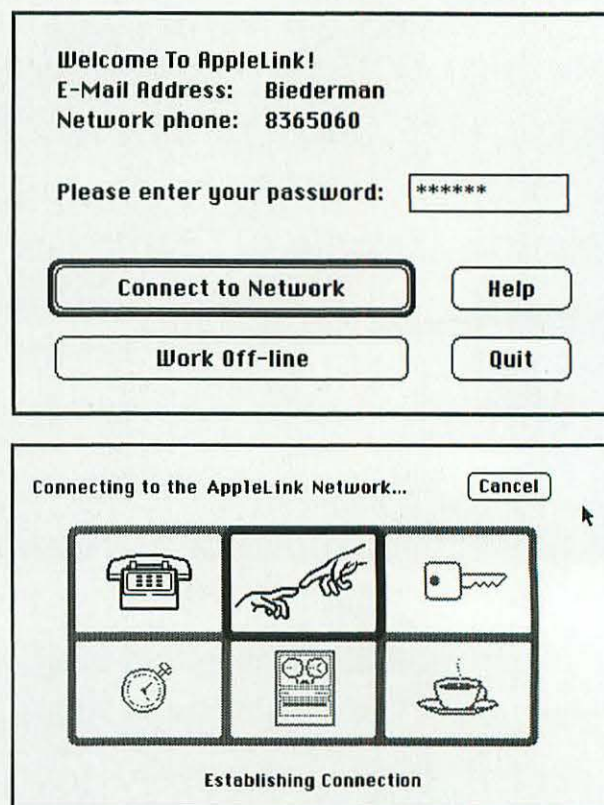

Figure 2
To connect to AppleLink, you need only enter your password. A series of symbols marks the progress of the automated log-on.

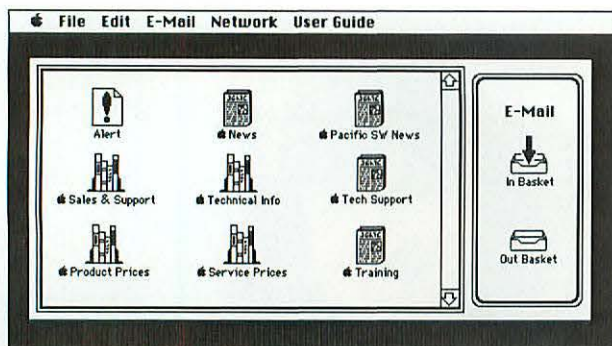

Figure 3

Once connected to the remote mainframe, desktop icons help AppleLink users navigate through Apple's database libraries and electronic mail system.

duces connection time.) You can cut and paste from E-mail, database, or bulletin board files to E-mail messages, and you can use the service to transfer graphics files from *MacPaint*, *MacDraw*, and *Jazz*. The system can transfer documents created with applications such as *MacWrite*, *MacTerminal*, Macintosh Pascal, Microsoft BASIC, and others.

AppleLink began as a technical support service for dealers. Before AppleLink, dealers could call Apple's support department only during West Coast business hours, and even then they would often get a busy signal. But since AppleLink became available to dealers last July, they have 24-hour access to a technical support database.

AppleLink gives Apple better customer support; improves communication with dealers, developers, user groups, and its own sales force; and provides huge savings in printing and mailing costs for price lists, technical updates, and other communications with dealers.

Mac Interface the Key to AppleLink

Apple's Jim Hoyt, who worked with Pete Burnight of Central Coast Software in Santa Cruz, California, to create AppleLink, says that Apple wanted to eliminate typed commands completely. "What we tried to do with AppleLink was to take all that stuff out of the way," he says. "We really tried for transparency."

Ali Saeedi, who is in charge of operations at Infomax, a chain of computer stores in Northern California, says AppleLink takes advantage of the Macintosh's simple user interface. "As a result, the AppleLink interface is very simple and intuitive." Infomax's need to communicate—among its own stores as well as with Apple—is so enormous, says Saeedi, that telephoning takes too much time.

"With AppleLink you can send a message to a lot of people in a short time. Before, we had to call Apple or send an order [for merchandise] by Federal Express; now we just type it in on AppleLink, and in 5 minutes

the Apple support center has the order." Saeedi also likes AppleLink's technical support features, which have made it possible to answer many more customers' questions on the first try than before. "Our people depend on it now, which is saying a lot."

Saeedi believes that AppleLink's user-friendliness makes the system superior to IBM's dealer support system, CSS (Customer Support Service). "From IBM I get a steady stream of memos and documents that come Federal Express every day," he says. "They also send the same information through CSS, which is good, but because the user interface is not as good and not all [of IBM's] stores have CSS, all that information has to be sent by Federal Express anyway."

Peter Friedman, manager of desktop communications marketing at Apple, says that AppleLink is an excellent example of how the Mac, "with all its advantages in the communications arena, really makes information a usable resource." Friedman points out the Macintosh's ability to navigate through the information system: the Mac provides "a visual metaphor for communication so it's much more understandable. [And] you can create, manipulate, and transmit graphics." Friedman says that the development of communications solutions characterized by these Macintosh advantages is "one of our future directions."

BusinessTalk: AppleLink for Business

GEISCO, which developed the mainframe end of the AppleLink software, was so impressed with AppleLink that the company adopted Macintosh hardware and software for its BusinessTalk product. The main difference between AppleLink and BusinessTalk is that Apple set up AppleTalk for its own dealers, developers, and others, while GEISCO is marketing BusinessTalk to the Fortune 1200 as a network that can be tailored to fit. GEISCO will help companies create their own proprietary networks, all functionally equivalent to AppleLink but dedicated to the individual companies' needs. GEISCO's first product under the umbrella of BusinessTalk was DealerTalk, aimed at companies that want to offer the service to their dealers.

Alma Rodoni, manager of dealer systems marketing for GEISCO in Rockville, Maryland, says a manufacturer would use DealerTalk much as Apple uses AppleLink—for such applications as E-mail, new product announcements, price updates, and updates to technical specifications. "The real benefit of the system is that information can be communicated immediately, accurately, and simultaneously throughout the channel," she says.

AppleLink is such a powerful idea that, according to Rodoni, GEISCO is working on a version for the IBM PC. Rodoni says the company will try to introduce that new product later this year.

Long-Term Links

Although it started as a service to Apple's employees and dealers, AppleLink is already evolving into Apple products for others. Apple is adding 900 hardware and software developers to the AppleLink, according

to Ellen Nold, Apple's manager for support programs, and Apple now has a pilot program to support user groups. In the works are a version for the Apple II and, as a long-term prospect, a product purely for consumers.

In January Apple announced a joint venture with MCI and Dow Jones. Sources close to Apple say that the joint marketing agreement with MCI and Dow Jones will produce a very powerful, simple-to-use E-mail package. The first AppleLink-based service to even approach the end user is a pilot program for user groups; Apple plans to get this program on-line this spring, according to Ellen Petry Leanse, Apple's user group "evangelist." Unfortunately, only user-group bulletin board administrators will actually have access to AppleLink. They will act as go-betweens for Apple and the users, screening users' questions and relaying answers from Apple.

The pilot program will involve 40 to 60 user groups, says Leanse, but the services to the user groups have yet to be determined. To start with, "We will at least give them access to technical libraries, Apple corporate press releases and product announcements, and direct access to user-group support at Apple," Leanse says. The pilot program will also provide a read-only bulletin board, she added.

John Zeisler, manager of business marketing for Apple, speculates, "Ideally you'd be able to walk into a retail store and buy a user kit, and maybe an administrator's kit." An administrator's kit would allow you to set up bulletin boards, add and delete users, and help build a database. The user kit would give the same kind of capability that AppleLink or BusinessTalk provides. The hope, Zeisler says, is "to let a small distributor who wants to communicate with 20 key customers have the same capability that Apple has or any of GEISCO's customers has."

Zeisler points out that because Apple owns the rights to the source code of the file server software that resides in GEISCO's mainframes, the potential ex-

Ellen Nold, Apple's manager of support programs, looks forward to a network for consumers.

ists to port AppleLink to other networks. "It's hard to speculate, but it could be transported to other systems with a moderate amount of work," he says.

According to Zeisler, Apple is committed to seeing that communications products work on the Macintosh family and, "most importantly, that they work with the same user interface whether you're communicating with Dow Jones, or a private network like the AppleLink network, or a vertical market database. There are no specific product plans, but obviously we believe that this is strategically a very important market for us."

Hoyt, Apple's chief architect of AppleLink, says Apple is working on an Apple II version of AppleLink to be aimed first at the education market.

Jan Lewis, industry analyst and president of Palo Alto Research Group, says that the exciting thing about AppleLink is that it offers the best of both worlds. Lewis expects that the new combination of a graphic human interface with networking will encourage tremendous growth at the consumer level. "We already had a healthy market before we tied into the human interface, and I think this will greatly expand the user base. We could be seeing the jumping-off point in telecommunications that people have been predicting for years," Lewis says.

With GEISCO hoping to bring out an IBM PC version of BusinessTalk sometime in 1986 and Apple adding programs for developers and user groups, by year's end we could see a raft of powerful new telecommunications programs, mostly for medium-size and large businesses. But by the time that the largest and most profitable markets are established, small-business and home users will clamor for the E-mail, technical support, and news service features of these systems. □

AppleLink's easy interface opens doors for Peter Friedman and John Zeisler of Apple marketing.

HOW TO ADD INCREDIBLE SPEED AND STORAGE TO THE MACINTOSH PLUS

Introducing
HD-20™ and
HD-30™

The 20 megabyte and
30 megabyte Hard Disk
Drives for Macintosh Plus

Adding storage and speed to a Macintosh Plus is easy. Place the HD-20 or HD-30 under your Macintosh and save desk space. Connect the drive to the SCSI expansion port and you can transfer data 16 times faster than many current hard disks.

Turn it on and it automatically boots up. The HD-20 and HD-30 both support Apple's new Hierarchical File System, and they are expandable to add more memory devices or tape back-up units.

See MDIdeas' HD-20 and HD-30 at your authorized Apple Dealer and be sure to ask about Apple's "We're in Business with Macintosh Plus" promotion. During this promotion all purchasers of the HD-20 and HD-30 will receive a free booklet entitled, "Hard Disk Usage for the Macintosh" and free hard disk back-up software.

Offer expires 4/30/86.

Macware Reviews

*PC MacBridge, Consultant, Fokker Triplane
Flight Simulator, Hard Disk Util, The Housekeeper,
Mouse Exchange BBS, and 4Paint*

Edited by Erfert Nielson

Bridging the Gap

In the interest of furthering peaceful coexistence between Apple and IBM, Tangent Technologies recently released **PC MacBridge**, an add-on board for the IBM PC (and PC compatibles) that lets you attach the PC to the AppleTalk network and use it with Apple's LaserWriter. PC MacBridge comes with a collection of programs. LaserScript allows *WordStar*, *Multimate*, *1-2-3*, and ASCII text files to be printed on the LaserWriter, giving PC owners access to the printer's powerful PostScript page description language. (While the IBM PC version of *Microsoft Word* already has the ability to produce PostScript output for the LaserWriter, PC MacBridge allows multiple PCs to share a LaserWriter using AppleTalk.) LaserGraph lets you create bar, pie, and line graphs on the LaserWriter. Mail-Box allows file transfer between the PC and other computers.

The PostScript Advantage

In addition to letting *WordStar*, *Multimate*, and *1-2-3* send output to the LaserWriter, the PC MacBridge software provides commands that take advantage of some of the features that make PostScript so attractive. For example, the *WordStar*-to-PostScript converter provides commands for selecting a typeface, printing super- and subscripts and strikeout type, justifying or centering lines, and printing characters other than the standard ASCII symbol set. Other commands let you select the dimensions of a page, set tabs for use with proportional fonts, change character

size or line spacing, send new font-family definitions to the printer, insert graphs into text documents, and insert PostScript commands into text documents.

Placing PostScript commands in text documents enables you to easily insert graphics into a page of text. For example, using this feature you could create a small file containing the PostScript commands for printing a horizontal bar. Then, whenever you wanted to insert a bar into a document, you could simply specify the name of the file. Unfortunately, the PC-PostScript connection isn't flawless; for example, when converting *WordStar* files to PostScript, the PC MacBridge software doesn't change the location of *WordStar*'s line breaks. To justify the right margin, the

conversion software adds spaces between words to make all lines the same length. This can result in text that is excessively "airy."

PC MacBridge gives you extra options for printing spreadsheets and can improve the appearance of business graphics. The PC MacBridge conversion program for *1-2-3* lets you print extrawide spreadsheets by using a small font and printing the spreadsheet in landscape (sideways) orientation. Laser printing is a real boon for *1-2-3* graphs; the LaserWriter's fonts make much more attractive graph labels than Lotus's fonts.

From PostScript to Postman

As if the features already mentioned were not enough, PC MacBridge moonlights at yet another job, opening up an electronic mail link over AppleTalk from PC to PC or from PC to Macintosh. The Macs must be running Videx's *Mail Center* electronic mail program; the PC end of things is taken care of by the PC MacBridge software.

A typical E-mail application might be the creation of a newsletter. After generating articles on a PC running *WordStar*, you could send text to a Macintosh, lay it out using Aldus's *PageMaker*, and then print the newsletter on the LaserWriter. Another example would be sending 1-2-3 spreadsheets to a Macintosh, where they could then be transferred to *Excel* or *Jazz*.

PC MacBridge's one drawback is the fact that it includes an enhancement board; the board isn't necessary for printing, since a PC can be connected to a LaserWriter using a standard serial cable. If you're interested only in laser printing and don't need electronic mail, you may want to save PC expansion slots for other boards. Anticipating this need, Tangent offers LaserScript/S, a version of LaserScript that lets you connect the PC directly to the LaserWriter with a serial cable.

Will the Apple LaserWriter, assisted by PC MacBridge, succeed on Big Blue's home turf—the large corporations? My hunch is that it will. The LaserWriter opens doors to professional-quality presentation graphics, near-typeset-quality documents, desktop publishing, and a wide variety of fonts—capabilities that many companies will find too good to pass up. —*Ted Nace*

Given the Advantage . . . Your Mac will RISE to the Occasion!

Seize the MacAdvantage for \$79.95 and realize your Mac's potential.

MacAdvantage: UCSD Pascal operates directly under the Mac's operating system and Mac's own interface for program development. You can write programs that execute directly under the Mac's system and use virtually all the Mac ROM calls!

MacAdvantage includes:

UCSD Pascal Compiler

Supports an enhanced Pascal language designed specifically for accessing Macintosh ROM routines. Your application may include pull-down menus plus access to Desk Accessories, multiple Windows and Mouse routines. Our compiler generates extremely compact code and supports the separate compilation feature so you can write large programs on any Macintosh, from the 128K Mac to the top of the line.

Editor

A powerful mouse-based editor lets you alter existing text or create new files. Editing operations (Cut, Copy, Paste) are all performed with the mouse. You can even edit two files simultaneously and copy text from one file to another.

Debugger

A symbolic debugger steps you through your program instruction by instruction.

ROM Interface Units

For virtually all Macintosh ROM routines. These units allow you to create programs that use the Macintosh User Interface.

RMaker

A resource compiler that lets you take advantage of the Macintosh's powerful resource concept.

And now seize the further MacAdvantage:

Buy the MacAdvantage: 68000 Assembler for only \$79.95!

Designed to be used with the MacAdvantage: UCSD Pascal®, the package includes a **Linker** program, a **Code Mover** utility for installing device drivers and desk accessories, a **low-level debugger** and set of **definition** files for interfacing to the Mac ROM and operating system.

UCSD Pascal - the original standard of Pascal programming excellence. The new leader in Pascal price/performance.

with financial planning by giving instant numerical answers to "what-if" questions. Project management software can aid in planning and managing complex tasks by finding critical paths through PERT charts. *ThinkTank* provides flexible tools for organizing ideas in hierarchies. But as good as these software tools are, they're generally of little help with work that doesn't fall neatly into their areas of specialization. And then there's *Consultant*.

A Generic Problem Solver

Consultant is a unique program for analyzing and solving problems. Designed by a team of—what else?—consultants, the program is a software encapsulation of time-honored principles of decision making, scientific inquiry, planning, problem solving, and selling. *Consultant* doesn't do the work for you; it simply provides thinking aids and problem-solving procedures.

It's up to you to provide the relevant information, ideas, and final decisions.

Consultant aims to be a general-purpose problem-solving tool, and the developers recognize the fact that different kinds of problems lend themselves to different procedures. Menus represent a variety of approaches: Begin, for getting started; Detect, for doing detective work about past events; Discover, for applying the scientific method to a situation; Create, for creatively exploring future options; Plan, for building and following steps to a concrete goal; and Sell, for convincing others that you've come up with something worthwhile. Each menu contains a sequence of steps designed to solve the problem at hand. Using *Consultant* is simply a matter of choosing a menu and answering the questions posed by each step.

Icons Whispering in Your Ears

Because *Consultant* is designed to work with all kinds of problems, some of its questions may seem vague and difficult to apply to specific situations. Whenever you're stuck, you can check with the Tutor (represented by a mortarboard icon) to

find out why *Consultant* is asking a particular question, or the Coach (baseball cap icon) for specific how-to help and examples.

Not all of the questions are easy to answer, so *Consultant* provides a number of thinking aids. On the left side of the screen are icons for four idea-generation aids: Brainstormer, for spewing forth ideas; Questioner, for answering questions; Combiner, for mixing and matching ideas; and Scenario, for telling stories. On the other side of the screen are the analytic decision-making aids: Prioritizer, for ranking items; Grader, for assigning a score of 0 to 10; Rater, for grading items based on two equal criteria, such as validity and relevancy; Evaluator, for weighing options with multiple criteria; Relater, for determining interdependencies that govern which things must be done before other things can happen; and Categorizer, for grouping items. If you feel overwhelmed by icons, you can click icons at the top of the screen to see a written summary of the aids below.

It's time for all smaller businesses

**Open Systems introduces
Open For Business.™
Accounting software
solutions designed to
fit the needs of small to
very small businesses.**

Until now, smaller businesses either settled for manual book-keeping systems or costly service bureaus. Not any more. Now there's Open For Business I and II.

Open For Business I is the ideal entry level software package.

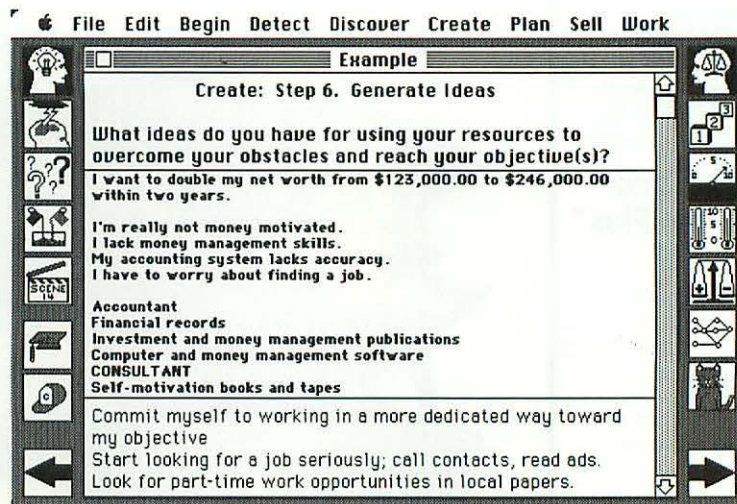

Open For Business II is the software package specially designed for small companies with somewhat larger needs.

Both Open For Business products provide key business indicators that have never been readily available to the smaller

The Consultant Is In

Consultant has a wide variety of applications. I spoke with a free-lance photographer who uses it for thinking up marketing strategies, planning exhibits, and generally providing creative nudges. A financial planner uses the program to define the markets he wants to penetrate, and a CEO of a small corporation brainstorms with *Consultant* for sources of capital.

I applied *Consultant* to several problems of my own, including that classic, "Too many things to do and not enough time to do them." When the program asked me for my "mission," I found myself looking for an overall goal that could justify being so busy, which forced me to see the problem from a slightly different point of view. The program asked me to choose the appropriate procedure for my problem, and I chose Create. The procedure led me through several time-consuming steps that involved making lists: pertinent facts, objectives, obstacles, resources, and ideas for using resources to overcome obstacles (see "What's Your Problem?").

Some of the analytic tools proved helpful here—especially Prioritizer and Evaluator. These tools forced me to break difficult questions into simpler questions that almost answered themselves. When I finally reached the last step in the process, I saw that several of the "critical" items on my must-do list didn't seem important at all when considered as part of the big picture. But I wasn't surprised; I'd figured that out while working through the steps.

What's Your Problem?

Consultant provides a wide range of problem-solving aids that help you define the problem at hand, establish a goal, list the resources at your disposal, establish priorities, and arrive at possible solutions.

The Final Decision

I like *Consultant*, but I doubt that I'll use it much. After years of training and experience with problem-solving methodology, I find that the program doesn't do much that I can't do faster or more thor-

(continues on page 144)

to stand up and be accounted.

business before. Now, for the first time, you can actually measure the "health" of your enterprise at a glance; receive immediate status reports of current sales and expenses; and even generate graphic displays of specific sales and expense reports.

And of course, both Open For Business products are backed by Open Systems, whose reputation for unsurpassed quality and client support has set new industry standards.

So stand up and be accounted. Call 1-800-328-2276 right now.

(continued from page 143)

oughly in some other way. For brainstorming, I'm more comfortable with *Think-Tank*'s blank slate approach than with *Consultant*'s incessant questioning. For quantitative decision making, I like to set up models I can see and change using *Excel*. While *Consultant*'s systematic approach did help me view certain problems in a new light, \$200 is a steep price for a personal problem-solving aid.

If I managed an organization, though, I'd almost certainly spend some of my training budget on a copy of this program and encourage my employees to try it. While *Consultant* doesn't provide as much personal attention as a workshop or a human consultant, its interactive nature makes it easier to use than any of the how-to books that cover the same ground. The program could prove useful when used periodically to keep committees and other groups focused on particular goals. But like a relaxation tape or a weight-loss clinic, *Consultant* may prove most valuable when it's returned to the shelf because the skills it teaches have become second nature. —George Beekman

Meanwhile, in the Skies over France...

You're flying deep behind enemy lines and have just spotted a signal from one of your spies. You're low on fuel, but you know the signal means he's captured important documents. It's up to you to retrieve them. You throw caution to the wind—and your aircraft into a steep, diving turn, preparing to land and rendezvous. But a quick look to the rear reveals that the enemy is closing fast on your tail!

What now, von Richthofen? You can either continue with your landing, hoping to evade the enemy, engage him in a fierce aerial dogfight, or... hit the pause button, think it over for a while, and resume combat once your jangled nerves have settled. This is not World War I, but 1986, and you're seated at the controls of **Fokker Triplane Flight Simulator**, a new offering from PBI Software.

By the time you find yourself in the situation just described, you will have logged a few hours in the Fokker, for the program is a flight simulator first and a challenging

game second. Before you start earning medals, you've got to learn to fly your crate. If you're put off by the program's 46-page manual, you can begin with Quick Flying Instructions, a short course that lets you get the craft airborne immediately. Once you tire of crashing every time you get near the ground, you'll want to proceed to Ground School and Flight School.

Fancies of Flight

As a flight simulator, *Fokker Triplane* is surprisingly realistic. As in a real airplane, engine sound varies when power is added or reduced or when the aircraft climbs or descends. To further increase the sense of reality, factors such as wind direction and cloud ceiling can be adjusted to create challenging flying conditions.

You use the mouse as the control stick to climb, descend, or turn. Throttle and rudder controls are simulated on the keyboard. You scan the horizon for enemy aircraft by pressing keys that let you look left,

right, or over your shoulder (see "Enemy at Six O'clock"). Cockpit instruments are nicely detailed, highly responsive, and realistic in their operation—although the panel takes more than a little historical license (if Baron von Richthofen had had digital readouts and sophisticated radio navigation, we'd all be speaking German today). The graphics depicting the world outside the plane are less detailed but more than adequate, adjusting constantly as you slip through the skies.

Enemy at Six O'clock

Fokker Triplane's pilot can look to the left, right, or rear of the plane. (In a rare deviation from the program's realistic simulation, the control panel always remains in view.) Here, the enemy is in hot pursuit and immediate evasive action is required.

Into the Breach

After a successful landing or two and a cross-country trip to one of four friendly bases, you'll lust for the taste of combat. If you think you're already an accomplished aviator, beware; danger awaits in the skies above. Choosing Armed vs. Unarmed from the Game menu gives you the advantage of ammunition while your enemy has none.

Pascal for the Mac!

Only \$99.95

The MacLanguage Series™ Pascal compiler.

The first native code Pascal compiler for the Macintosh!

Pascal

- Creates double-clickable applications
- Creates desk accessories

Now used in Apple's Mac High School, Dartmouth College and several other major universities!

Complete access to:

- Quickdraw
- Toolbox
- Operating System
- Printing
- Packages
- Serial Drivers
- Fixed-point Math
- 3D QuickDraw
- MacinTalk speech synthesis
- AppleTalk network
- HFS
- Built in compiler support for all SANE floating point types

Versatile:

- Compiles Lisa Pascal programs
- Compiles MacPascal programs
- Integrate MDS assembly routines

Works with:

- 512K Mac, Mac XL or Mac Plus
- Hard Disks including HD20
- Extended Memory
- HFS (Finder 5.x)

Three Compilation Modes:

- Compile to Object code (MDS .Rel files)
- Compile to Assembly source code (MDS .Asm files)
- Check Syntax only of a program

And now TML Systems Introduces:

MacLanguage Series Development Tools

MacLanguage Series Linker/Librarian	\$59.95
MacLanguage Series Database Toolkit	\$89.95
MiniEdit for MacLanguage Series Pascal	\$19.95
MacExpress™ for Pascal from Alsoft	\$495.00

DataSpace
corporation

DataSpace makes Sense

DataSpace brings together all the components you were promised for your Macintosh™ office of the future. The DataSpace MAX printer buffer is more than just a buffer. Connected to the AppleTalk™ network it acts as a printer server, allowing up to 31 Macintoshes to share a single printer. The MAX can handle several print jobs from different Macintoshes. This means the MAX can continue to accept print data from one Macintosh, while another document is still being printed.

The DS800, our 800K external disk drive simply plugs into your 128, 512 or Macintosh Plus. No software or modifications are required! Its quiet operation makes it a perfect companion for your Macintosh.

Now you can make sense out of your Macintosh office. Visit your local Apple dealer for a demonstration today, or call us directly on our toll free number.

(continued from page 146)

But the enemy is tenacious and will run into you, knocking you out of the sky despite his lack of armaments. Following a dozen or so such incidents, you'll find yourself going back to the manual to learn the daring aerobatics taught in the Military Training section.

Your missions will be many and varied. To earn your wings, you must shoot down enemy balloons, destroy fuel depots at enemy bases, fly under bridges, and retrieve documents from spies hidden deep in enemy territory. You must also keep a careful eye on fuel and ammunition levels and navigate back to a friendly base to refuel or reload when either gets low. All the while you'll be tormented by enemy aircraft, which you must either evade or fight.

Patience and Skill

The difficult task of mastering the aircraft is what I like best about *Fokker Triplane*. Although I'm an experienced pilot, it took me several flights to get the feel of the Fokker. While the manual makes it clear that this program can't teach you to fly a real airplane, *Fokker Triplane* is a realistic simulation and demands consider-

able flight proficiency before you can engage the enemy in anything but a foolhardy suicide mission.

A jaded pilot once defined flying as hours of sheer boredom, punctuated by moments of sheer terror. *Fokker Triplane* succeeds as a flight simulator because it approximates both of these extremes, from the monotony of a long, cross-country flight to the white-knuckled anxiety of flying in the clouds, evading another plane, or simply lining up for your first landing. *Fokker Triplane* succeeds as a game because it is realistic and exciting and because it places you in a multitude of perilous situations. If you prefer a game that allows you to start blasting the enemy out of the sky immediately—and which will bore you almost as fast—there are many available. But if you like a challenge and don't mind learning a little something along the way, I highly recommend *Fokker Triplane Flight Simulator*. —Walter C. Burns

Hard Disks Made Easy

Most Macintosh software developers have chosen copy-protection schemes that require hard disk drive owners to insert a master disk before a program can be run. This method ensures that the user has the original master disk, which contains a special key, such as an invisible file or a non-standard sector. While it's understandable that software companies want to foil illegal copying of their products, legitimate software owners soon grow tired of irksome requests to insert master disks whenever they run copy-protected programs from hard disks or RAM disks. **Hard Disk Util**, from FWB Software, allows you to use copy-protected programs without first inserting a master disk.

Although sophisticated bit copiers like *Copy II Mac* and *MacBackup* also allow you to back up copy-protected disks, the copies they make are exact duplicates that retain the copy-protection scheme of the original master disk. *HDUtil*, *Hard Disk*

MacBuffer™

The First Print Buffer System for the Macintosh that Really Works, Saves Time, and is Available Now.

Tired of your Mac waiting for the Imagewriter throughout the day? MacBuffer is the solution that works. MacBuffer controls the printer leaving the Mac free to use. MacBuffer's 256K, 512K, or 1 Megabyte of memory, and a super fast data transfer rate can improve your productivity up to 400%. MacBuffer comes with all cables, ready to install. Other features include:

- Compatible with existing Macintosh software and Imagewriter I and II
- Two Macs can share one MacBuffer and printer
- Local Copy and Single Sheet Modes.

Based on either price or performance, MacBuffer is unequalled. For more information see your local Apple dealer or contact Ergotron, Inc.

THERE'S MORE THAN ONE WAY TO SCAN A CAT

When you want to create graphics with your Macintosh, there's no need to pussyfoot around with anything less than ThunderScan. Because ThunderScan® turns any

printed image into a detailed, high resolution Macintosh graphic. Then lets you change and enhance the image any way you wish. With a powerful set of software tools, written by Mac developer, Andy Hertzfeld.

CAT (AKA Kitty)

Start with any original image, black & white or color; up to 14" wide (with a wide-carriage ImageWriter).

CAT SCAN

Now ThunderScan is zipping back and forth, digitizing the image at up to 288 dots per inch, in 32 shades of gray.

CAT'S EYE

...enlarge or reduce...

CAT PRINTS

...then print out your finished work on your ImageWriter or LaserWriter. ThunderScan taps the full resolution of LaserWriter, producing exquisite graphics with up to 300 dots per inch.

CAT CALL

You can even send images from Mac to Mac by modem.

FEED THE KITTY

Feed it into any ImageWriter (I, II, or wide-carriage). ThunderScan simply replaces ImageWriter's ribbon cartridge, so you don't need a video camera.

CAT & MOUSE

With mouse in hand you have micro-control of the contrast, brightness and half-toning. Over all or selected parts of the image. You can scroll, erase, cut, paste, draw...

CATALOG

Cut and paste scanned images into catalogs, newsletters, reports, correspondence, personalized cards and more. ThunderScan works great with page layout software, adding high-quality graphics to your publications.

So you see, there are as many ways to scan a cat as you can imagine. As long as you have ThunderScan. Just \$229 complete. See your Macintosh dealer or contact us.

Circle 167 on reader service card

ThunderScan, as shipped, is compatible with the 128K or 512K Macintosh, ImageWriter I & II and LaserWriter. Compatibility with the wide-carriage ImageWriter and Mac Plus requires accessories. Contact us directly for answers to your compatibility questions.

NOW YOU CAN KICK YOUR MONSTERMAC™ OR MACINTOSH PLUS™ INTO OVERDRIVE™.

LEVCO'S OVERDRIVE HARD DISK SUBSYSTEM.

Combined with Apple's Macintosh Plus or Levco's MonsterMac 2 meg upgrade, *OverDrive* 20 megabyte hard disk system transforms your Macintosh into a powerful, professional work station. Finally, Macintosh owners can have an internal hard disk system that is intelligent, speedy, convenient and reliable.

MACINTOSH PLUS COMPATIBLE

With the introduction of the Macintosh Plus, Apple defined Small Computer Systems Interface (SCSI) as the standard for high-speed Macintosh peripherals such as hard disk drives. Levco is committed to this standard, and has engineered the *OverDrive* hard disk system to optimize the new Macintosh technology.

With *OverDrive*, your Macintosh will automatically boot without floppies by using the HFS system built into the Apple 128K ROMs. The system supports multiple partitions, and includes software utilities for disk management. Since the *OverDrive* SCSI port is functionally identical to that on the Macintosh Plus, generic SCSI utilities and hardware will operate without modification.

Levco offers everything you need to kick your Macintosh into *OverDrive* and into a world of higher performance.

6160 Lusk Blvd.
Suite C-203
San Diego, CA 92121

Circle 493 on reader service card

Util's main program, takes an entirely different approach. Instead of copying whatever file or sector oddities the various protection schemes look for, HDUtil simply alters programs so that they won't look for the copy-protection key. Programs altered, or "patched," in this manner won't ask for a master disk when they're run from a hard disk, a RAM disk, or for that matter a floppy disk. In short, once patched by HDUtil, a program can be copied from one disk to another using only the Finder.

Mastering HDUtil

The first step in circumventing copy protection is to copy the original master disk to another floppy using the sector copier provided with *Hard Disk Util*. You begin this way for two reasons. First, it's not wise to alter the master disk. Second, the copy produced is exactly like the original except it doesn't contain nonstandard sectors or any other oddities the original disk might have had. Because the abnormalities can't be written to hard disks or RAM disks, HDUtil is then used to alter the program on the copied disk so it won't look for the abnormal sectors. Once patched, programs can be copied to either type of disk using the Finder. HDUtil also lets you copy and delete files, verify disks, and change a file's attributes.

One drawback to HDUtil's approach is that in order to install a copy-protected program onto a hard disk, the utility must both recognize the program and know exactly how to modify it. This information is stored in individual patch files that contain the identity and location of the code that must be changed. FWB Software is continually developing and updating patch files, and patches for nearly 80 programs were present on the disk I reviewed in January. Although many games are included in this list, patches for popular business programs are included too. Since programs are modified by HDUtil on a case-by-case basis, you'll need a patch file for each program you want to install. Contact FWB Software for information on specific programs.

Using a different patch file for each program to be copied may sound like the fast lane to obsolescence, but it is actually one of the more innovative aspects of *Hard Disk Util*. Because the information to remove the copy protection from new or updated programs is contained solely in

(continued from page 150)

tiny patch files, there's no need to continually update the HDUtil application itself, only the patches. FWB Software plans to release an additional disk with more patches every three to four months for \$10 to \$20. If you don't want to wait a few months for updates, the manual gives information on a bulletin board system that provides HDUtil patches.

As the *Hard Disk Util* manual states, copy protection is a controversial issue. Many software developers have chosen copy protection as a means of reducing the number of illegal copies made. Unfortunately, this scheme limits the speed and convenience of a hard disk by requiring that master disks always be at hand. It's hard to imagine how anyone who owns a hard disk drive or a large memory upgrade could resist the appeal of never again seeing another dialog box pleading "Please Insert the Master Disk." —David Foster

It Does Do Windows

You may be using one of the many Macintosh desktop organizers to keep your office affairs in order, but chances are your records at home are stuffed into folders, boxes, and drawers. **The Housekeeper**, a home inventory system from Aegis Development, provides an easy way to keep track of personal property. *Housekeeper* is a mini-database into which you enter information about your possessions, such as the purchase date, the cost, and the serial number. You can then use the program to calculate your expenditures by category or to generate police and insurance reports should the goods be stolen or damaged. The program is so compact (17K) that it works well even on a bare-bones 128K Macintosh with one disk drive. (An Aegis representative told me that version 2.0, which works on a 512K Mac or a Mac Plus and is faster than the earlier release, is available

Macware Reviews

(continued from page 152)

free of charge to registered owners.) Information on up to 500 items can be stored on the program disk. An inventory of up to 2000 items can be stored on a single document disk.

Housekeeper is easy to use, even for someone with no previous database experience. The documentation includes step-by-step instructions that walk you through all of the program's features. The manual even covers what to do if your Mac is stolen: retrieve a backup disk from your safe-deposit box and borrow a friend's Mac to generate police and insurance reports.

Name, Room, and Serial Number

To enter an item into the inventory, first select the appropriate category from a bank of icons: Auto, Jewelry, Art, Tools, Recordings, Electrical, Clothing, Furniture, or Miscellaneous. The program's 11 data entry fields allow detailed descriptions of each possession. Fields include Item, Make, Model, Serial Number, Quantity, Cost, Invoice, Date, and Comments. You can also specify the insurance carrier and the room the item is in. When you've finished entering the information, *Housekeeper* adds the item to the household inventory and lists it in a scrollable window (see "Add Infinite Items"). To edit or change an item, click on the item in the scroll window and it reappears in the data entry section. Once everything is listed, you may want to sort the list. You can sort alphabetically by clicking

the Item entry field, arrange items in chronological order by clicking Date, or sort by cost or room by clicking the appropriate field. The program also lets you sort by multiple categories, one at a time. For example, you could list all the art objects in your living room, in order from most to least expensive.

Charts and Reports

If your house should ever be burglarized, *Housekeeper* will help prepare police and insurance reports. When you print a report, information about each item is listed in the order you've specified, and the total cost of all the items on a page is listed at the bottom. The program lets you enter information for up to three insurance companies and generate forms for each company.

In addition to providing printed reports for insurance companies, you may want to use *Housekeeper* to produce charts for your personal use. Charts are a piece of cake with *Housekeeper*—or in some cases, a piece of pie. Charts come in two types: 3-D or pie. Both display the ratio of the value of your possessions in each category, and the 3-D charts provide a breakdown by insurance carrier as well. A pie chart can be a real eye-opener; I had no idea that I'd spent as much on computers and electronic gadgets as I had on my car until I saw the slices.

(continues on page 160)

The screenshot shows the 'Housekeeper' software interface. At the top is a menu bar with 'File', 'Edit', 'Chart', 'Report', and 'Options'. Below the menu bar is a data entry form with fields for 'Item', 'Printer', 'Model', 'ImageWriter II', 'Make', 'Apple', 'Serial', '0574644', 'Quantity', '1', 'Cost', '595', 'Invoice', '4459', 'Date', '04-27-86', 'Insurance', '1', 'Comments', and 'Room', 'Office'. There are buttons for 'Delete', 'Sort', 'Clear', 'Find', and 'Save'. Below the form is a scrollable list titled 'Carol's Electronics' containing the following items:

Item	Model	Make	Room
1 Computer	Ile	Apple	Office
1 Computer	Macintosh 512K	Apple	Office
1 Monitor	Composite Color	BMC	Office
1 TV	19-inch color	RCA	Living
1 VCR	Betamax	Sony	Living
1 Disk Drive	Disk II	Apple	Office
1 Modem	ProModem 1200	Prometheus	Office

At the bottom of the window is a row of icons representing various categories: a car, a house, a person, a tool, a record, a computer, a lightbulb, a question mark, and a house with a checkmark.

Add Infinite Items

Housekeeper records information about your possessions, providing a database of household items that can prove useful in tracking expenses or creating insurance reports.

MAC DRIVES DIRECT!

3 Reasons Why...

We are the Manufacturer.

By buying direct you avoid paying any retail dealer mark-ups. This is why our drives are so affordably priced. Warp Nine Engineering, a group

of dedicated engineers & technicians, develops products strictly for the Macintosh. You can be assured of receiving a high quality, reliable drive.

The Photon 20 External \$795

In stock and ready to ship, the **PHOTON 20** Meg external hard drive plugs right into your MacPlus SCSI port. Priced hundreds less than the "other guys" yet tough, fast and quiet. Call us toll free (1-800-328-6795, ext. 433) to get your own **PHOTON 20**.

Convenient Customer Service.

Our support personnel are ready to answer your questions. Simply call us (again toll-free) any time during the day. We are here to help for as long as you own our drive. Most drives are sent out within 48 hours via UPS.

If you prefer we will ship over-night delivery. Either way, a factory fresh drive will be delivered direct to your door.

The WARP 20 Internal \$895

Our **WARP 20** drive delivers portability and performance by mounting directly inside either a

512k or a MacPlus, no modifications are necessary. Hundreds of Mac owners—people just like you—have installed their own **WARP 20** hard drives. Our illustrated manual guides you through the installation. Tool kits are available on a loaner basis. Call us toll-free 1-800-328-6795, ext. 433 to order your **WARP 20**.

30 Days to Love It.

All Warp Nine drives come with a 30 day return privilege. Your satisfaction is the only judge. In addition, all our drives are covered by a 90 day

warranty. If your drive fails return it. We will send you out a brand new drive right away. Full 1 year warranties are also available.

The Phaser 800 \$239

Need more storage but 20 megabytes too much? Then we suggest our entry-level product—the **PHASER 800**. 800k of 3.5" storage packed into a nice compact cabinet that works fast & quiet and fits easily into your Mac carrying case.

Now that you know why to get your drive from Warp Nine... why wait? Call us today 1-800-328-6795, ext. 433.

3M
diskettes

Everything that goes into a 3M diskette is manufactured and/or controlled by specifications set by 3M.

From unique substrates and oxides, to hole punching and jacket fabrication, 3M does it all and does it well. With confidence in your complete satisfaction, 3M diskettes are certified to be error free and have an unlimited warranty against defects in workmanship or materials. Day in and day out 3M gives you one less thing to worry about.

What separates us from our competition? Simply a combination of the best service in the industry, highly competitive pricing, and an ever widening range of products. Above all we care about our reputation and we are willing to work on a lower margin while delivering what others only claim—and we do it all on a day-in day-out basis.

Early in 1986 every subscriber to **Mac World** will receive our New 1986 First Edition Catalog with 16 additional pages and dramatically lower pricing. We want to be your source for computer supplies & accessories.

Does It Make the Grade?

Overall, *Housekeeper* earns a grade of B+. The program does what it sets out to do, and it does it efficiently. Because the program is a simple, single-purpose database, it is easy to use. For the same reason, it lacks flexibility. For example, you can't add to or change the data entry fields. But there are enough fields so that, with a little ingenuity, you can describe just about anything you own. A few idiosyncracies in the user interface can prove annoying. For example, to save a newly created file you must choose Save As, rather than Save, from the File menu; choosing Save wipes out your data. I also noticed some sorting problems. A list of 30 or so items sorts just fine, but when I alphabetized the 152-item sample database, three items were inexplicably out of order. This is a minor bug, however, in an otherwise competent program. —Carol Johnson

Word of Mouse

If you're like many Macintosh owners, you occasionally attend user group meetings. There you can see programs demonstrated, ask fellow users questions, and hear the latest industry rumors. But if you have a pressing programming question or want to get hold of a public-domain desk accessory you saw at the last meeting, you may find yourself wishing that you could talk to members of the group at any time.

With some user groups, you can do just that. Many groups run a bulletin board system (BBS) that puts club news only a phone call away for any member who has a computer, a modem, and a communications program. You can leave private or public messages for other BBS users, read their messages, and trade public-domain programs by uploading and downloading them across the phone line. Best of all, these boards are usually operated by volunteers and cost only the price of a phone call for group members. Some bulletin boards are also operated by individual

The Magazine of Personal Computer Publishing

If you use a Macintosh or PC system to publish documents, reports, newsletters, books, brochures, ads, presentation graphics, or any other printed material, then you need **Publish!**, The Magazine of Personal Computer Publishing.

Act Now for Charter Subscriber Savings— 33% Off!

Personal computer publishing is the most significant development in producing printed material since Gutenberg invented movable type. Laser printers and other advanced peripherals and software have made it possible to create high-quality printed documents without the time-consuming expense of typesetting and pasteup.

Publish! is the first sophisticated magazine to be entirely written, edited, and produced on personal computer-based systems. By being on the cutting edge of this exciting new technology, **Publish!** is the one truly expert guide that you can depend on for all the information you need to set up and manage your own operation.

Each colorful, feature-filled issue is extraordinarily easy to read and understand. **Publish!** answers all your questions about using personal computers with laser printers, plotters, digitizers, word processors, page-makeup software, and even the latest personal computer-interface commercial typesetting systems. We cover stand-alone systems as well as completely networked editorial systems.

Publish! saves you money and time while giving you total control over your published material. In addition to showing you the shortcuts and tricks of the technology, **Publish!** teaches you about design and graphics as well as other publishing fundamentals.

In **Publish!** you get the benefit of unbiased, professional reviews, practical how-to articles, and the latest news of what's happening in this fast-moving area of computer publishing.

Best of all, **Publish!** can be yours at a surprisingly low price—if

you act now and become a Charter Subscriber! For a limited time, Charter Subscriptions are available for just \$19.95 for a full year (6 bimonthly issues). You save 33% off the basic subscription price others will pay when the Charter offer closes.

Take advantage of this limited-time Charter Subscriber offer now and get the full benefit of **Publish!**'s expertise as soon as possible. Mail the attached postpaid card or the coupon below. Or for faster service, call TOLL-FREE 800/222-2990.

Charter Subscription Savings

(continued from page 160)

users who are happy to have others converse with their computer and trade information.

Dreams of the Phoenix offers a program, **Mouse Exchange BBS**, that allows you to set up an on-line bulletin board. *Mouse Exchange* is generally easy to use, both for the people managing the BBS and for callers. Although the program will work on a single-drive, 128K Mac for those who want to operate a BBS just as a message center, user groups operating a BBS need a hard disk to hold a substantial selection of software. For more limited applications, such as a BBS operated by a software developer to distribute the newest version of a program and to receive comments from testers, a two-drive, 512K Mac would probably be adequate.

Setting Up a BBS

Mouse Exchange comes with a 30-page manual that explains the bookkeeping files you must create to run the pro-

gram. You use a text editor such as *MacWrite* to type in the information that people see when they log on. You also set up text files for keeping track of people's passwords and for listing the locations of various files. *Mouse Exchange* also allows you to specify an access level for each user; depending on the access number you assign, the caller will be granted or denied access to various parts of the board.

Mouse Exchange handles private mail messages from one BBS user to another, as well as messages posted to a public news section. The public section can be divided into as many as ten categories, so people with a specific interest won't have to read every message posted. You can make certain categories available only to people with a high enough access level, allowing, for example, communication among BBS operators about system-related topics that aren't of interest to most users.

Mouse Exchange also lets you upload and download files. The files section of the board, like news, can be categorized. As people upload files, the title of the file, the date and time uploaded, the file size, and a short description of the file are added to a file directory.

The BBS also includes a command for paging the system operator. When this command is selected, the Macintosh running the BBS beeps several times. The system operator, if present, can then select the Chat On menu option and type a message directly to the user. The system operator can select Chat On at almost any time, even if a user has not paged the operator.

Another helpful command prints a complete list of BBS users. Because *Mouse Exchange* keeps track of people by first and last names, no mail can be sent to someone whose name is misspelled. The command can be used to find the correct spelling of a name.

A Good Workhorse, but Give Us Graphics

Mouse Exchange is quite adequate for handling file transfers, mail, and information such as user group minutes and news, although the current version does not support a quick, easy type of file transfer

(continues on page 164)

**RECORD
HOLDER**
Data Manager for the Macintosh™

**WHY PAY
HUNDREDS
OF DOLLARS
FOR A
FILING
SYSTEM
...AND SETTLE
FOR
SECOND
BEST?**

Introducing **Record Holder™**, the *best* Data Manager **\$49.95** for the Mac, at a ridiculously low introductory price of

Record Holder is a full function data manager that allows you to store up to 32K of text and is so easy to use that you can get a report out in less than 5 minutes.

Easy To Learn

- Comprehensive manual includes a tutorial section.
- You never feel lost with over 100 HELP screens.

Easy To Use

- Need not define the length of your fields. All fields are variable in length.
- What you see is what you get. Designing both Screen and Report is as easy as clicking and dragging with the mouse.
- Make mailing labels in seconds.

Flexible

- Allows text fields of up to 32,000 characters.
- Allows Calculated or Computed fields.
- Allows Date, Numeric and Money formats.

Loaded With Features

- Unique Table of Contents Window allows global view of your database and instant access to any record.

- Powerful and flexible searching capabilities.
- Allows Totals, Averages and Count as well as Running Totals and Running Counts for Report generation.
- Up to 124 sort levels for Report generation.
- Allows unlimited number of Report Formats per file.
- Automatic SAVE feature to ensure data integrity.
- Compatible with the Macintosh 128K, 512K and the XL.

Macware Reviews

(continued from page 162)

called MacBinary. Instead, files must be stored as converted text files, to be decoded after downloading.

Novices will have little trouble understanding how to navigate around the system, since menu prompts are clear and a help screen is available. For the expert user, though, *Mouse Exchange* lacks a good full-screen editor. The editor supplied is a line editor, so it is best to prepare text using a program like *MacWrite* and then transfer the text to *Mouse Exchange* once it is completed. The program also lacks quick commands to get you from one function to another in a hurry. You have to return step by step to the main menu before changing sections.

The current version of *Mouse Exchange* does not make use of the Macintosh interface. It supports only a text display, much like bulletin boards for other computers. Apple II and IBM PC users can call a Macintosh that runs *Mouse Exchange* and feel right at home. *Mouse Exchange* doesn't allow you to use the mouse to issue commands to the bulletin board, nor can you send or receive graphics except as stored files to be opened off line.

Despite these minor drawbacks, *Mouse Exchange BBS* is well worth its price. If your user group is shopping for a bulletin board program, *Mouse Exchange* will provide an effective, inexpensive solution. —Linda Custer

Full-Page Outline

4paint lets you draw on an entire 8½- by 11-inch page. A sketch can be saved as a MacPaint document and touched up in MacPaint.

Paint-by-Menus

Quick, list four things *MacPaint* can't do. Although it's an excellent freehand drawing program, many people complain that *MacPaint* doesn't rotate objects in small increments, draw curved lines, or provide a visible, resizable grid. Perhaps the most common complaint is that the artist is restricted to drawing in *MacPaint*'s small window, and is therefore hampered when working on a full-page image. Just try drawing a circle that's larger than the *MacPaint* window, for example.

If you've voiced any of these complaints, you might find that Reas'nable Software's *4paint*, when used in conjunction with *MacPaint*, fills some gaps in the latter. *4paint*, an object-oriented drawing program that runs on a 128K Mac, allows you to create line drawings on a scaled-down representation of an 8½- by 11-inch page and then transfer the drawings to *MacPaint* to enhance them there (see "Full-Page Outline"). In short, *4paint* provides a full-page sketchpad in which to rough out large drawings. *4paint* has limitations of its own: it lacks an eraser, a paintbrush, patterns, and a text option. But a *4paint* drawing is intended to be a pencil sketch that can later be converted to a full-fledged drawing in *MacPaint*.

Movers and Shapers

4paint's Draw menu offers five drawing elements: a straight line, a curve, a rectangle, a rounded rectangle, and a circle. Shapes and lines can be drawn in line widths from 1 to 8 pixels, giving you more flexibility than *MacPaint*'s line-width fea-

A complete statistical package for only:

STATFAST™ \$119

A Powerful Tool for Data Analysis and Forecasting

- Very easy to use, even for novices. No commands to memorize
- Speed is a crucial issue in statistics: STATFAST is a professionally designed superfast stand-alone application (it completes in seconds what takes BASIC or Pascal program 20 minutes or more)
- Unlimited size of data files!
- Descriptive Statistics, t-tests (indep./dep. samples), Correlations, Crosstabulation, Frequency, 10 Nonparametric Statistics, Multi-factor Analysis of Variance/Covariance (up to 5 factors [including a covariate], Repeated Measures, Unbalanced Designs, Contrasts), Multiple Regression (up to 50 predictors, Durbin-Watson statistic, autocorrelation of residuals, forecasting sub-program, plots of residuals, and more), Significance Tests, and much more
- Double precision calculations
- User defined (multiple) conditional selection of sub-sets of cases, various ways of treating missing data
- Two flexible Data Editors (command- and screen-oriented), easy entering/editing, "copying", "pasting" of data, complex (conditional) transformations, sorting, and more
- Can also access files created by spreadsheets (e.g. Multiplan, Jazz), data bases, and from mainframes
- Graphics, clear comprehensive output, can be "pasted" into MacWrite or MacPaint documents
- Clear, comprehensive manual, with step by step examples
- Requires 128k or 512k Macintosh®, external disk drive or hard disk supported but not required

To order send check or money order for \$119 (plus \$5.00 shipping and handling) to:

I HATE MY GUTS.

Imagine what it would be like to live with painful stomach cramps and terrible diarrhea. Forever.

More than 2 million men, women and children do just that. They have Ileitis and Ulcerative Colitis, intestinal diseases that strike at any age, and often require hospitalization for weeks—even months.

Please help us in our fight to find a cure for these devastating and misunderstood diseases.

Because when you suffer from something that many people acknowledge with only snickers and whispers, it's easy to mistakenly begin hating yourself as much as you hate your disease.

The National Foundation for Ileitis & Colitis

Macware Reviews

(continued from page 164)

ture. Each element has three handles that let you move the element around on the screen, stretch or shrink it, or rotate it around a center point. Elements can be grouped, allowing you to move or rotate a conglomeration of elements as a single unit. Unlike *MacPaint*, which rotates selected objects 90 degrees at a time, *4paint* rotates single or grouped objects in increments of less than 1 degree. In addition, you can tilt an entire drawing at an angle simply by selecting a menu item and dragging the drawing.

In addition to drawing circles and ellipses, *4paint* draws curves and arcs. Selecting New Curve from the Draw menu gives you the raw material for a curved line: a U-shaped curve with four shaper handles. The shapers can be dragged in any direction to produce a variety of curves, including S-shaped curves.

Axes Mark the Spot

4paint's grid fills another of *MacPaint*'s holes. While *MacPaint* provides an invisible 8- by 8-pixel grid, *4paint* offers a multitude of grid options. You can specify increments that range from 1/8 inch to 24 inches for the x axis, the y axis, or both. The grid can be hidden or visible and can be turned on or off at any time. A Snap to Grid option causes line or shape elements to jump to the nearest grid intersection. If you scale or tilt a drawing, the grid scales or tilts accordingly.

4paint's manual is on the informal side (the Revert command, for example, is described as "a sort of super-undo for when things get really screwed up"), but it manages to adequately explain how the program's various features work. *4paint* is not as sophisticated as drafting programs like *MacDraw* or *MacDraft*, but if you need a flexible grid, curved lines, and the ability to work on a full-sized page, then \$39.95 is certainly a reasonable price to pay for enhancing *MacPaint*'s abilities.

Concerned about the damaging effects of excessive heat and power line disturbances?

MACBCOOL™

Not just another fan!

Cooling is essential for optimum Mac operation. MACBCOOL™ cools your Mac better. Its whisper quiet fan circulates more than 20 cubic feet of air per minute through your Mac utilizing all top vents. That's plenty of cooling... even if you pack your Mac with hard disks and tons of RAM!

Surge energy protection is a must for your Mac too! MACBCOOL™ offers premium quality surge suppression and line filtering as protection against power line disturbances which can cause permanent damage to sensitive computer components.

And, MACBCOOL™ gives you added convenience with its easy to reach, front mounted switches to power up your Mac and up to two peripherals.

To order, see your local dealer or call:

*PC Network Members pay just 8% above the wholesale price, plus shipping. All prices reflect a 3% cash discount. Minimum shipping \$2.50 per order. International orders call for shipping and handling charges. Money Orders, personal and company checks please allow 10 working days to clear. All prices subject to change without notice!

...WITH THESE 15 UNIQUE BENEFITS

1 COST + 8% PRICING—The NETWORK purchases millions of dollars in merchandise each month. You benefit in receiving the lowest price available and all at just 8% above published dealer wholesale price.

2 OUR 600 PAGE WHOLESALE CATALOG—Members receive our 600 page wholesale catalog containing over 30,000 hardware and software products for the IBM PC, APPLE and over 50 other popular computer systems. **THE NETWORK'S CATALOG IS THE LARGEST SINGLE COMPILATION OF PERSONAL COMPUTER PRODUCTS AVAILABLE TODAY. NOW UPDATED QUARTERLY!**

3 IN-STOCK INSURED FAST HOME DELIVERY—The NETWORK maintains a giant multi-million dollar inventory of most popular products, allowing us to ship many orders from stock. Non-stock items are typically maintained in local warehouses just days away from The NETWORK and YOU. We pay all insurance expenses on your shipment. **EMERGENCY OVERNIGHT SERVICE IS AVAILABLE ON REQUEST.**

4 10 DAY RETURN POLICY—If you are not satisfied, for any reason with any hardware component purchased from The NETWORK within 10 days of receipt, we will refund your entire purchase (less shipping) with no questions asked.

5 MEMBERSHIP SATISFACTION GUARANTEE—If for any reason you are not satisfied with your membership within 30 days, we will refund your dues IN FULL.

6 EXPERIENCED CONSULTANTS—The NETWORK hires consultants, not order takers, to aid you in product selection. Our consulting staff possesses in excess of 150 man years of personal computer product experience. **We back our consultants with our money back guarantee: IF ANY PRODUCT RECOMMENDED BY OUR CONSULTING STAFF FAILS TO PERFORM AS PROMISED—WE WILL TAKE IT BACK AT OUR EXPENSE FOR A 100% REFUND.**

7 FREE TECHNICAL SUPPORT—The NETWORK supports every product it sells. Our qualified TECH-SUPPORT staff will help you assemble your system, interpret vendor documentation and get your software and hardware to work. **WE WILL GIVE YOU ALL THE HELP YOU NEED, WHEN YOU NEED IT—FREE!**

8 OPTIONAL BUSINESS RENTAL LIBRARY—All members can join our BUSINESS RENTAL LIBRARY featuring over 1000 available titles for just \$25 PER YEAR above the base membership fee. This entitles you to rent business software AT JUST 20% of the DISCOUNT PRICE FOR A 14 DAY PERIOD. If you decide to keep the software, the entire rental fee is deducted from the purchase price. **VIP MEMBERS GET A FULL 30 DAYS for just \$30 above the V.I.P. base fee. This also includes the game library privileges for a \$5 combination savings.**

9 OPTIONAL GAME SOFTWARE RENTAL LIBRARY—The Game Rental library is available to members for just \$10 PER YEAR and permits evaluation (or just enjoyment) of any game or educational software product as above.

10 SPECIAL SAVINGS BULLETINS—THE PRINTOUT—Issued Quarterly at no charge to Network members only! The Printout contains all the New Product listings and price changes you need to keep your Catalog up to date. Also, we buy excess dealer inventories, and store bankruptcy closeouts, which we turn around and make available to our members at fantastic savings via THE PRINTOUT.

11 DISCOUNT BOOK LIBRARY—Working with numerous publishers and distributors, The NETWORK has assembled a library of over 1000 computer related books and manuals at savings of up to 75% from the normal store price.

12 MEMBERSHIP REFERRAL BONUS—Our most valuable source of new members is you! To date almost 40% of our members have been referred by word of mouth from other satisfied members. For those of you who refer new members, The NETWORK will credit a cash bonus to your account applicable to any future purchase.

13 CORPORATE ACCOUNT PROGRAM—Almost 50% of The NETWORK's members are corporate buyers and users (see opposite page left). The NETWORK can establish open account status and assign designated account managers to expedite orders, and coordinate multiple location shipments.

14 QUANTITY DISCOUNTS—For large corporations, clubs, and repeat or quantity buyers The NETWORK can extend additional single order discounts, when available to us from our manufacturers and distributors.

15 PRICE PROTECTION—The PC Industry is crazy!! Prices change not yearly or monthly or even weekly but often day by day! These changes are sometimes up but are mostly down!!! **THE NETWORK GUARANTEES THAT IN THE EVENT OF A PRODUCT PRICE REDUCTION, BETWEEN THE TIME YOU PLACE YOUR ORDER AND THE TIME THE PRODUCT SHIPS YOU WILL ONLY PAY THE LOWER AMOUNT!!**

5 good reasons to attend the MACWORLD Expo® —

The Original Macintosh™-Exclusive Computer Show

- 1. See and touch the latest Macintosh products.** Visit hundreds of exhibits and see the newest hardware, software and peripherals available for the Macintosh.
- 2. Save time and money.** Attend the Macworld Expo in the city that's convenient for you — Boston, Dallas or San Francisco.
- 3. Pick from dozens of tutorial sessions.** No matter where you use your Macintosh — in the office, at school or at home, you'll be able to choose the session that's best for you.
- 4. Pinpoint new areas for increasing your profits.** If you develop, produce or sell Macintosh products, the Industry Sessions are your opportunity to hear the latest on industry trends.
- 5. Apply your expertise right on the spot.** Use one of the many Macintoshes available to test and fine-tune your skills.

This is the original Macintosh-exclusive computer show bringing you a world of Macintosh knowledge not available anywhere else!

Sponsored by MACWORLD, the Macintosh™ Magazine.

Mark these dates on your calendar:

Boston

August 14-16, 1986
Bayside Expo

Dallas

October 16-18, 1986
Market Hall

And, returning to Brooks Hall in San Francisco — January 15-17, 1987!

For further information on the upcoming Macworld Expos, just fill in the coupon below and return it to us. Or call us at 617-329-7466.

Macworld Expo is a registered trademark of World Expo Co. Macintosh is a trademark licensed to Apple Computer, Inc.

Macworld Directory

The Macworld Directory is a comprehensive listing, by category, of products and services available for the Apple Macintosh. It provides advertisers with a low-cost advertising alternative and our readers with an easy reference guide.

FORMAT: The standard format includes a product ID, a 300-character descriptive ad, and a company name, address, and telephone number.

Advertisers may choose among categories already in use, or they may create their own. Display advertisers can cross-reference their current ad to the Macworld Directory for increased exposure.

RATES: Listings are accepted for a three-time consecutive insertion at a rate of \$726. We offer a six-time insertion at \$1230 that reflects a 15% frequency discount. Listings must be prepaid (except for established display advertisers) upon submission of ad copy. Checks, money orders, Visa, and MasterCard are accepted.

DEADLINE: For copy deadlines and further information please contact Niki Stranz, your Macworld Directory Account Manager, at 415/861-3861 or 800/872-7800 (800/872-7808 in California). Please send copy and prepayment to the Macworld Directory, 555 De Haro St., San Francisco, CA 94107.

■ Accessories

○ Index

Quarterly Macworld Index

Now you can find any article, column, or product review that runs in Macworld. A complete quarterly index ends searching thru back issues for the info you need on Mac products, applications, software. Our index covers every Macworld ever published. Makes Macworld a Mac Library. Free Mouse Pad

Try one free sample of EZ Mouse™ die-cut, self-adhesive, antifriction pad on the bottom of your mouse.
● Dramatically improves the feel on any surface.
● Eliminates wear on the bottom pins.
● Keeps mouse cleaner.
● Reduces wear on desk surface, too. For free sample and details, write or call:

Hi-Tech Products, 8331 Artesia Blvd., Buena Park, CA 90621
714/670-2150

○ Switches

Mac A/B Switch

Switch conveniently between your letter-quality and Imagewriter printers with only a flip of a switch. Occupies only one port and provides instant access to either printer. Compatible with all LQ printers. Complete with one cable \$99
Add'l cable for LQ printer (Std.) \$25
Add'l cable for LQ printer (API) \$39
Visa/MC welcome. See display ad in this issue.
Creighton Development, Inc., 714/472-0488

■ Artificial Intelligence

○ Expert System Tools

ExperOPS5: The Expert Maker™

Develop your own expert system with Exper-OPS5. Developed by Carnegie-Mellon University and implemented for Expertelligence by SAIC, the program uses Macintosh-style menus and editing features. OPS5 has been widely used by major cor-

porations for applications ranging from computer configurations to stock market analysis.

Expertelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

ExperFacts™

A flexible expert systems-building tool. Written in ExpertLisp by MC-Systems™, ExperFacts features backward and forward chaining, meta-level control, partitioning of the knowledge base, and a software hook that runs any LISP function, including graphics!
Expertelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

○ Languages

ExperLogo

The ideal tool to experience AI concepts & transform your Mac into a fantastic image generator! 3-D & spheric coordinates; automatic conversion; Mac toolbox; control of menus, windows, etc. Because ExperLogo is compiled, it is fast & powerful. Used by professionals for 3-D animation & development of small expert systems. More than 5000 users! A new technology that you cannot afford to ignore. Call or write today. Visa/MC. Corporate, user groups, & education welcome.
Expertelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

ExperLogo-Talker/Prologo

A special implementation of ExperLogo that brings speech to your programs. Control pitch and speed; create incredible effects! On the

same disk an interpreter version of Prolog, the newest AI language. Implemented in ExperLogo. Includes source codes & numerous examples. A serious & fun professional product. Updates from ExperLogo avail. Call or write today. Visa/MC. Corporate, user groups, & education welcome. *ExperTelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871*

ExperLisp: The AI Master
LISP is the most widely used AI language. It has been used to develop hundreds of expert systems all over the world. ExperLisp is the first compiled version available on the Mac. Includes all the Mac-style menus and editing features. Package includes *A Gentle Introduction to Symbolic Computation*, written by David S. Touretzky of Carnegie-Mellon University. A must for anybody interested in AI, from beginners to developers! Call or write today!
ExperTelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

ExperLisp-Talker
Create state-of-the-art talking expert systems: allows the integration of real-time text with speech synthesis in ExperLisp programs. Control speed, pitch, & rate. Includes sources for a talking version of the famous *Animal* program, detailed documentation, and examples. Call or write today. Visa/MC. Corporate, user groups, & education welcome.
ExperTelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

○ **Utilities**
ExperLisp-3600
A unique version of ExperLisp designed to optimally integrate ExperLisp with a Symbolics. A special feature, ExperLink™, supports remote procedure invocation and file transfer, plus the creation of a Mac-based Symbolics Listener window. The window allows programs from the ExperLisp editor to be remotely compiled on the Symbolics.
ExperTelligence, Inc., 559 San Ysidro Rd., Santa Barbara, CA 93108, 805/969-7871

■ **Business Opportunities**
Looking for a Publisher
for your Mac application? CSI, the publisher of many microcomputer software products would like to talk with you about publishing your innovative product ideas. Complete publishing services—documentation thru distribution. In-depth technical knowledge of the Mac. Flexible royalty %'s.
Creative Solutions, Inc., 4701 Randolph Rd. #12, Rockville, MD 20852, 301/984-0262

■ **Expert Systems**
MacKIT™ Version 2.0
The Knowledge Integration Toolkit for Building Expert Systems. This shell is written in FORTH as a turn-key application... FORTH not required. *MacKIT* features a production rule compiler, back-chaining inference engine, certainty factors. Not copy protected. 512K req. \$149, demo disk \$10. MC/Visa.
Knowledge System Environments Inc., P.O. Box 261, Dept. M3, Grantham, PA 17027, 717/766-4496

■ **Hardware**
○ **Bar Code**
Bar Code/MagCard Readers
The PC-380 Bar Code & PC-580 Magnetic Stripe (credit card) Readers have been designed to interface with the Apple Macintosh, are easily connected between the keyboard and the CPU, and require neither additional software nor an RS-232 port. A powerful but simple program for printing Code 39 bar codes is also available.
TPS Electronics, 4047 Transport St., Palo Alto, CA 94303, 415/856-6833

○ **Data Acquisition**
"Real World" Access
Add measurement and control capabilities to your Mac with the ADC-1. This easy-to-use RS-232 peripheral includes 16 analog inputs (13 bit), 4 digital inputs, 6 outputs, and a BSR controller. Used for laboratory, industrial, and home monitoring. \$449. ADControl software \$45. Sensors available.
Remote Measurement Systems, 2633 Eastlake Ave. E/206, Seattle, WA 98102, 206/328-2255

○ **Monitors**
MacMonitor \$1295
23-inch hi-res monochrome monitor with antiglare makes viewing your Mac easy in classrooms, trade shows, seminars, offices. Horizontal scan rate is switch selectable: 15-25 kHz. Guess what else? MacMonitor works with Apple IIe, IBM PC, Amiga, etc. MacMonitor does it all. Ask about our Mac Projectors for \$3995.
National Data Systems, 2419 Rutland Dr., Austin, TX 78758, 512/837-1760, 800/531-5143 (U.S.), 800/252-8286 (TX)

○ **Video Adapters**
Mentauris Corp.
Specialists in Macintosh video interfacing for over two years. Mentauris offers a wide range of products to satisfy any Mac or Mac Plus video interfacing need: our original, high-res Composite Video Adapter; our new, "no-drill" CVA; monochrome and color NTSC scan converters; Mac disassembly hand tools.
Mentauris Corp., 1658 IH 35 S, P.O. Box 1467, San Marcos, TX 78666, 512/396-1565

■ **Insurance**
Safeware
If your computer is important to you, insure it! SAFEWARE provides full replacement of hardware, media, & purchased software. As little as \$39 a year covers fire, theft, power surges, earthquake, water damage, auto accident. Call 8 a.m. to 8 p.m. Mon. thru Fri.; Sat. 9 a.m. to 5 p.m.
Safeware, The Insurance Agency Inc., 2929 N. High St., P.O. Box 02211, Columbus, OH 43202, 800/848-3469 (Nat'l), 614/262-0559 (OH)

■ **Publications**
Microcomputer Books
Selected Macintosh titles include:
● *Basic Microsoft Basic* \$16.95
● *Mac Revealed, Unlocking the Toolbox* \$22.95
● *Microsoft Macinations* \$18.95
● *Excel in Business* \$20.95
● *The MacPascal Book* \$14.95
● *Using the Macintosh Toolbox with C* \$20.95

● *Jazz!* \$14.95
S/h extra. MC/Visa/AE. Send for free Directory.
Micro Books, P.O. Box 4068, West Richland, WA 99352, 800/547-9755 ext. 8, 509/967-5084

Mac Artists
Do you miss *Macworld Gallery*? Do you have patterns or drawing tips to share? Send a B&W paper copy of your masterpiece (up to 8 by 10½ inches) with a description of how it was done & \$20. Each entry will receive a copy of *Mac Artist* with his or her work in it! Nice prizes awarded to top entries. For a copy send \$5.
Mac Artist, 12 Calvin Ct., Walnut Creek, CA 94595, 415/935-2270

Mac Tricks
Only \$14.95 postpaid, a handbook of hundreds of helpful tips to make your Mac more useful, fast, and fun. If you read ALL of the magazines, you've seen many, if you could only remember where?! Full table of contents and index, information arranged by application. Probably the best \$15 you'll ever spend on your Mac. MC/Visa accepted.
Digi-Graphics, 764 E. Village Way, Kaysville, UT 84037, 801/544-2009

■ **Services**
○ **Data Conversion**
Electronic Data Conversion
Conveniently translate data files from dedicated word processors, phototypesetters, PC software (word processing, databases, spreadsheets including formulas) to your Macintosh or other system. Experience compatibility. Call or write, then send a sample disk or tape for a complimentary translation.
CompuData Translators, Inc., 6565 Sunset Blvd. #301, Hollywood, CA 90028, 213/462-6222

○ **Disk Duplication**
● **Duplication**
100% error free. Clean room environment. Quick turnaround.
● The Media—guaranteed for a lifetime. 8", 5¼", 3½" avail.
● Full Service—copy protection & serialization. Complete packaging & assembly. Int'l distribution. Dependable, personalized service.
Computer Media Products, 4760 Murphy Canyon Rd., San Diego, CA 92123, call collect 619/565-7802

○ Graphics/Printing

Save \$\$

Cut your printing and typesetting budget up to 80%! Mac and IBM disk or modem output on LaserWriter or professional-quality Linotype (1270 dots per inch). We specialize in newsletters, custom layout of your advertisements, logos, and business forms. Complete offset printing and bindery services available.

Laser Printing Services, 26058 W. 12 Mile Rd., Southfield, MI 48034, 313/356-1004

Laser Typesetting

Use your Mac for desktop publishing! Newsletters, brochures, and other graphics output at professional quality using your Mac and our Linotype™ typesetter or Apple LaserWriter. Great savings and 24-hour turnaround via disk or modem. Graphic design also available from our staff artists. Write or call: *Spectrum Arts, Ltd., 1823 Eutaw Pl., Baltimore, MD 21217, 301/225-7372*

○ Typesetting

MacTypeNet

Professional typesetting services for the Macintosh. Text and/or graphics output at 300 to 2540 lines per inch resolution from Apple LaserWriter™ or Allied Linotype™ L300 laser typesetter. Disk and modem service. 24-hour turnaround. Full printing and bindery services. Write or call for user info.

MacTypeNet™, Box 52188, Livonia, MI 48152-0188, 313/477-2733

■ Software

○ Accounting

Shopkeeper

For retailers and service firms. Integrated Accounts Receivable, Billing, Inventory, Point of Sale, & Invoicing program. Use all or any parts. (880 customers, no limit inventory.) Written just for the Macintosh. Works with any general ledger system. For the 512K Macintosh with external or hard disk drive. \$79.95.

Woodtec, 320 W. Maple, P.O. Box 445, Arkansas City, KS 67005, 316/442-7000

○ Apple Emulator

II in a Mac™

NOW!... Run Apple II™ software on your MAC, without hardware! *II in a Mac* simulates a 64K Apple II+ with 80-col full screen, including monitor and soft switch locations. *II in a Mac* comes COMPLETE with DOS 3.3, ProDOS, Integer/Applesoft BASIC, an Apple II transfer disk, and features like HiRes/LoRes graphics, Joystick and Desk Acc./SWITCHER support! Available NOW... \$69.95. *COMPUTER:applications, Inc., 12813 Lindley Dr., Raleigh, NC 27614, 919/846-1411*

Mac + II

Mac + II is an ideal software package to run Apple II programs on the Macintosh. Mac + II emulates the Apple II (+, e, enhanced, 128K, 80 column) and runs AppleWorks and thousands of DOS 3.3, ProDOS, BASIC, and Apple II machine language programs. Easy transfer software is included. The best Apple II emulator on the market. \$149.95. MC/Visa. *Meacom, P.O. Box 272591, Houston, TX 77277, 713/526-5706*

○ Architecture

MacPerspective™

Allows architects, draftspeople, and artists to rapidly construct perspective drawings of houses, buildings, or other objects. Viewpoint can easily be changed. Drawings can be printed in any size up to 100 inches. Easy to learn and use. Fast, professional program with many features, thorough manual. \$149.

B. Knick Drafting, 313 Marlin Pl., Melbourne Beach, FL 32951, 305/727-8071

○ Backup Restore

COPY II MAC

COPY II MAC backs up nearly all protected software easily! Allows running some directly from your hard disk—so put that original 3½" safely away. Repairs damaged disks and undeletes files too! For 128-512K Mac, 1-2 drives. \$39.95 + \$3 s/h (\$8 overseas). MC/Visa/chk./c.o.d. (We also have backup programs for IBM, Apple, Comm 64/128!) *Central Point Software, Inc., 9700 S.W. Capitol Hwy. #100, Portland, OR 97219, 503/244-5728*

○ Business

ZipFinder

Analyzes your mailing list files created with virtually any database program and automatically inserts the correct zip codes into the zip code fields. Also verifies existing zip codes on file and finds zips according to addresses entered by operator. Sold by state or partial state. *Softidea, 8177 S. Harvard #619, Tulsa, OK 74137, 918/745-9792*

MacAID Project +

This new product from CSSi uses *MacProject* output to enhance project monitoring and control for managers. Features include expanded reporting; actual vs. plan review; resource smoothing; flexible, easy input of "actual" project information. \$99.95 (IL + 6%). Visa/MC. Inquiries invited.

Common Sense Software, Inc., 12 Whitehall Ct., Buffalo Grove, IL 60089, 312/541-5200

○ Business Forms

MacForms™ & DrawForms™

Business forms on disk. Invoices, purchase orders, statements, etc.

- Personalized with your logo
- Customized to satisfy your needs
- Fill out on Mac or by hand
- Print out and/or use copier
- Save on disk

MacForms for *MacPaint*: 4-disk set w/ 100+ financial, purchasing, inventory, personnel, time, & sales forms \$79.95. *DrawForms* for *MacDraw*: 40+ popular forms providing easier data entry & editing capabilities. \$59.

Datafood Software Co., 400 Country Dr., Ste. H, Dover, DE 19901, 302/736-9098

○ Compilers

MacLanguages Series Pascal

A complete native code Pascal compiler and development system for the Macintosh. Provides full access to all ROM routines and other Apple software like *MacinTalk* and *Three D Quickdraw*. Creates stand-alone double-clickable applications and desk accessories, and it's compatible with Apple's MDS. \$99.95 + 5 s/h. *TML Systems, P.O. Box 361626, Melbourne, FL 32936, 305/242-1873*

DeSmet C Compiler

Full K & R native code C compiler, 68000 assembler, object file linker and librarian, machine level debugger, editor (See™), RAM disk emu-

lator. SANE (IEEE) floating-point support, program development shell, 120+ standard library routines, and 450+ ROM library interfaces. \$150. *C Ware, 505 W. Olive #767, Sunnyvale, CA 94086, 408/720-9696*

○ Data Management

DATAFAST

A powerful yet SUPER-EASY-to-use professional database management program. Create mailing lists, directories of customers, inventories, etc. Use predefined formats or create your own. Easy entering, sorting, and updating of data. "Copy" and "Paste" records into your *MacWrite* documents. \$49. Req. 128K, 1dd. *Statsoft, 2832 E. 10th St. #4, Tulsa, OK 74104, 918/583-4149*

○ Educational

Test Generation/Grade Book

MICROTEST II—Create, update, generate, & store exam materials. Easy question entry, large database; print multiple versions. *MICROGRADE*—Research-based, includes most-wanted features! Flexible course & grading structure, complete statistical pkg.; create variety of reports. Free brochures, demo pkgs. \$5 each. *Chariot Software Group, 3659 India St. #MD-1, San Diego, CA 92103, 619/298-0202*

Religious & Graphics Series

Scripture Bits (Bible calendar) \$22*
MacConcord (N.T. concordance) \$42.95
MacScripture (Old & N.T.) \$140
Religious Art Portfolio \$24.95*
Electro Bits (circuit graphics) \$24.95*
Orlando a la Carte! (dining) \$19.95*

MacMundo (newsletter disk in Spanish) \$8

*English or Spanish
Medina Software, Inc., 2008 Las Palmas Circle, Orlando, FL 32822, 305/281-1557

○ Engineering

Digital Logic Design Aid

LogiWorks is an interactive digital logic drawing and simulation package for the Macintosh. Features:
● built-in library of common gates, flip-flops, etc.
● user-defined devices, PROMs and PLAS
● adjustable device delays

- 3-state and open-collector devices
 - produces timing diagram of selected signals
 - \$159.95 (U.S.)
 - 128K version (no user-defined devices) \$79.95 (U.S.)
- Capilano Computing, 548 Beatty St., Vancouver, B.C. V6B 2L3 Canada, 604/669-6343*

BEAMAC II for CEs MES

Analysis & design programs. Any # of nodes, elements, loads. Structure, load, tension, shear, moment & deflected shape diagrams, in & out text, section table, more. Full Mac interface. FRAME-MAC (2-D frames) \$495; BEAMAC II (continuous beams) \$295; BEAMAC (simple beams) \$95. \$-back guarantee. Free support. *Erez Anzel, 5800 Arlington Ave. #5T, Riverdale, NY 10471, 212/884-5798*

Tolculator

Automates Geometric Tolerancing Design and Inspection. Positional fit & other formulas; picks drill, c'bore, etc.; math (trig., least squares, etc.); tolerance circuits; probability studies. Auto in process sampling & coordinate measuring mach. output analysis; metric conv., & much more. Req. *Microsoft Excel*. No computereze. Not protected. \$125. *Samuel J. Levy Engineering, 2943 Cortina Dr., San Jose, CA 95132, 408/251-7058*

CAE Schematic Capture

Why pay more? *McNET* has it all! Full-function schematic capture package. Build component library, enter schematic, and generate NET LIST. User-friendly and fast. Best CAE software on Mac. *Argus Software, Musgrove Building, 2 Elm Square, Andover, MA 01810, 617/475-8952*

○ Fonts

Indiawrite Fonts

Fonts for writing Hindi, Bengali, Tamil, Sinhala, Gujarati, Punjabi each \$99; Sanskrit \$149. Diacritic alone \$29. Several fonts in several sizes, plus roman with diacritic with each. All conjuncts available. Tested by Paris University. Specify U.S. or U.K. keyboard. Checks only. *Indiawrite, 735 W. 183rd St. #2A, New York, NY 10033 or 24 rue Macarez, Valenciennes 59300 France*

○ Fonts

Downloadable Laser Fonts

Specialized fonts for the LaserWriter. Classical Greek (SMK™ or WSU format) \$85. Serif/sans-serif for scientific texts \$75. Font of 100 chemical structures \$125 (with scientific text fonts \$160). Polish serif or sans-serif \$85 each (4 styles). Soon: small caps and modern Greek. MC/Visa. *Allotype Typographics, 1600 Packard Rd. #5, Ann Arbor, MI 48104*

○ Games

Dungeon Masters

Gamemaster #1 provides four utilities for the FRP game master. Save hours on repetitive tasks with NPC Generator, Experience Point & Attack Priority Calculators, and Multiple Random Roller. Requires MBASIC 2.0 or later. \$25 includes s/h. Check or money order to: *Hack & Slash Software, 1525E S. Broadway, P.O. Box 6066, Santa Maria, CA 93456*

MacGolf™

The ultimate graphic golf simulation game. So much like real golf you'll be amazed. Digitized golfing figure, real-life digitized sounds. Two unique 18-hole courses. View trees, sand traps, fairways, lakes, and flags in true perspective. Check wind speed, choose from 14 clubs, set your stance for hook or slice, and swing. Only \$59.95 + s/h. 100% satisfaction guar. 512K req. *Practical Computer Applications, Inc., 1305 Jefferson Hwy., Champlin, MN 55316, 612/427-4789*

Fame and Fortune

Tarot for the Mac—full Mac interface, graphics, and ease of use make this a great update of an ancient art. \$35 includes shipping. Check or money order. *Hack & Slash Software, 1525E S. Broadway, P.O. Box 6066, Santa Maria, CA 93456*

○ Graphics

Mac-Art Library

Mac-Art Library is 11 full disks of professional quality *MacPaint* art files. At \$29.95/disk, choose from *Animals, Plants, Transportation, Sports, The Farm, Tools, The Kitchen, Buildings, Signs/Symbols, Greeting Card Art, Geography*. Or get all for \$200. Also available: a Library Sampler for \$39.95. *CompuCRAFT, P.O. Box 3155, Englewood, CO 80155, 303/850-7472*

Magic Slate—Version 2.0

A dynamic graphics program that brings to the Mac environment an exciting art medium stimulating untapped artistic talent. Slate provides features typically found in expensive systems. Since you have a state-of-the-art computer, it makes sense to support it with similar software that opens the door to a fulfilling new personal experience. *Devionics, P.O. Box 2126, Covina, CA 91722, 714/779-7193*

EZ-Draft™ CAD Software

Now you can have mainframe CAD power at a fraction of the usual cost! *EZ-Draft* is a full-feature professional drafting system for the Macintosh™ Plus. Ideal for the casual user. Lets the expert outdraw any other PC drafting system available. Perfect for any kind of drawing. A surefire way to boost profits. *Bridgeport Machines, P.O. Box 32, Bridgeport, CT 06606, 800/242-2404*

Sizer/Adjacency

MacDraw D/As add power: size any object by typing in dimensions, accurate to 0.0001. Force objects together on near sides. Cut & paste values for easy dimensioning. Send disk with *MacDraw* & 84K free space. \$69.95 (MA \$73.43). MC/Visa. *MFE Associates, P.O. Box 851, Amherst, MA 01002, 413/549-7626*

○ Languages

NEON™

An object-oriented programming language, *NEON™* offers a Smalltalk-like environment implemented as an efficient threaded language to provide new power, flexibility and speed for developing for the Mac—on the Mac. \$195 + \$5 s/h. *Neon™ Assembler \$50 + \$5 s/h.* *Kriya Systems, Inc., 6 Export Dr., Sterling, VA 22170 1-800-34-KRIYA or 703/430-8800*

Multitasking for the Mac

Mach1™ is Forth-83 with:

- True multitasking
- Twice the speed of other FORTHS
- Hi-level access to Toolbox, floating-point, & speech routines
- A standard MC68000 assembler
- Normal text source files

- Turnkey applications
 - \$49.95 Visa/MC
 - No licensing fees
- The Palo Alto Shipping Company, P.O. Box 7430, Menlo Park, CA 94026, 415/854-7994, 800/443-6784*

MacScheme™—A Mac LISP

A LISP environment that makes a 512K Mac feel like a LISP machine. *MacScheme™* features a fast, reliable byte code interpreter with debugger, trace facility, and helpful error reporting. Its Smalltalk-like interface offers multiple windows and an editor that understands LISP syntax. \$125. *Semantic Microsystems, 4470 S.W. Hall St. #340, Beaverton, OR 97005, 503/643-4539*

Pascal Extender/C Extender

Compiled libraries of high-level routines let you quickly & easily create windows, menus, scroll bars, & dialogs & support many other features of Mac interface. Flexible & modifiable. 200-pg. manual & demos. *MacPascal 2.0 or TML Pascal compiler versions \$69.95. Megamax C or Aztec C version \$129.95.* *Invention Software Corporation, P.O. Box 3168, Ann Arbor, MI 48106, 313/996-8108*

MacScheme™—A Mac Lisp

A LISP environment that makes a Mac feel like a LISP machine. *MacScheme™* features a fast, reliable byte code interpreter, debugger, trace facility, and QuickDraw graphics. Its Smalltalk-like interface offers multiple windows and an editor that understands LISP syntax. Supports HFS, 512K or more RAM. \$125. *Semantic Microsystems, 4470 S.W. Hall St. #340, Beaverton, OR 97005, 503/643-4539*

○ Marketing

macINTERVIEW

macINTERVIEW is a variable market or opinion survey program to quickly analyze all kinds of inquiries. *macINTERVIEW* presents the results in tabular form as bar, column, or polarity charts on the screen or in print. *macINTERVIEW* enables the user to edit, enter, classify, concentrate, cross-tabulate, and compare data. Macintosh 512K. \$950 for English version. *Erich Breitschwerdt + Partner, Paulsmuehlenstr. 41, 4000 Dusseldorf 13, West Germany*

○ Medical

Medical & Dental Mgmt.

Solo or multipractitioner office includes patient (responsible party) billing, recall, paper/electronic claims, aging, collection, SuperBill, labels, diagnostic history, Word/Mac-Write, audit & productivity reports. 24-hr. support. 512 + hard disk or XL. Mac Office. Demo from \$100. AMEX/MC/Visa. 2400+ dealers. *CMA Micro Computer, 55722 Santa Fe Trail, Yucca Valley, CA 92284, 619/365-9718*

○ Music

StudioMac Music Kit

No experience required! StudioMac™ comes complete with Casio CZ-101 keyboard synthesizer, MIDI adapter, and easy-to-use software. Play new creations or MusicWorks pieces through the synthesizer. Great family entertainment. Synthesizer Kit \$595, MIDI Kit \$214, software only \$125.

Creative Solutions, Inc., 4701 Randolph Rd. #12, Rockville, MD 20852, 301/984-0262

○ Printer Drivers

The Print-Link™

A printer driver program, complete with cable, allowing choice of dot matrix, daisy wheel, and ink jet printers for the Macintosh. Mfrs. supported are Epson, Okidata, Panasonic, Citizen, Olympia, Brother, Juki, Dynex, C. Itoh, Diablo, Siemens, and still adding. \$84.95. *GDT Software Inc., P.O. Box 1865, Point Roberts, WA 98281-1865, 604/291-9121 or 800/663-MACC*

○ Public Domain

Mac Public Domain

Mac Public Domain Software—Hundreds available, \$10 per disk. Choose from applications, Multiplan templates, games, art, utilities, backup programs, disk editors, music, templates for business, desk accessories. Carefully organized with documentation. Send \$1 for a catalog. *Educomp, 2431 Oxford St., Cardiff, CA 92007, 619/942-3838*

Public-Domain Disks \$9

Have access to 1000 public-domain programs by mail! Members pay \$9 per disk plus \$1 postage & handling. Send \$20 for 1-year subscription. Includes intro disk with ten neat programs, plus listing of all disks in

library, plus quarterly newsletter describing latest public-domain software.

PD Mac, Dept. M, P.O. Box 5626, Sherman Oaks, CA 91423

MC/Visa. *Clear Lake Research, 5353 Dora St. #7, Houston, TX 77005, 800/835-2246 ext. 199, 800/362-2421 ext. 199 in Kansas*

○ Spec Writing

MacSpec

A professional's word processor for writing specs, proposals, and technical papers. With automatic:

- Section numbering
- Indentation
- Table of contents
- New table of contents and numbers when paragraphs are changed
- All you worry about is input of text. Compatible with existing word processors. \$199.95.

LM Software, P.O. Box 93, Belmont, CA 94002, 415/594-0627

○ Security

Advanced Copy Protection

The leading software manufacturers depend on Softguard copy protection. Introducing the *MACLOK Kit™*, a complete copy protection system that runs on the Macintosh.

- Stops all copybusters
- FULL HARD DISK support
- No source code changes
- Compatible with all Macintosh systems.

Free demo disk.

Softguard Systems, Inc., 2840 San Tomas Expwy. #201, Santa Clara, CA 95051, 408/970-9240

○ Spelling Checker

Spellswell™

A better spelling fixer for Mac-Write™, Word™ and text documents.

- Catches mistakes the others don't, like "insufficient funds"

- Checks homophones, e.g., there/their
- Handles hyphens/abbreviations
- Maintains capitalization
- Add/remove words from dictionary
- Separate document dictionaries
- \$49.95

Greene, Johnson, Inc., 15 Via Chualar, Monterey, CA 93940, 408/375-2828

○ Statistics

Number Cruncher Stat Sys

Integrated, menu-driven, Mac statistical system including: Multiple and stepwise regression, t-tests, correlation, scatter plots, up to 4-way ANOVA, principal components, cross tabulation, transformation, non-parametrics and much more. Complete Mac interface. Transfer data to/from clipboard. \$79. Requires 2dd. *NCSS-Mac, 865 E. 400 N., Kaysville, UT 84037, 801/546-0445*

STATEFAST

Professional but easy-to-use, SUPER-FAST statistical package. Unlimited size of data files. Incl. two flexible data editors (can access Multiplan & other files), descriptive stats, t-tests, correlations, cross-tabulation, non-parametric stats, general multifactor ANOVA/ANCOVA, multiple regression, charts, plots, and more. \$119. Req. 128K, 1dd.

Statsoft, 2832 E. Tenth St. #4, Tulsa, OK 74104, 918/583-4149

○ Tax

Professional Tax Planner

Multiplan or *Excel* users, plan indiv. or corporate strategy, incl. current & prop. tax law changes, easy spreadsheet commands. Compute deprec. & ITC, compare side by side, project ten yr. +. Fully adjust. EZTax-PLAN PRO \$295 + \$3 s/h. Specify your spreadsheet & machine. MC/Visa. Individual pkg. also avail. Free info. *EZWare Corporation, Dept. 5, P.O. Box 620, Bala Cynwyd, PA 19004, 800/543-1040, 215/667-4064 in PA*

GRIDS™ Tools for MacPaint

Know where the window is! 2 disks of utility templates for MacPaint for producing professional-looking drawings and charts. A collection of various grids, scales, rulers, protractors and charts with instruction manual. Use it once and wonder how you did without it! \$40 ppd. To order or request information:

Soft Wares Inc., 19 Monroe Dr., Williamsville, NY 14221, U.S. 800/848-5500, NY 800/447-5500, Ext. 50

MacBackup™

The quickest & easiest way to make exact duplicates of your original software. You'll never see "Insert your master," because this duplicate is your master. Loads many protected programs to hard drives. For 128K, 512K, 1 or 2 drives. You can prevent destruction to your original software for only \$69.95 + shipping.

Practical Computer Applications, Inc., 1305 Jefferson Hwy., Champlin, MN 55316, 612/427-4789

The Macworld Directory is a comprehensive listing, by category, of products and services available for the Apple Macintosh. It provides advertisers with a low-cost advertising alternative and our readers with an easy reference guide.

FORMAT: The standard format includes a product ID, a 300-character descriptive ad, and a company name, address, and telephone number.

Advertisers may choose among categories already in use, or they may create their own. Display advertisers can cross-reference their current ad to the Macworld Directory for increased exposure.

RATES: Listings are accepted for a three-time consecutive insertion at a rate of \$726. We offer a six-time insertion at \$1230 that reflects a 15% frequency discount. Listings must be prepaid (except for established display advertisers) upon submission of ad copy. Checks, money orders, Visa, and MasterCard are accepted.

DEADLINE: For copy deadlines and further information please contact Niki Stranz, your Macworld Directory Account Manager, at 415/861-3861 or 800/872-7800 (800/872-7808 in California). Please send copy and prepayment to the Macworld Directory, 555 De Haro St., San Francisco, CA 94107.

Get more data on products
you're interested in—
simply return this card today.
There's no cost.
And no obligation.

It's easy to get more information on products advertised in Macworld.
Here's how:

- Print or type your name and address in the spaces provided, and answer the questions that apply to you or your company. (These questions help us to better meet your needs and the needs of our advertisers.)
- Circle the number(s) on the card that corresponds to the reader service number(s) for the product(s) in which you're interested. For your convenience, the reader service number appears in the ad and in the Advertiser Index.
- Detach the card from the magazine, fold, seal with tape (please do not staple), apply first-class postage, and mail. Literature on the products you're interested in will be mailed to you directly from the manufacturer, free of charge.

MacLink

... the "intelligent" link between
your Macintosh and the IBM PC

MacLink allows you to translate spreadsheet and word-processing files between the Macintosh and the IBM PC... easily and quickly.

Now you can translate spreadsheets between Lotus on the PC and Multiplan on the Mac... including formulas, column formats, and functions.

And MacLink allows you to transfer any other type of file between the two machines as well... including binary, CSV, SYLK, text, WKS (Jazz/Excel), and Word files.

MacLink's integrated communications and unique translators

Unique PC ↔ Mac Translators!

And you can translate documents between Wordstar, Multimate or Displaywrite on the PC and MacWrite on the Mac... including margin settings, paragraphing, columns, and print styles.

work via modems or with an optional PC to Mac cable.

The cost is just \$125: This includes the MacLink manual, and a MacLink disk for both the PC and the Mac. \$155 with cable.

DataViz, Inc. — 16 Winfield Street — Norwalk, CT 06855

MACSNAP™

BLOW UP YOUR MACINTOSH WITHOUT GETTING BURNED

**Get explosive growth in productivity
with the new memory upgrade from DOVE Computer.**

All you do is give your local computer dealer ten minutes to literally "snap" our RAM expansion board into your Macintosh*. No trace cutting. No soldering. In fact, you can even do it yourself with a MacSnap* User Kit, also available from your dealer.

Upgrade your 512K Mac to 1.0 or 2.0 full megabytes of RAM. Or take your 128K to 1.5 megs. For all the speed and productivity you'll ever need.

Using all the extra speed and capability is a snap, too. Because you get complete, easy-to-understand documentation and a quality upgrade designed to improve your productivity. MacSnap is fully compatible with all Macintosh system software, but it doesn't stop there. It comes with its own performance software package that includes Switcher* and a user-configurable RAMdisk. This allows you

to fully utilize your expanded memory. With up to 60 percent more speed than a 512K Mac, MacSnap speeds up those normally cumbersome programs like EXCEL* and JAZZ* and even allows them to run simultaneously on a single disk drive. In addition, MacSnap's "print spooling" capability lets you print one document while working on another.

MacSnap is fully compatible with HyperDrive* and Apple's new 128K ROM, too!

So go ahead. Create elaborate spreadsheets. Increase the size of your documents. Construct complex graphics and page layouts. Manage up to eight applications at once. All at RAM speed.

For more information, call DOVE COMPUTER toll-free. Or ask your dealer to call.

Unlocking spreadsheets, finding files through BASIC, looking at PostScript, and other tips

Edited by Jim Heid

This month: the results of a test comparing Microsoft BASIC 2.1 with Addison-Wesley's True BASIC, information on Apple's revised Imagewriter system file, a way to unlock protected Multiplan and Excel worksheets using MacTools, and a technique for creating PostScript files for transmission to a LaserWriter. If you like to program, read about a useful subroutine that searches installed floppy disks for a specific file. For Macintosh owners who also use Radio Shack's Model 100 portable computer, a print-formatting program improves the Model 100's operation with the Imagewriter. Finally, some undocumented features of Apple's Font/DA Mover and Finder.

Tried and True BASIC

Addison-Wesley recently released the Macintosh version of True BASIC, a version of BASIC created by John Kemeny and Thomas Kurtz, the Dartmouth professors who developed the first BASIC in 1964. I ran some benchmark programs on both True BASIC and Microsoft BASIC (MBASIC) and found that True BASIC is considerably faster.

My first test program was a prime number-generating program that measures a language's integer arithmetic and array-handling performance. True BASIC completed the program in 10.5 seconds, while both the decimal and binary versions of MBASIC 2.1 took 71 seconds. The second test was a simple FOR...NEXT loop that counted from 1 to 100,000. True BASIC completed the count in 20 seconds, versus MBASIC 2.1's 53 seconds.

True BASIC finished first primarily because it compiles a BASIC program into a compact intermediate code and then interprets that code when you run the program. MBASIC, by contrast, simply interprets the original code, a slower process.

Driving the Imagewriter

Many Microsoft Word users have expressed dissatisfaction with Word's printing speed on the Imagewriter. The program seems to stop every few lines to access the disk and assemble more of the page; the program also hesitates before advancing to the bottom of a page when finished.

When Apple released Finder 4.1 along with the System Update application, I noticed that the Imagewriter driver's icon differed from the icon that appeared in Word's System Folder. Substituting the new driver for the old increased Word's printing speed significantly.

*Michael G. Munro
Burke, Virginia*

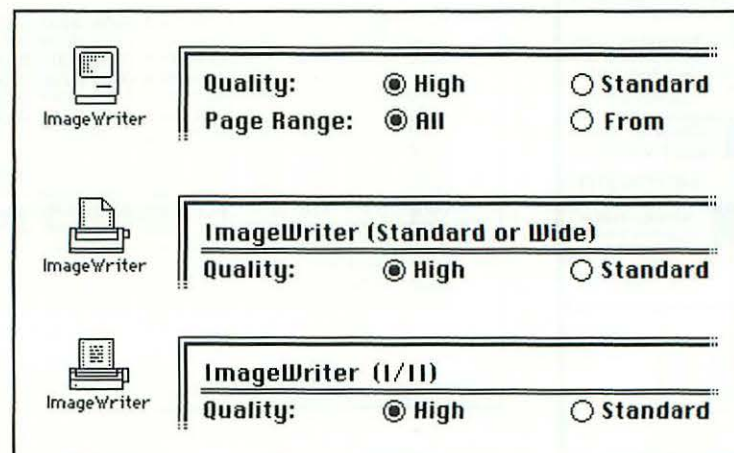

You're right. According to my stopwatch, Word took 180 seconds to print a test page using the old Imagewriter driver, and 159 seconds using the new driver. The speed difference is greater when you print a page that's only partially full.

The new driver is available free of charge from Apple dealers. To replace the old driver, simply copy the new driver to the Word system disk and click OK when asked "Replace items with the same names with the selected items?" "Imagewriter Scorecard" shows how to tell one driver from another.—Ed.

Picking the Spreadsheet's Lock

Recently, during the course of my work at an accounting firm, I encountered a situation in which a Microsoft Multiplan worksheet had been protected by a password, and the employee who created the file had quit without telling anyone the password.

(continues on page 184)

Imagewriter Scorecard

The early version of the Imagewriter driver uses the Mac system icon, while the version released with Finder 4.1 has its own Imagewriter icon. Version 2.0 of the latter version, which works with the ImageWriter II as well, displays an Imagewriter icon with text on the printout.

(continued from page 179)

After some experimentation, I discovered that there is a flag in a spreadsheet file that indicates password protection. You can change this flag and remove the protection using a disk editor such as *MacTools*. The same indicator flag is present in *Microsoft Excel* files, though its location is different.

- Start *MacTools* and insert the disk containing the protected worksheet.
- Highlight the protected file and choose ViewEdit from the File menu.
- Use the horizontal scroll bar to locate the sector containing the protection flag. In *Multiplan* the flag is in block 3, part A, position 0079; in *Excel* it's in block 1, part B, position 0175 (see "Waiving the Flag"). The indicator 00 denotes no password protection, while 01 indicates protection. To remove the protection, select the 1 in the flag with the cursor and type 0.

• Check your work to make sure you altered the correct byte, then choose Write Block from the Misc menu.

Randal B. McDonald, Jr.
New York, New York

Inside PostScript

If you have a LaserWriter-equipped System file, you can see the PostScript statements that describe what you print. First, open the application and create a document or a drawing. Using the Choose Printer desk accessory, select the LaserWriter as the current printer, and then choose Print. Immediately after clicking OK in the print dialog box, hold down the \mathbb{H} and F keys. Instead of the usual "Looking for LaserWriter" message, the line "Creating PostScript File"

(continues on page 182)

VersaTerm

Terminal Emulation and Communications Programs for the MacintoshTM

The Professional VersaTerm Line of Software has a solution for your needs.

VersaTerm-PROTM New!

The most Complete and Powerful Tektronix 4105 Macintosh Terminal Emulator on the market today!

Terminal Emulation

- Tektronix 4105
- DEC VT100
- Tektronix 4014
- Data General D200

File Transfer

- TEXT
- MacTerminalTM XModem
- Text XModem Protocol
- MacBinary XModem
- Text/Binary Kermit Protocol

Features

- Create TekPrint, MacDraw, MacPaint and MacWrite documents from memory.
- True interactive Zoom and Pan in memory with either the 4105 or 4014 graphics.
- Fully supports all text and graphics features of the Tektronix 4105.
- The 4105 dialog can either be a separate window or text overlaying the graphics.
- Very high quality, full page graphics may be printed on either the ImageWriter or LaserWriter.
- Color output supported with ImageWriter II.
- Supports 4105 host and keyboard Macros.
- Copy either text or graphics to the Clipboard.
- Supports ALL Auto-Dial Modems.
- Supports the Hard Disk 20 with HFS.

Requires a 512K Mac, Mac-XL or Mac Plus, and optionally an ImageWriter (II) or LaserWriter printer and numeric keypad.

List Price \$295

Special upgrade price for registered VersaTerm Owners.

VersaTermTM

Terminal Emulations

- DEC VT100
- Tektronix 4014
- Data General D200

File Transfer

- TEXT
- MacTerminalTM XModem
- Text XModem Protocol
- MacBinary XModem
- Text/Binary Kermit Protocol

"This solid program (VersaTerm) should be looked at by all power users, especially those with VT100 and Tektronix emulation needs."

—MacUser, Premiere Issue '85

Create TekPrint, MacPaint and MacWrite documents.

Graphics and Text terminal emulation and communications.

- Copy a text selection to the Clipboard.
- Up to 384 lines of text saved in memory.
- Supports ALL Auto-Dial Modems.
- Supports the Hard Disk 20 with HFS.
- Log text directly to a printer.
- Move the cursor within an editor using the mouse.
- Full screen Tek cross-hairs.
- Very High character throughput, up to 9600 baud.

Requires a 128K or 512K Mac, Mac-XL or Mac Plus.

List Price \$ 99

TekPrintTM

Requires a 128K or 512K Mac, Mac-XL or Mac Plus.

Zoom, Pan, Rotate and Print High Resolution Tektronix Graphics on the ImageWriter or LaserWriter Printer. Create MacDraw Documents. Use VersaTerm to preview and create TekPrint documents.

Registered VersaTerm Owners including a free VersaTerm update.

List Price \$ 79

VersaTerm PlusTM

Check our new VersaTerm-PRO!

VersaTerm Plus Package including VersaTerm and TekPrint

List Price \$175

VersaTerm-HPTM

Requires a 128K or 512K Mac, Mac-XL or Mac Plus.

Same general features as standard VersaTerm, except the VT100 emulation is replaced with a Hewlett Packard 2621 emulation.

List Price \$ 99

Waiving the Flag

You can remove the protection from an Excel or Multiplan worksheet with a disk editor such as *MacTools*. In Excel (top), the protection flag is located in block 1, part B, position 0175; in Multiplan (bottom), it's in block 3, part A, position 0079. To avoid damaging a worksheet by altering the wrong bytes, modify a copy of the original.

"We will match any mail order price in this issue."

We won't charge you for shipping or handling, nor will we penalize you for using a credit card. We'll support, service and warranty everything we sell and stand behind it 100%.

Open Window

(continued from page 180)

is displayed. This key sequence creates a file called PostScript that you can examine with *MacWrite* or *Word*.

Jeff Koch

Maple Valley, Washington

This technique could be useful for transmitting PostScript data to a typesetter over a modem or to minimize rental charges at a LaserWriter-equipped copy shop. —Ed.

Finding Files in MBASIC

I recently wrote an MBASIC 2.1 program that accessed numerous files. Unfortunately, unless all the files were on the default drive, the program would crash with a "File not found" error. Rather than coding the volume names directly into the program (as in OPEN "MyDisk:MyFile"), I wrote a subroutine that uses the PEEK function to obtain disk names directly from memory (see "Volume Search Listing"). The subroutine searches disks in the internal and external drives for the specified file. The disk containing MBASIC must be in the internal drive.

Robert Hall

Seattle, Washington

Printing in MacPaint

I wanted to print several copies of a *MacPaint* party invitation, but I realized that the program doesn't display the usual print dialog box where you specify the number of copies. I came up with a simple solution to avoid repeating the Print command for each copy I wanted to print: save the document on a disk with plenty of free space and use the Finder's Duplicate command to make as many copies of the document as you want to print. Select all the copies and choose Print from the Finder's File menu. Each copy will be printed in turn.

Rob McDaniel

Belleville, Illinois

Model 100 and the Imagewriter

Gordon Haig's tip on making a cable to connect Radio Shack's Model 100 to the Imagewriter was a big help (see "More on the Model 100," *Open Window*, December 1985). My cable works fine, but the alignment of text on the page is terrible. There's no left margin, and the Imagewriter prints text across the perforations at the bottom of each page.

(continues on page 184)

```
REM *** Program to search disk volumes for file.
REM *** Written by Robert J. Hall in Microsoft Basic 2.1(b), 12/1/85
ON ERROR GOTO ErrorFix
VolumeName$="" {Assume default drive volume}
INPUT "What file do you want to locate";FileName$
' (Set pointer to default volume memory location before each file operation
DefPtr=&H352
REM ** Replace the line below with your OPEN or CHAIN statement
FILES VolumeName$+FileName$ {Can use OPEN/CHAIN here instead
STOP:END

ErrorFix:
IF ERR=53 THEN GOSUB Volume: {Type 53 File not found error}
RESUME

Volume:
VolPtr=2*24*PEEK(DefPtr)+2*16*PEEK(DefPtr+1)
VolPtr=VolPtr+2*8*PEEK(DefPtr+2)+PEEK(DefPtr+3)
' (Now have the address of volume pointer. If no volume found, show error.
VolumeName$=""
IF VolPtr=0 THEN ERROR 53: {Out of volumes: File not Found}
VLength=PEEK(VolPtr+44): {Get length of volume name}
FOR I%=1 TO VLength
VolumeName$=VolumeName$+CHR$(PEEK(VolPtr+44+I%))
NEXT I%
VolumeName$=VolumeName$+" "
DefPtr=VolPtr: {Set pointer for next volume}
RETURN
```

Volume Search Listing

This MBASIC subroutine uses the PEEK function to obtain disk names directly from memory, eliminating the need to code disk names directly into a program. For the subroutine to work properly, the MBASIC disk must be in the internal drive.

The right connection for the Mac Plus

Now you can connect your Mac Plus or Macintosh™ to a printer (including ImageWriter™ II), modem (including Apple® Personal Modem) or disk drive at an affordable price. Our Apple equivalent custom *molded* cables match the host computer in style and color and include thumbscrews.

Similar cables are also available for the Apple IIe, IIc and IBM® PC.

N² Products also manufactures custom cables for OEM applications.

Mac Plus Cables	Retail Price
Imagewriter II	\$27.95
Apple Personal Modem	\$27.95
SCSI Disk Drive	\$32.95
Mac Plus to Macintosh Adaptor*	\$19.95

Macintosh Cables	Retail Price
Imagewriter II	\$27.95
Apple Personal Modem	\$27.95
Serial Printer	\$29.95
Modem	\$29.95

*Permits Mac Plus, modem, and printer ports to mate with standard Macintosh (DB-9) cable.

All items are available from stock.

512K Upgrades

- 3 Year Limited Warranty (Extended Warranties Available)
- No Soldering of RAMs
- Fast Service (Overnight if desired)

We do not solder or desolder any of your RAM chips when we do your 512K upgrade. Because your board is not heated 512 times we can offer the best warranty available. Our upgrade uses an integrated circuit board that is soldered into seven empty holes in Mac's logic board. This means that there are no jumper wires exposed and that only a single trace needs to be cut. The RAMs are attached by use of a special socket that connects to the existing pins. 1.5MB upgrades are also available.

How to Place Your Order

We accept MasterCard, Visa, American Express, COD and Purchase orders from established accounts. All shipping is done by UPS Second Day Air. No extra shipping charge for foreign customers.

512K Kit

No desoldering or soldering of RAMs!

If you enjoy the satisfaction of doing things yourself, then our Upgrade kit might be just what you are looking for.

What You Get

Our kit comes with 256K DRAMS, special sockets, integrated circuit board, Guided Tour Video Tape, a MacOpener Tool Kit, Soldering-Desoldering Tools, instructions, and our support for completing your Upgrade.

Comments

It was not necessary to desolder 256 chip pins, clean them, and resolder in sockets. You have a great idea in your upgrade kit. Edward Croop

The MACohm update is the best documented and supported product I have ever purchased. It is nice to know that good companies are beginning to emerge in the computer after-market. Thanks again and I'll be back. Robert L. Harris

Instructions were excellent—as good as I've ever read. Jim Ackil

Much better than I had expected (and I expected it to be very good). Mark Cochran

Light years ahead of any other upgrades for the VIDEO, book, materials, and tools. Martin Wixted

Directions were specific. Your video prepared me well—practice made it easy. S. Hindes

(continued from page 182)

The program in "Model 100 Printing" solves these problems by sending commands to the Imagewriter to control margins and pagination. Type the program into the Model 100 and save it. Follow these steps when you want to print files on the Imagewriter.

- Connect the Model 100 to the Imagewriter. Turn the Imagewriter on and advance the paper past the top rollers about 3/4 inch.

- Run the BASIC program.
- Download the text files to be printed using the Model 100's Telcom program (follow the instructions in the December 1985 *Open Window*).

With my program, the Imagewriter provides an 8-character left margin and prints 52 lines of text before advancing to the next page. You can print any number of files in succession without running the program again; the Imagewriter remembers the page specifications until you turn it off.

Robert R. Callahan
Chico, California

Looking for Bugs

Finally, some program pesticide. Several readers have written to complain about bugs in Gerald Keep's Banner Maker program (*Open Window*, November 1985). The program runs properly as printed; if you're having trouble, carefully check your listing for typographical errors, and remember that Microsoft BASIC's List win-

Model 100 Printing

For improved formatting when printing with Radio Shack's Model 100 and the Imagewriter, type this program into the Model 100 and run it before printing. The program sets up the Imagewriter to provide an 8-character left margin and print 52 lines per page.

dow must be closed for the program to operate. If you don't find any typographical errors, send us a hard copy of the listing you typed along with a detailed description of the problem. If BASIC displayed any error messages, note them along with the lines that generated them.

We've also received word of a bug in the Microsoft BASIC program Concentrate that appeared in last December's column. Line 21 of the program, which reads `LI=1`, should be deleted.

Open Window offers tips to help you use the Macintosh more efficiently. Submitted by readers, industry experts, and the Macworld staff, items in this department cover various aspects of the Mac and its software, from applications to programming routines to undocumented features.

Send us a useful tip or even a short program that performs a function or creates a diversion, and we'll share it with our readers. We pay \$25 to \$100 for each Open Window item published. Please submit contributions on disk (which will be returned) along with a brief description on paper to Open Window, Macworld, 555 De Haro St., San Francisco, CA 94107, or send your contribution electronically to CompuServe 70370,702 or The Source BCW440. All published submissions become the property of Macworld. □

Now with BPI Systems™, you've got a full-time accountant on hand.

When BPI Systems introduced General Accounting, it revolutionized the way businesses automate their accounting. When Apple® introduced Macintosh™, it revolutionized automation with one-touch personal computing.

Now BPI introduces General Accounting for Macintosh, so Mac users can point and click their way to automated, one-touch accounting.

To take full advantage of Mac's easy-to-use features, BPI General Accounting uses everyday business language and pull-down menus, with an interface consistent with Mac's. And it supports Mac's Mouse functions, so you've got a full-time accountant right at your finger tip.

Of course, General Accounting includes all of the features that made BPI a leader in business

accounting software—Accounts Payable, Accounts Receivable and Payroll subsidiary ledgers, plus a flexible chart of accounts, automatic check writing, and comprehensive financial reports.

But hurry. BPI is offering General Accounting for Macintosh at an introductory retail price of \$425.

So with a touch of a button you can find out exactly how your business is doing, instead of how it was.
